

Graham C. Goodwin [Ed]

Model Identification and Adaptive Control

Springer

Contents

Part I. General Aspects of Model Identification

1 System Identification – General Aspects and Structure	3
<i>Manfred Deistler</i>	
1.1 Introduction	3
1.2 Structure Theory	6
1.3 Estimation for a given subclass	10
1.4 Model selection	16
1.5 Linear non-mainstream cases	19
1.6 Non-linear systems	21
1.7 Past, present state and perspectives of system identification	22
References	24
2 Singularity Issues Associated with Closed Loop Identification	27
<i>Graham C. Goodwin, James S. Welsh</i>	
2.1 Introduction	27
2.2 Frequency Domain Estimation of Complimentary Sensitivity	29
2.3 Plant Identification via Parametric Modelling of the Complementary Sensitivity	34
2.4 Simulation Example	36
2.5 Modelling of Plant via Nonparametric Methods	37
2.6 Modified Indirect Estimation of G	39
2.7 Heuristic Analysis of Finite Sample Properties	40
2.8 Rigorous Analysis of Bias and Variance	41
2.9 Simulation	50
2.10 Conclusion	50
References	51
3 Mapping Parametric Confidence Ellipsoids to Nyquist Plane for Linearly Parametrized Transfer Functions . .	53
<i>Xavier Bombois, Brian D.O. Anderson, Michel Gevers</i>	
3.1 Introduction	53
3.2 Problem statement	54
3.3 Linear algebra preliminaries	56
3.4 Image of \mathcal{D} in the Nyquist plane	59
3.5 Inverse image of \mathcal{L}	61
3.6 Probability level linked to the confidence region \mathcal{L}	63
3.7 Case of not linearly parametrized model structures	66
3.8 Simulation example	66
3.9 Conclusions	69

References	70
------------------	----

Part II. Interactions Between Model Identification and Intended Model Use

4 On the Use of Real Data for Controller Reduction	75
<i>I. D. Landau</i>	
4.1 Introduction	75
4.2 Notations	77
4.3 The algorithms	78
4.4 Plant model identification in closed loop	82
4.5 Properties of the estimated reduced order controllers	83
4.6 A simulation example	84
4.7 Experimental results on an active suspension	86
4.8 Conclusion	91
References	93
5 Making a Nonlinear Observer Adaptive	95
<i>Ramon Costa, Petar Kokotović, Iven Mareels</i>	
5.1 Introduction	95
5.2 Arcak observer	96
5.3 Van der Pol oscillator with a parameter	97
5.4 Adaptation: a MRAC scheme	100
5.5 Adaptation: a gradient scheme	101
5.6 Simulations and discussion	101
References	103
6 Sensor Adaptive Target Tracking over Variable Bandwidth Networks	105
<i>Robin Evans, Vikram Krishnamurthy, Girish Nair</i>	
6.1 Introduction	105
6.2 Problem Formulation	107
6.3 Illustrative Applications	112
6.4 Optimal Algorithms	114
6.5 Sub-optimal Algorithms	115
6.6 Numerical Examples	118
6.7 Extensions	118

Part III. Illustrative Applications of Identification and Control

7 Adaptive Servo Control of Large Antenna Structures	127
<i>R.J. Evans, I.M.Y. Mareels, L. J. Sciacca, D.N.Cooper, R.H. Middleton, R.E. Betz, R. A. Kennedy</i>	
7.1 Introduction	128
7.2 System description	131

7.3 Servo controller design objectives	137
7.4 Classical cascaded feedback	140
7.5 Adaptive position control	143
7.6 Conclusion	148
References	150

8 Quantizer Optimization: Application of Passivity in Telecommunications

Rodney A. Kennedy, Zhi Ding, Shazia Hasnie

8.1 Introduction	153
8.2 Problem Formulation	155
8.3 Passivity Concepts and Definitions	162
8.4 Stability and Error Propagation	168
8.5 Main Stability Results	171
8.6 Conclusions	175
References	176

9 Connecting Steiglitz-McBride Identification, Active Noise Control, and Coefficient Filtering to a Common Framework

C. Richard Johnson Jr., William A. Sethares

9.1 Introduction	179
9.2 Technical Background	180
9.3 Steiglitz-McBride Algorithms	182
9.4 Active Noise Control and the Filtered-u Algorithms	187
9.5 Coefficient Filtering and Update Smoothing	192
9.6 Conclusion	196
References	197

Part IV. Fundamental Design Issues in Adaptive Control

10 Iterative Adaptive Control: Windsurfing with Confidence 201

Robert L. Kosut

10.1 Introduction	201
10.2 Iterative Adaptive Control	204
10.3 Parametrization and Performance	208
10.4 Uncertainty Model Unfalsification	211
10.5 Controller Unfalsification	215
10.6 Iterative Controller Unfalsification	220
10.7 Concluding Remarks	224
References	227

11 Model Quality for the Windsurfer Scheme of Adaptive Control	231
<i>Robert R. Bitmead, Wayne J. Dunstan</i>	
11.1 Introduction	231
11.2 Internal Model Control for Stable Systems	232
11.3 Models for Robust Stability and Performance	235
11.4 Conclusions	241
11.5 Coda	241
References	242
12 Cheap Control Fundamental Limitations: The Linear Time-Varying Case	245
<i>Thomas S. Brinsmead</i>	
12.1 Introduction	245
12.2 Linear Time-Varying Systems	247
12.3 Cheap LQR Problem	256
12.4 Main Result	259
12.5 Example	260
12.6 Conclusion	262
References	263

Part V. Appendix

Professor Brian D.O. Anderson, Bibliographic Record, Books and Journal Articles 1965 – 1999.	269
