25 Ceramic MEMS: New Materials, Innovative Processing and Future Applications

Ceramics are used in emerging MEMS technologies because of their diverse structural, chemical and functional properties and because innovative precursor-based processing is leading to low-cost and flexible approaches to manufacturing.

L. Liew, W. Zhang, L. An, S. Shah, R. Luo, Y. Lui, T. Cross, M.L. Dunn, V. Bright, R. Raj, Dept. of Mechanical Engineering; K. Anseth, Dept. of Chemical Engineering, University of Colorado

31 How PSD Affects Permeability of Castables

Water content and particle-size distribution affect the fluid dynamic properties of ultra-low-cement refractory castables.

M.D.M Innocentini, A.R. Studart, R.G. Pileggi and V.C. Pandolfelli, Dept. of Materials Engineering, Federal University of São Carlos

37 Digitizing Particle Size Analysis

Digital, high-definition particle-size analyzers take particle sizing to a higher level of resolution, accuracy, repeatability and reproducibility.

Paul A. Webb, Micromeritics Instrument Corp.

41 Fabrication of Organoceramic Films by Electrodeposition

Electrophoretic deposition and electrolytic deposition of ceramics and polymers have resulted in a wide variety of new, valuable materials.

I. Zhitomirsky and A. Petric, Dept. of Materials Science & Engineering, McMaster University

47 Alternative Turquoise Blue Pigment for Glazes

Turquoise blue-green ceramic pigments based on nickel-doped willemite with a minimized nickel content can be a less-expensive and less-contaminant alternative to cobalt olivine, cobalt aluminum spinel and cobalt chromite blue or blue-green pigments for some glaze applications.

A. Forés, M. Llusar, J.A. Badenes, J. Calbo, M.Á. Tena and G. Monrós, Inorganic & Organic Chemistry Dept., Jaume I. University
