Superconductivity

Charles P. Poole, Jr.

Horacio A. Farach

Richard J. Creswick

Contents

Preface xiii

1 Properties of the Normal State

I. Introduction 1
II. Conduction Electron Transport 1
III. Chemical Potential and Screening 4
IV. Electrical Conductivity 5
V. Frequency Dependent Electrical Conductivity 6
VI. Electron–Phonon Interaction 7
VII. Resistivity 7
VIII. Thermal Conductivity 8
IX. Fermi Surface 8
X. Energy Gap and Effective Mass 10
XI. Electronic Specific Heat 11
XII. Phonon Specific Heat 12
XIII. Electromagnetic Fields 14
XIV. Boundary Conditions 15
XV. Magnetic Susceptibility 16
XVI. Hall Effect 18
Further Reading 20
Problems 20

2 The Phenomenon of Superconductivity

I. Introduction 21
II. A Brief History 21
III. Resistivity 23
A. Resistivity above T_c 24
B. Resistivity Anisotropy 26
C. Anisotropy Determination 30

D. Sheet Resistance of Films: Resistance Quantum 31
IV. Zero Resistance 33
A. Resistivity Drop at T_c 33
B. Persistent Currents below T_c 34
V. Transition Temperature 35
VI. Perfect Diamagnetism 38
VII. Fields inside a Superconductor 41
VIII. Shielding Current 42
IX. Hole in Superconductor 44
X. Perfect Conductivity 47
XI. Transport Current 48
XII. Critical Field and Current 49
XIII. Temperature Dependences 51
XIV. Concentration of Super Electrons 53
XV. Critical Magnetic Field Slope 53
XVI. Critical Surface 54
Further Reading 57
Problems 57

3 The Classical Superconductors

I. Introduction 59
II. Elements 60
III. Physical Properties of Superconducting Elements 63
IV. Compounds 66
V. Alloys 66
VI. Miedema's Empirical Rules for Alloys 71
VII. Compounds with the NaCl Structure 73
VIII. Type A15 Compounds 74
IX. Laves Phases 77
X. Chevrel Phases 78
XI. Heavy Electron Systems 80
XII. Charge-Transfer Organics 84
XIII. Chalcogenides and Oxides 86
XIV. Barium Lead-Bismuth Oxide Perovskite 87
XV. Barium-Potassium Bismuth-Oxide Cubic Perovskite 87
XVI. Buckminsterfullerenes 87
XVII. Borocarbides 88
Further Reading 89
Problems 89

4 Thermodynamic Properties

I. Introduction 91
II. Specific Heat above T_c 92
III. Discontinuity at T_c 96
IV. Specific Heat below T_c 97
V. Density of States and Debye Temperature 98
VI. Thermodynamic Variables 99
VII. Thermodynamics of a Normal Conductor 100
VIII. Thermodynamics of a Superconductor 101
IX. Superconductor in Zero Field 105
X. Superconductor in a Magnetic Field 106
XI. Normalized Thermodynamic Equations 111
XII. Specific Heat in a Magnetic Field 112
XIII. Evaluating the Specific Heat 114
XIV. Order of the Transition 116
XV. Thermodynamic Conventions 117
XVI. Concluding Remarks 117
Further Reading 118
Problems 118

5 Ginzburg-Landau Theory

I. Introduction 121
II. Order Parameter 122
III. Ginzburg-Landau Equations 123
IV. Zero-Field Case Deep inside Superconductor 124

V. Zero-Field Case near Superconductor Boundary 126
VI. Fluxoid Quantization 127
VII. Penetration Depth 128
VIII. Critical Current Density 132
IX. London Equations 133
X. Exponential Penetration 133
XI. Normalized Ginzburg–Landau Equations 137
XII. Type I and Type II Superconductivity 139
XIII. Upper Critical Field B_{c2} 140
XIV. Quantum Vortex 142
A. Differential Equations 142
B. Solutions for Small Distances 143
C. Solutions for Large Distances 144
Further Reading 146
Problems 147

6 BCS Theory

I. Introduction 149
II. Cooper Pairs 150
III. BCS Order Parameter 152
IV. Generalized BCS Theory 154
V. Singlet Pairing in a Homogeneous Superconductor 160
VI. Self-Consistent Equation for the Energy Gap 163
VII. Response of a Superconductor to a Magnetic Field 168
Further Reading 171

