

FUNDAMENTALS OF STRUCTURAL INTEGRITY

Damage tolerant design and nondestructive evaluation

ALLEN F. GRANDT JR.

CONTENTS

PREFACE	xix
I INTRODUCTION	1
1 INTRODUCTION	3
1.1 Overview / 3	
1.2 Manufacturing and Service-Induced Damage / 6	
1.2.1 Manufacturing Damage / 6	
1.2.2 Service-Induced Damage / 8	
1.3 Failure Modes / 11	
1.3.1 Elastic Deformations / 11	
1.3.2 Inelastic Deformations / 12	
1.3.3 Buckling / 12	
1.3.4 Fatigue / 12	
1.3.5 Creep / 15	
1.3.6 Corrosion / 15	
1.3.7 Fracture / 16	
1.4 Nondestructive Evaluation / 17	
1.5 Fatigue Design Criteria / 18	
1.5.1 Infinite-Life Design / 18	

- 1.5.2 Safe-Life Design / 19
- 1.5.3 Damage Tolerant Design / 20
- 1.5.4 Retirement for Cause / 22
- 1.6 Concluding Remarks / 23
 - Problems / 23
 - References / 25

2 REVIEW OF PRELIMINARY CONCEPTS

26

- 2.1 Overview / 26
- 2.2 Stress / 26
- 2.3 Strain / 33
- 2.4 Stress–Strain Relations / 36
- 2.5 Tensile Properties / 38
- 2.6 Failure Modes / 41
 - 2.6.1 Elastic (Recoverable) Deformations / 41
 - 2.6.2 Inelastic Deformations (Yielding) / 42
 - 2.6.3 Buckling / 46
 - 2.6.4 Creep / 50
- 2.7 Concluding Remarks / 52
 - Problems / 53
 - References / 61

3 INTRODUCTION TO LINEAR ELASTIC FRACTURE MECHANICS

62

- 3.1 Overview / 62
- 3.2 Stress Intensity Factor / 63
- 3.3 Fracture / 72
- 3.4 Fatigue Crack Growth / 74
- 3.5 Stress Corrosion Cracking / 82
- 3.6 Concluding Remarks / 86
 - Problems / 86
 - References / 95

4 NONDESTRUCTIVE EVALUATION

97

- 4.1 Overview / 97
- 4.2 Goals for Nondestructive Evaluation / 98
 - 4.2.1 Detection Requirements / 98
 - 4.2.2 Inspection Period / 100
- 4.3 Proof Testing / 102

- 4.4 Overview of Primary Nondestructive Evaluation Methods / 105
 - 4.4.1 Visual Inspection / 105
 - 4.4.2 Dye Penetrant Inspection / 105
 - 4.4.3 Radiography / 106
 - 4.4.4 Ultrasonic Inspection / 106
 - 4.4.5 Eddy Current Inspection / 106
 - 4.4.6 Magnetic Particle Inspection / 107
- 4.5 Overview of Other Nondestructive Evaluation Methods / 107
 - 4.5.1 Acoustic Emission / 107
 - 4.5.2 Thermal Imaging / 107
 - 4.5.3 Advanced Optical Methods / 108
 - 4.5.4 Other Inspection Methods / 108
- 4.6 Inspection Reliability / 108
 - 4.6.1 Human Factors / 109
 - 4.6.2 Probability of Detection / 110
- 4.7 Concluding Remarks / 115
 - Problems / 117
 - References / 119

■ DAMAGE TOLERANCE ANALYSIS 121

5 CRACK TIP PLASTICITY 123

- 5.1 Overview / 123
- 5.2 Irwin Circular Plastic Zone / 124
- 5.3 Dugdale (Strip) Model / 128
- 5.4 von Mises Plastic Zone / 131
 - 5.4.1 Mode III Case / 132
 - 5.4.2 Mode I Case / 132
- 5.5 Cyclic Plastic Zone / 135
- 5.6 Concluding Remarks / 135
 - Problems / 136
 - References / 138

6 FRACTURE AND RESIDUAL STRENGTH 140

- 6.1 Overview / 140
- 6.2 Historical Perspective / 140

- 6.3 Crack Extension Force G / 141
- 6.4 Relation between G and K / 145
- 6.5 Fracture Toughness versus Plastic Zone Size / 148
 - 6.5.1 Toughness versus Specimen Thickness / 148
 - 6.5.2 Toughness versus Yield Stress / 151
- 6.6 Leak-before-Break / 154
- 6.7 Ductile Fracture / 155
 - 6.7.1 Fedderson Approach / 156
 - 6.7.2 Crack Growth Resistance Curves (R -Curves) / 157
 - 6.7.3 J -Integral / 159
 - 6.7.4 Crack Tip Opening Displacement / 160
- 6.8 Concluding Remarks / 160
 - Problems / 161
 - References / 165

