SCHAUM'S SOLVED PROBLEMS SERIES

2000 SOLVED PROBLEMS IN ELECTROMAGNETICS

- Learn the best strategies for solving tough problems in step-by-step detail.
- Prepare effectively for exams and save time in doing homework problems.
- Choose from the largest selection of solved problems yet published on this subject.
- Use the index to quickly locate the types of problems you most need help with.
- Save this book for reference in other courses and even for your professional library.

SYED A. NASAR

CONTENTS

Chapter 1 VECTOR ANALYSIS 1

Vectors and Scalars / Unit Vectors / Scalar Components and Vector Components / Vectorial Areas / Dot Product / Cross Product / Vector Fields and Scalar Fields / The Gradient Vector / Line Integrals / Divergence and the Divergence Theorem / Curl and Stokes' Theorem / Potential Functions and Conservative Fields

Chapter 2 ELECTROSTATICS 35

Charge Distributions / Coulomb's Law / The E-Field / Superposition Principle / Electric Flux and Gauss' Law / Induced Charge / Voltage / Electric Dipoles / Dielectrics and Polarization / Permittivity / Conditions at an Interface / Potential Energy of a Charge Configuration / Equipotentials and Field Lines / Capacitance / Poisson's and Laplace's Equations / Solutions by Separation of Variables / Method of Images

Chapter 3 MAGNETOSTATICS 95

Ampère's Force Law / Biot–Savart Law / Magnetic Induction / Magnetic Field Intensity / Ampère's Circuital Law / Magnetic Flux / Magnetic Dipole Moments / Torque on a Current Loop / Magnetic Vector and Scalar Potentials / Conditions at an Interface / Bound Currents and Magnetization / The Lorentz Force / Magnetic Circuits / Mutual Inductance / Internal Inductance / Magnetostatic Force

Chapter 4 MAXWELL'S EQUATIONS 137

Faraday's Law of Induced EMF / Lenz's Law / Displacement Current / Point and Integral Forms of Maxwell's Equations / Phasor Notation / The Poynting Vector and Radiated Power / Derivation of Wave Equations and Diffusion Equations / Special Solutions in Conductors; Definitions of Skin Depth and Internal Impedance

Chapter 5 PLANE WAVES 167

The Helmholtz Equation and Its Plane Wave Solutions / Propagation Constant, Wavelength, Phase Velocity, Intrinsic Impedance / Time-Average Poynting Vector / The Loss Tangent / Approximations for the Propagation Constant and Intrinsic Impedance / Wave Polarization / Group Velocity and Dispersion / Reflection and Transmission at an Interface / Crank Diagram / Standing Waves / Perpendicular and Parallel Polarizations / Laws of Reflection and Refraction / Fresnel Equations / The Brewster Angle

Chapter 6 TRANSMISSION LINES 205

TEM Field Structure / The (Lossless) Transmission-Line Equations / Propagation Velocity and Characteristic Resistance / Voltage and Current Reflection / Steady-State Analysis / Complex Voltage Reflection Coefficient; Input Impedance; Electrical Length / Crank Diagram / VSWR / Electrically Short Lines / The (Lossy) Transmission-Line Equations / Propagation Constant and Characteristic Impedance / Per-Unit-Length-Parameters / Normalized Impedance and the Smith Chart

Chapter 7 WAVEGUIDES 269

Lossless Rectangular Guides: the Wave Equation / TE and TM Solutions / Cutoff Frequencies / Field Lines / Dominant Mode / Average Power Flow / Lossy Guides: Core and Wall Losses / Cylindrical Waveguides: Maxwell's Equations / Bessel Function Solutions for TM and TE Modes / Dielectric-Slab Waveguides / Optical Fibers

Chapter 8 CAVITY RESONATORS 307

Field Equations for Rectangular Cavities / Resonant Frequencies / Energy Storage, Losses, and the Quality Factor / Coaxial Cavities / Equivalent-Circuit Parameters / Cylindrical Cavities / Spherical Cavities

Chapter 9 ANTENNAS 327

The Hertzian Dipole / Properties of the Far Field / Power or Radiation Pattern / Radiation Resistance / The Magnetic Dipole / Finite (Lossless) Dipole Antennas / The Angle Factor / Input Impedance / Lossy Dipole Antennas / Radiative Efficiency / Antenna Arrays / Principle of Pattern Multiplication / Radiation Intensity, Directive Gain, and Directivity / Coupled Antennas: Equivalent Circuits and the Reciprocity Theorem / Effective Aperture of an Antenna / (Power) Gain / The Friis Transmission Equation / Effects of a Ground Plane / Beam Solid Angle / Effective Antenna Length / Diffraction Patterns / Polarization Loss Factor (PLF) / HPBW and BWFN / Hansen–Woodyard Criteria

Chapter 10 REVIEW PROBLEMS 376

INDEX 437