7 Perovskite and Cuprate Crystallographic Structures

I. Introduction 173
II. Perovskites 174
A. Cubic Form 174
B. Tetragonal Form 175
C. Orthorhombic Form 176
D. Planar Representation 178
III. Cubic Barium Potassium Bismuth Oxide 178
IV. Barium Lead Bismuth Oxide 179
V. Perovskite-Type Superconducting Structures 179
VI. Aligned $YBa_2Cu_3O_7$ 182
A. Copper Oxide Planes 182
B. Copper Coordination 184
C. Stacking Rules 184
D. Crystallographic Phases 184
E. Charge Distribution 185
F. YBaCuO Formula 186
G. $YBa_2Cu_4O_8$ and $Y_2Ba_4Cu_7O_{15}$ 186
VII. Body Centering 187
VIII. Body-Centered La_2CuO_4 and Nd_2CuO_4 188
A. Unit Cell Generation of La_2CuO_4 (T Phase) 188
B. Layering Scheme 190
C. Charge Distribution 191
D. Superconducting Structures 192
E. Nd_2CuO_4 Compound (T′ Phase) 193
F. $La_{2-x-y}R_xSr_yCuO_4$ Compounds (T* Phase) 194
IX. Body-Centered BiSrCaCuO and TlBaCaCuO 194
A. Layering Scheme 194
B. Nomenclature 195
C. Bi–Sr Compounds 196
D. Tl–Ba Compounds 197
E. Modulated Structures 198
F. Aligned Tl–Ba Compounds 198
G. Lead Doping 198
X. Aligned HgBaCaCuO 198
XI. Buckminsterfullerenes 201
XII. Symmetries 203
XIII. Crystal Chemistry 204
XIV. Comparison with Classical Superconductor Structures 206
XV. Conclusions 206
Further Reading 207
Problems 207

8 Hubbard Models and Band Structure

I. Introduction 209
II. Reciprocal Space and Brillouin Zone 210
III. Free Electron Bands in Two Dimensions 211
IV. Nearly Free Electron Bands 214
V. Fermi Surface in Two Dimensions 215
A. Fermi Surface 215
B. Closed Fermi Surface 216
C. Open Fermi Surface 216
VI. Electron Configurations 217
A. Electronic Configurations and Orbitals 218
B. Tight–Binding Approximation 220
VII. Hubbard Models 222
A. Wannier Functions and Electron Operators 223
B. One-State Model 223
C. Electron-Hole Symmetry 224
D. Half-Filling and Antiferromagnetic Correlations 225
E. t-J Model 226
F. Resonant-Valence Bonds 227
G. Spinons, Holons, Slave Bosons, Anyons, and Semions 228
H. Three-State Model 229
I. Energy Bands 230
J. Metal–Insulator Transition 233
VIII. Transition Metal Elements 234
IX. A-15 Compounds 234
X. Buckminsterfullerenes 236
XI. $BaPb_{1-x}Bi_xO_3$ System 237
XII. $Ba_{1-x}K_xBiO_3$ System 238
XIII. Band Structure of $YBa_2Cu_3O_7$ 239
A. Energy Bands and Density of States 240
B. Fermi Surface: Plane and Chain Bands 242
C. Charge Distribution 243
XIV. Band Structure of $(La_{1-x}Sr_x)_2CuO_4$ 243
A. Orbital States 245
B. Energy Bands and Density of States 245
C. Brillouin Zone 246
D. Fermi Surface 247
E. Orthorhombic Structure 248
XV. Bismuth and Thallium Compounds 249
XVI. Mercury Compounds 250
XVII. Fermi Liquids 255
XVIII. Fermi Surface Nesting 256
XIX. Charge-Density Waves, Spin-Density Waves, and Spin Bags 256
XX. Mott-Insulator Transition 257
XXI. Anderson Interlayer Tunneling Scheme 258
XXII. Comparison with Experiment 259
XXIII. Discussion 261
Further Reading 263
Problems 263