7 FATIGUE CRACK GROWTH

- 7.1 Overview / 167
- 7.2 Stress Ratio Effects / 168
- 7.3 Fatigue Crack Growth Rate Models / 169
- 7.4 Load Interaction Effects / 172
- 7.5 Crack Retardation Models / 176
 - 7.5.1 Yield Stress Models / 178
 - 7.5.2 Fatigue Crack Closure / 180
- 7.6 Thickness and Material Effects / 183
- 7.7 Small Fatigue Cracks / 185
- 7.8 Environmental Effects / 187
- 7.9 Variable-Amplitude Life Prediction Schemes / 191
 - 7.9.1 Effective Stress Approach / 192
 - 7.9.2 Cycle-by-Cycle Approach / 194
- 7.10 Multi-Degree-of-Freedom Analysis / 195
 - 7.10.1 Surface Cracks / 195
 - 7.10.2 Multiple Cracks / 197
- 7.11 Fatigue Crack Thresholds / 199
- 7.12 Fatigue Crack Closure / 203
 - 7.12.1 Closure Mechanisms / 203
 - 7.12.2 Closure Measurements / 204
 - 7.12.3 Consequences of Crack Closure / 205
 - 7.12.4 Three-Dimensional Aspects of Crack Closure / 206
- 7.13 Concluding Remarks / 207

Problems / 210
References / 217

8 STRESS INTENSITY FACTOR ANALYSIS **220**

- 8.1 Overview / 220
 - 8.2 Surface Cracks / 221
 - 8.3 Engineering Estimates of K / 225
 - 8.4 Linear Superposition / 228
 - 8.5 Experimental Methods / 234
 - 8.5.1 Compliance Calibration / 234
 - 8.5.2 Crack Tip Opening Measurement / 235
 - 8.5.3 Photoelastic Techniques / 236
 - 8.5.4 Fatigue Crack Growth Rate Calibrations / 236
 - 8.5.5 Fracture Toughness Calibrations / 237
 - 8.6 Analytical and Numerical Methods / 237
 - 8.6.1 Weight Function Method / 238
 - 8.6.2 Finite Element Methods / 241
 - 8.7 Concluding Remarks / 242
- Problems / 243
References / 244

9 SERVICE-INDUCED DAMAGE **247**

- 9.1 Overview / 247
 - 9.2 Fatigue Crack Nucleation / 247
 - 9.2.1 Fatigue Testing / 248
 - 9.2.2 Stress–Life Approach / 252
 - 9.2.3 Strain–Life Approach / 258
 - 9.2.4 Notch Fatigue / 264
 - 9.2.5 Variable-Amplitude Loading / 267
 - 9.2.6 Cycle Counting / 271
 - 9.3 Corrosion / 273
 - 9.3.1 Forms of Corrosion / 274
 - 9.3.2 Corrosion Protection / 278
 - 9.4 Total-Fatigue-Life Calculations / 279
 - 9.5 Equivalent Initial Crack Size / 280
 - 9.6 Accidental and Discrete-Source Damage / 283
 - 9.7 Concluding Remarks / 283
- Problems / 284
References / 290

III NONDESTRUCTIVE EVALUATION 293

10 VISUAL AND LIQUID PENETRANT INSPECTIONS 295

- 10.1 Overview / 295
- 10.2 Visual Inspection / 296
 - 10.2.1 Borescopes / 296
 - 10.2.2 Japanese Airline Experience / 298
 - 10.2.3 Federal Aviation Administration (FAA) Benchmark Study / 299
- 10.3 Liquid Penetrant Inspection / 301
- 10.4 Classification of Penetrant Methods / 305
 - 10.4.1 Penetrant Types / 305
 - 10.4.2 Penetrant Removal Methods / 306
 - 10.4.3 Developers / 306
- 10.5 Penetrant Applications / 307
- 10.6 Safety Considerations / 308
- 10.7 Summary of Liquid Penetrant Nondestructive Evaluation / 309
 - 10.7.1 Advantages of Liquid Penetrant Inspection / 309
 - 10.7.2 Disadvantages of Liquid Penetrant Inspection / 309
- 10.8 Concluding Remarks / 310
 - Problems / 310
 - References / 311

