Ryan Daniels

31 Electric Behavior of Porcelain Insulators in Polluted Environments

Organic protective layers on normally hydrophilic inorganic surfaces of silica insulators converts them to hydrophobic low-energy surfaces and prevents the formation of critical water films caused by nonpolar molecular groups.

J. Liebermann

37 High-Performance Refractory Castables

The influence of particle-size distribution on the mechanical properties of high-performance refractory castables—which combine easy mixing behavior, high fluidity, low water content, and optimal drying speed and creep rate at high temperatures—is reported.

R.G. Pileggi, A.R. Studart, M.D.M. Innocentini and V.C. Pandolfelli

57 ECD Expands Program Focus

ACerS Engineering Ceramics Division's 2002 Cocoa Beach Meeting included a new Symposium—Materials Technologies for Fuel Cells and Power Electronics

43 Two-Step Firing of Phosphate-Modified Whiteware

Addition of phosphate to whiteware compositions improved their whiteness. A two-step firing regime enhanced the crystallization of various phases and improved their properties. Addition of magnesium fluoride decreased the maturing temperature and shortened the maturing time.

D.M. Ibrahim and A.A. Mostafa

50 Ceramic Floor-Tile Kiln Fluoride Emission Factors

Results of a study of atmospheric fluoride stack-gas emission factors from a fast-fired floor-tile kiln are reported.

Tuncay Dageroglu and Serap Kara

53 Addition of Quartz to Fast-Fired Wollastonite-Based Wall Tile

Effects of increased quartz on the physical properties and microstructure of a wall-tile body were verified. Full text is available online at www.ceramicbulletin.org.