9 Type II Superconductivity

I. Introduction 265
II. Internal and Critical Fields 266
A. Magnetic Field Penetration 266
B. Ginzburg–Landau Parameter 268
C. Critical Fields 270
III. Vortices 273
A. Magnetic Fields 274
B. High-Kappa Approximation 275
C. Average Internal Field and Vortex Separation 277
D. Vortices near Lower Critical Field 278
E. Vortices near Upper Critical Field 279
F. Contour Plots of Field and Current Density 280
G. Closed Vortices 281

IV. Vortex Anisotropies 282
A. Critical Fields and Characteristic Lengths 284
B. Core Region and Current Flow 284
C. Critical Fields 285
D. High-Kappa Approximation 289
E. Pancake Vortices 289
F. Flux Trapping 291
V. Individual Vortex Motion 291
A. Vortex Repulsion 292
B. Pinning 294
C. Equation of Motion 296
D. Onset of Motion 296
E. Magnus Force 297
F. Steady-State Vortex Motion 297
G. Intrinsic Pinning 298
H. Vortex Entanglement 299
VI. Flux Motion 299
A. Flux Continuum 299
B. Entry and Exit 300
C. Two-Dimensional Fluid 300
D. Dimensionality 300
E. Solid and Glass Phases 301
F. Moving Flux 302
G. Transport Current in a Magnetic Field 303
H. Dissipation 304
I. Magnetic Phase Diagram 304
VII. Fluctuations 305
A. Thermal Fluctuations 305
B. Characteristic Length 306
C. Entanglement of Flux Lines 306
D. Irreversibility Line 306
E. Kosterlitz–Thouless Transition 308
VIII. Quantized Flux 308
Further Reading 310
Problems 310

10 *Magnetic Properties*

I. Introduction 313
II. Susceptibility 314
III. Magnetization and Magnetic Moment 314
IV. Magnetization Hysteresis 316
V. Zero Field Cooling and Field Cooling 317
VI. Granular Samples and Porosity 320
VII. Magnetization Anisotropy 321
VIII. Measurement Techniques 322
IX. Comparing Susceptibility and Resistivity Results 323
X. Ellipsoids in Magnetic Fields 324
XI. Demagnetization Factors 325
XII. Measured Susceptibilities 326
XIII. Sphere in a Magnetic Field 327
XIV. Cylinder in a Magnetic Field 329
XV. ac Susceptibility 331
XVI. Temperature-Dependent Magnetism 333
A. Pauli Paramagnetism 334
B. Paramagnetism 334
C. Antiferromagnetism 336
XVII. Pauli Limit and Upper Critical Fields 337
XVIII. Ideal Type II Superconductor 339
XIX. Magnets 341
Further Reading 341
Problems 342

11 *Intermediate and Mixed States*

I. Introduction 343
II. Intermediate State 344
III. Surface Fields and Intermediate-State Configuration 344
IV. Type I Ellipsoid 346
V. Susceptibility 348
VI. Gibbs Free Energy for the Intermediate State 348
VII. Boundary-Wall Energy and Domains 350
VIII. Thin Film in Applied Field 352

IX. Domains in Thin Films 354
X. Current-Induced Intermediate State 357
XI. Mixed State in Type II Superconductors 362
Further Reading 362
Problems 362

12 *Critical States*

I. Introduction 365
II. Current–Field Relations 366
A. Transport and Shielding Current 366
B. Maxwell Curl Equation and Pinning Force 366
C. Determination of Current–Field Relationships 368
III. Critical-State Models 368
A. Requirements of Critical-State Model 368
B. Examples of Models 368
C. Model Characteristics 369
IV. Fixed Pinning Model 369
V. Bean Model 371
A. Low-Field Case 371
B. High-Field Case 372
C. Transport Current 374
D. Circular Cross Section 375
E. Combining Screening and Transport Current 376
F. Pinning Strength 377
VI. Reversed Critical States and Hysteresis 378
A. Reversing Field 379
B. Average Internal Field 381
C. Magnetization 383
D. Hysteresis Loops 386
E. Magnetization Current 388
F. Critical Currents 392
G. Reversing Fields with Transport Currents 393
VII. Kim Model 393
VIII. Comparison of Critical-State Models with Experiment 397
IX. Concluding Remarks 399
Further Reading 400
Problems 400