11 RADIOGRAPHIC INSPECTIONS 313

- 11.1 Overview / 313
- 11.2 Background / 313
- 11.3 Differential Absorption/Scattering / 315
- 11.4 Sources of Radiation / 318
 - 11.4.1 X-Rays / 318
 - 11.4.2 Gamma Rays / 320
 - 11.4.3 Neutron Radiography / 321
- 11.5 Image Formation / 323
 - 11.5.1 Film / 324
 - 11.5.2 Fluorescent Screens / 325
 - 11.5.3 Linear Detector Arrays / 325
- 11.6 Image Quality / 325
 - 11.6.1 Scattering Control / 325

- 11.6.2 Intensifying Screens / 326
- 11.6.3 Geometric Factors / 326
- 11.6.4 Film Unsharpness / 327
- 11.6.5 Image Quality Indicators / 328
- 11.6.6 Sample Radiographs / 328
- 11.7 Welded Pipeline Applications / 329
- 11.8 Safety Concerns / 332
- 11.9 Computed Tomography / 334
- 11.10 Concluding Remarks / 338
 - 11.10.1 Advantages of Radiography / 338
 - 11.10.2 Disadvantages of Radiography / 338
 - Problems / 339
 - References / 340

12 ULTRASONIC INSPECTION

341

- 12.1 Overview / 341
- 12.2 Properties of Sound Waves / 342
- 12.3 Boundary Interactions / 346
 - 12.3.1 Acoustic Impedance / 346
 - 12.3.2 Oblique Incidence / 348
 - 12.3.3 Mode Conversion / 349
 - 12.3.4 Critical Angles / 350
 - 12.3.5 Double Interface / 353
 - 12.3.6 Corner Reflections / 355
- 12.4 Ultrasonic Attenuation / 356
- 12.5 Ultrasonic Inspection Techniques / 357
 - 12.5.1 Immersion and Contact Methods / 358
 - 12.5.2 Pulse Echo / 360
 - 12.5.3 Through Transmission / 361
 - 12.5.4 Contact Angle-Beam Techniques / 361
 - 12.5.5 Critical-Angle Techniques / 363
 - 12.5.6 Continuous-Wave Inspections / 364
 - 12.5.7 Time-of-Flight Diffraction / 364
- 12.6 Ultrasound Generation and Detection / 365
 - 12.6.1 Piezoelectric Transducers / 365
 - 12.6.2 Electromagnetic-Acoustic Transducers / 367
 - 12.6.3 Laser-Generated Ultrasound / 367
- 12.7 Ultrasonic Parameter Selection / 368
- 12.8 Data Presentation / 369

- 12.9 Concluding Remarks / 372
 - 12.9.1 Advantages of Ultrasonic Inspection / 372
 - 12.9.2 Disadvantages of Ultrasonic Inspection / 373
- Problems / 373
- References / 375

13 EDDY CURRENT INSPECTION

377

- 13.1 Overview / 377
- 13.2 Coil Types / 378
- 13.3 Coil Arrangements / 381
- 13.4 Parameter Sensitivity / 383
 - 13.4.1 Electrical Conductivity / 383
 - 13.4.2 Magnetic Permeability / 384
 - 13.4.3 Lift-off Factor / 385
 - 13.4.4 Fill Factor / 385
 - 13.4.5 Edge Effect / 385
 - 13.4.6 Skin Effect / 386
 - 13.4.7 Other Factors / 387
- 13.5 Impedance Testing / 388
 - 13.5.1 Impedance-Testing Systems / 389
 - 13.5.2 Phase Analysis Systems / 390
- 13.6 Operating Frequency / 393
- 13.7 Eddy Current Applications / 394
- 13.8 Concluding Remarks / 397
 - 13.8.1 Advantages of Eddy Current Testing / 397
 - 13.8.2 Disadvantages of Eddy Current Testing / 397
- Problems / 398
- References / 399

14 MAGNETIC PARTICLE INSPECTION

400

- 14.1 Overview / 400
- 14.2 Principles of Magnetism / 400
- 14.3 Magnetic Field Generation / 403
 - 14.3.1 Coils / 403
 - 14.3.2 Central Conductors / 405
 - 14.3.3 Direct Contact / 407
 - 14.3.4 Yokes / 408
 - 14.3.5 Prod Contacts / 409
 - 14.3.6 Induced Current / 411

