

PROCESS
ENGINEERING
AND DESIGN FOR
AIR POLLUTION
CONTROL

JAIME BENÍTEZ

Contents

Preface ix

1. An Overview of the Air Pollution Problem 1

- 1.1 Introduction 1
- 1.2 Air pollutants 2
- 1.3 Concentration units for atmospheric pollutants 5
- 1.4 Some deleterious effects of air pollutants 7
- 1.5 Federal air pollution legislation in the United States 19
- 1.6 Chemical engineering principles in the solution of air pollution problems 30
- 1.7 Conclusion 37
- References 38
- Problems 40

2. Cost Estimation Methodology 50

- 2.1 Introduction 50
- 2.2 Capital investment estimation 50
- 2.3 Cost indices 54
- 2.4 Total annual cost 61
- 2.5 Choosing between viable alternatives 70
- 2.6 Conclusion 84
- References 85
- Problems 86

3. Incineration for Control of VOC Emissions 95

- 3.1 Introduction 95
- 3.2 Waste gas categorization 95
- 3.3 Theoretical considerations 96
- 3.4 Design considerations for thermal incinerators 107
- 3.5 Catalytic incinerators 121
- 3.6 Pressure drop considerations 127
- 3.7 Capital and annual operating costs of incinerators 130
- 3.8 Conclusion 138
- References 139
- Problems 140

4. Adsorption Devices 148

- 4.1 Introduction 148
- 4.2 Adsorption equilibria 149
- 4.3 Dynamics of fixed-bed adsorption 155
- 4.4 Heat- and momentum-transfer in fixed-bed adsorbers 172
- 4.5 Design considerations for fixed-bed adsorbers 175
- 4.6 Costing procedure for fixed-bed adsorbers 179
- 4.7 Conclusion 183
- References 184
- Problems 186

5. Flue Gas Desulfurization 199

- 5.1 Introduction 199
- 5.2 Material and energy balances 199
- 5.3 Gas absorption applied to FGD 203
- 5.4 Overview of FGD processes 220
- 5.5 FGD systems cost estimates 237
- 5.6 Conclusion 240
- References 241

6. Control of Nitrogen Oxides 254

- 6.1 Introduction 254
- 6.2 Thermal NO_x formation 257
- 6.3 Fuel NO_x formation 267
- 6.4 Techniques for the control of NO_x emissions 269
- 6.5 Costs of NO_x control techniques 279
- 6.6 Conclusion 280
 - References 281
 - Problems 283

7. Fundamentals of Particulate Emissions Control 294

- 7.1 Introduction 294
- 7.2 Characteristics of particles 294
- 7.3 Dynamics of particles in fluids 304
- 7.4 Effectiveness of collection 312
- 7.5 Conclusion 322
 - References 323
 - Problems 324

8. Cyclonic Devices 333

- 8.1 Introduction 333
- 8.2 Cyclonic flow 334
- 8.3 Standard cyclone configurations 342
- 8.4 Size distribution of penetrating particles 345
- 8.5 Multiple cyclones 350
- 8.6 Cost analysis for cyclones 352
- 8.7 Conclusion 362
 - References 363
 - Problems 364

9. Electrostatic Precipitators 370

- 9.1 Introduction 370
- 9.2 Types of ESPs 370
- 9.3 Electrostatic precipitator theory 374
- 9.4 Overall efficiency 385
- 9.5 Corrections to the model 389
- 9.6 Practical design considerations 396
- 9.7 Costing considerations 401
- 9.8 Conclusion 404
- References 405
- Problems 406

10. Fabric Filters 414

- 10.1 Introduction 414
- 10.2 Types of fabric filters 415
- 10.3 Fabric filtration theory 417
- 10.4 Practical design considerations 426
- 10.5 Costs of fabric filtration 432
- 10.6 Conclusion 438
- References 440
- Problems 442

Appendices

- A Heat Capacity Equations 450**
- B Heating Values of Various Compounds 451**
- C Clean Air Act Amendments of 1990 452**
- D Gaussian Quadrature 456**