13 *Tunneling*

I. Introduction 401
II. The Phenomenon of Tunneling 401
A. Conduction-Electron Energies 402
B. Types of Tunneling 403
III. Energy Level Schemes 403
A. Semiconductor Representation 404
B. Boson Condensation Representation 404
IV. Tunneling Processes 404
A. Conditions for Tunneling 405
B. Normal Metal Tunneling 405
C. Normal Metal-to-Superconductor Tunneling 405
D. Superconductor-to-Superconductor Tunneling 407
V. Quantitative Treatment of Tunneling 408
A. Distribution Function 408
B. Density of States 410
C. Tunneling Current 410
D. N–I–N Tunneling Current 412
E. N–I–S Tunneling Current 412
F. S–I–S Tunneling Current 414
G. Nonequilibrium Quasiparticle Tunneling 417
VI. Tunneling Measurements 418
A. Weak Links 418
B. Experimental Arrangements for Measuring Tunneling 418
C. N–I–S Tunneling Measurements 420
D. S–I–S Tunneling Measurements 421
E. Energy Gap 421
F. Proximity Effect 424

G. Even–Odd Electron Number Effect 426
VII. Josephson Effect 426
A. Cooper Pair Tunneling 426
B. dc Josephson Effect 426
C. ac Josephson Effect 429
D. Driven Junctions 430
E. Inverse ac Josephson Effect 431
F. Analogues of Josephson Junctions 434
VIII. Magnetic Field and Size Effects 437
A. Short Josephson Junction 438
B. Long Josephson Junction 442
C. Josephson Penetration Depth 444
D. Two-Junction Loop 445
E. Self-Induced Flux 446
F. Junction Loop of Finite Size 448
G. Ultrasmall Josephson Junction 449
H. Arrays and Models for Granular Superconductors 451
I. Superconducting Quantum Interference Device 451
Further Reading 452
Problems 452

14 *Transport Properties*

I. Introduction 455
II. Inductive Superconducting Circuits 455
A. Parallel Inductances 455
B. Inductors 457
C. Alternating Current Impedance 457
III. Current Density Equilibration 459
IV. Critical Current 461
A. Anisotropy 461
B. Magnetic Field Dependence 461
V. Magnetoresistance 464
A. Applied Fields above T_c 464
B. Applied Fields below T_c 465
C. Fluctuation Conductivity 467
D. Flux Flow Effects 468
VI. Hall Effect 470
A. Hall Effect above T_c 470
B. Hall Effect below T_c 473
VII. Thermal Conductivity 473
A. Heat and Entropy Transport 474
B. Thermal Conductivity in the Normal State 475
C. Thermal Conductivity below T_c 477
D. Magnetic Field Effects 478
E. Anisotropy 478
VIII. Thermoelectric and Thermomagnetic Effects 479
A. Thermal Flux of Vortices 480
B. Seebeck Effect 481
C. Nernst Effect 484
D. Peltier Effect 487
E. Ettinghausen Effect 487
F. Righi–Leduc Effect 489
IX. Photoconductivity 490
X. Transport Entropy 493
Further Reading 493
Problems 493

15 *Spectroscopic Properties*

I. Introduction 495
II. Vibrational Spectroscopy 496
A. Vibrational Transitions 496
B. Normal Modes 497
C. Soft Modes 497
D. Infrared and Raman Active Modes 497
E. Kramers–Kronig Analysis 499
F. Infrared Spectra Results 501
G. Light-Beam Polarization 504
H. Raman Spectra Results 505
I. Energy Gap 505
III. Optical Spectroscopy 507

IV. Photoemission 510
A. Measurement Technique 512
B. Energy Levels 513
C. Core-Level Spectra 513
D. Valence Band Spectra 516
E. Energy Bands and Density of States 517
V. X-ray Absorption Edges 518
A. X-ray Absorption 518
B. Electron-Energy Loss 522
VI. Inelastic Neutron Scattering 524
VII. Positron Annihilation 528
VIII. Magnetic Resonance 529
A. Nuclear Magnetic Resonance 530
B. Quadropole Resonance 536
C. Electron-Spin Resonance 539
D. Nonresonant Microwave Absorption 540
E. Microwave Energy Gap 541
F. Muon Spin Relaxation 543
G. Mössbauer Resonance 544
Further Reading 546
Problems 546