- 14.4 Magnetic Hysteresis/Demagnetization / 411
 - 14.4.1 Magnetic Hysteresis / 411
 - 14.4.2 Demagnetization / 412
- 14.5 Magnetic Flux Leakage Sensors / 414
 - 14.5.1 Magnetic Particles / 414
 - 14.5.2 Other Visual Sensors / 415
 - 14.5.3 Other Magnetic Sensors / 416
- 14.6 Other Magnetic NDE Methods / 417
 - 14.6.1 Electric Current Injection / 417
 - 14.6.2 Barkhausen Effect / 418
- 14.7 Concluding Remarks / 418
 - 14.7.1 Advantages of Magnetic Particle NDE / 418
 - 14.7.2 Disadvantages of Magnetic Particle NDE / 419
 - Problems / 419
 - References / 420

15 OTHER INSPECTION METHODS

421

- 15.1 Overview / 421
- 15.2 Acoustic Emission Inspection / 421
 - 15.2.1 Acoustic Emission Signals / 422
 - 15.2.2 Acoustic Emission Sensors / 426
 - 15.2.3 Acoustic Emission Techniques / 427
 - 15.2.4 Summary of Acoustic Emission NDE / 428
- 15.3 Thermal Inspection / 429
 - 15.3.1 Temperature Measurement / 429
 - 15.3.2 Heating Methods / 431
 - 15.3.3 Typical Applications of Thermal NDE / 431
 - 15.3.4 Summary of Thermal NDE / 433
- 15.4 Advanced Optical Techniques / 434
 - 15.4.1 Optical Interference / 434
 - 15.4.2 Holography / 435
 - 15.4.3 Moiré / 437
 - 15.4.4 Other Optical Methods / 439
- 15.5 Other Methods / 439
- 15.6 Concluding Remarks / 439
 - Problems / 440
 - References / 442

IV APPLICATIONS	445
16 DESIGN CONSIDERATIONS	447
16.1 Overview / 447	
16.2 Certification Requirements / 447	
16.2.1 FAA and USAF Damage Tolerance Criteria / 448	
16.2.2 Inspection Requirements / 449	
16.3 Overview of Structural Integrity Program / 450	
16.4 Loads / 451	
16.4.1 Load Factors / 452	
16.4.2 Load Spectrum Issues / 455	
16.5 Damage Tolerant Structural Configurations / 458	
16.5.1 Crack Arresting Structures / 458	
16.5.2 Inspection Intervals for Damage Tolerant Structures / 464	
16.6 Materials Selection / 469	
16.7 Design for Inspection / 471	
16.8 Acceptance of New Technology for Structural Design / 472	
16.9 Concluding Remarks / 475	
Problems / 475	
References / 480	
17 STRUCTURAL INTEGRITY OF AGING SYSTEMS	482
17.1 Overview / 482	
17.2 Summary of Potential Threats to Aging Systems / 483	
17.3 Widespread Fatigue Damage / 483	
17.3.1 Residual Strength / 484	
17.3.2 Fatigue Crack Growth / 487	
17.4 Corrosion / 491	
17.5 Other Threats to Older Structures / 493	
17.6 Life Extension Concepts / 493	
17.6.1 Beneficial Residual Stresses / 497	
17.6.2 Materials Replacement Options and Issues / 500	
17.7 Inspection Issues for Older Structures / 501	
17.8 Concluding Remarks / 502	
Problems / 502	
References / 506	

18 CONCLUDING REMARKS 509

- 18.1 Overview / 509
- 18.2 Specialized Applications / 510
 - 18.2.1 Rotorcraft Structures / 511
 - 18.2.2 Turbine Engines / 512
 - 18.2.3 Composite Materials / 513
- 18.3 Preventing Failure of the Failure Plan / 514
- 18.4 Final Exhortation / 515
 - References / 515

APPENDIX: AFGROW USER'S GUIDE 517

- A.1 Introduction / 517
- A.2 AFGROW Installation / 517
 - A.2.1 Installation Process / 517
 - A.2.2 Uninstalling AFGROW for Windows / 518
- A.3 Interface Features / 519
 - A.3.1 Main Frame / 519
 - A.3.2 Animation Frame / 519
 - A.3.3 Output Frame / 520
- A.4 AFGROW Menu Selections / 520
 - A.4.1 Input Title / 520
 - A.4.2 Input Material / 520
- A.5 Input Geometry and Dimensions / 521
 - A.5.1 Classic Geometry Models / 521
 - A.5.2 Model Dimensions / 523
 - A.5.3 Model Load / 523
- A.6 Input Retardation / 526
- A.7 Predict Preferences / 527
- A.8 Examples / 528
 - A.8.1 Edge Crack in Wide Plate / 528
 - A.8.2 Corner Crack at Open Hole / 529
- A.9 Concluding Remarks / 530

INDEX 531
