Airplane Stability and Control

A History of the Technologies That Made Aviation Possible

Malcolm J. Abzug
E. Eugene Larrabee

CAMBRIDGE AEROSPACE SERIES

Contents

Preface xv

Chapter 1 Early Developments in Stability and Control 1

1.1 Inherent Stability and the Early Machines 1
1.2 The Problem of Control 1
1.3 Catching Up to the Wright Brothers 3
1.4 The Invention of Flap-Type Control Surfaces and Tabs 3
1.5 Handles, Wheels, and Pedals 5
1.6 Wright Controls 5
1.7 Bleriot Controls 6
1.8 Stability and Control of World War I Pursuit Airplanes 6
1.9 Contrasting Design Philosophies 7
1.10 Frederick Lanchester 10
1.11 G. H. Bryan and the Equations of Motion 10
1.12 Metacenter, Center of Pressure, and Aerodynamic Center 11

Chapter 2 Teachers and Texts 13

2.1 Stability and Control Educators 13
2.2 Stability and Control Textbooks and Conferences 15

Chapter 3 Flying Qualities Becomes a Science 17

3.1 Warner, Norton, and Allen 17
3.2 The First Flying Qualities Specification 20
3.3 Hartley Soulé and Floyd Thompson at Langley 20
3.4 Robert Gilruth's Breakthrough 24
3.5 S. B. Gates in Britain 28
3.6 The Military Services Follow NACA's Lead 29
3.7 Equivalent System Models and Pilot Rating 31
3.8 The Counterrevolution 32
3.9 Procurement Problems 33
3.10 Variable-Stability Airplanes Play a Part 33
3.11 Variable-Stability Airplanes as Trainers 34
3.12 The Future of Variable-Stability Airplanes 34
3.13 The VSTOL Case 37
3.14 Two Famous Airplanes 38
3.15 Changing Military Missions and Flying Quality Requirements 39

Chapter 4 Power Effects on Stability and Control 42
4.1 Propeller Effects on Stability and Control 42
4.2 Direct Thrust Moments in Pitch 43
4.3 Direct Thrust Moments in Yaw 44
4.4 World War II Twin-Engined Bombers 44
4.5 Modern Light Twin Airplanes 45
4.6 Propeller Slipstream Effects 47
4.7 Direct Propeller Forces in Yaw (or at Angle of Attack) 49
4.8 Jet and Rocket Effects on Stability and Control 50
4.8.1 Jet Intake Normal Force 50
4.8.2 Airstream Deviation due to Inflow 51
4.9 Special VTOL Jet Inflow Effects 52
4.10 Jet Damping and Inertial Effects 52

Chapter 5 Managing Control Forces 54
5.1 Desirable Control Force Levels 54
5.2 Background to Aerodynamically Balanced Control Surfaces 54
5.3 Horn Balances 55
5.4 Overhang or Leading-Edge Balances 55
5.5 Frise Ailerons 60
5.6 Aileron Differential 61
5.7 Balancing or Geared Tabs 63
5.8 Trailing Edge Angle and Beveled Controls 63
5.9 Corded Controls 65
5.10 Spoiler Ailerons 65
5.11 Internally Balanced Controls 68
5.12 Flying (Servo) and Linked Tabs 70
5.13 Spring Tabs 72
5.14 Springy Tabs and Downsprings 73
5.15 All-Movable Controls 75
5.16 Mechanical Control System Design Details 75
5.17 Hydraulic Control Boost 76
5.18 Early Hydraulic Boost Problems 77
5.19 Irreversible Powered Controls 77
5.20 Artificial Feel Systems 78
5.21 Fly-by-Wire 79
5.22 Remaining Design Problems in Power Control Systems 82
5.23 Safety Issues in Fly-by-Wire Control Systems 82
5.24 Electric and Fly-by-Light Controls 83

Chapter 6 Stability and Control at the Design Stage 84
6.1 Layout Principles 84
6.1.1 Subsonic Airplane Balance 84
6.1.2 Tail Location, Size, and Shape 85
6.2 Estimation from Drawings 86
6.2.1 Early Methods 86

6.2.2 Wing and Tail Methods 86
6.2.3 Bodies 87
6.2.4 Wing-Body Interference 87
6.2.5 Downwash and Sidewash 87
6.2.6 Early Design Methods Matured—USAF DATCOM and RAE Data Sheets 88
6.2.7 Finite Element Mathematical Models 88
6.3 Estimation from Wind Tunnel Data 91

Chapter 7 The Jets at an Awkward Age 92
7.1 Needed Devices are not Installed 92
7.2 F4D, A4D, and A3D Manual Reversions 92
7.3 Partial Power Control 93
7.4 Nonelectronic Stability Augmentation 93
7.5 Grumman XF10F Jaguar 96
7.6 B-52 Successful Compromises 97
7.6.1 The B-52 Rudder has Limited Control Authority 97
7.6.2 The B-52 Elevator also has Limited Control Authority 99
7.6.3 The B-52 Manually Controlled Ailerons are Small 99

Chapter 8 The Discovery of Inertial Coupling 101
8.1 Phillips Finds an Anomaly 101
8.2 The Phillips Inertial Coupling Technical Note 101
8.3 The First Flight Occurrences 105
8.4 The 1956 Wright Field Conference 108
8.5 Simplifications and Explications 108
8.6 The F4D Skyray Experience 111
8.7 Later Developments 113
8.8 Inertial Coupling and Future General Aviation Aircraft 113

Chapter 9 Spinning and Recovery 115
9.1 Spinning Before 1916 115
9.2 Advent of the Free-Spinning Wind Tunnels 115
9.3 Systematic Configuration Variations 118
9.4 Design for Spin Recovery 120
9.5 Changing Spin Recovery Piloting Techniques 121
9.6 The Role of Rotary Derivatives in Spins 122
9.7 Rotary Balances and the Steady Spin 123
9.8 Rotary Balances and the Unsteady Spin 123
9.9 The Case of the Grumman/American AA-1B 125
9.10 The Break with the Past 126
9.11 Effects of Wing Design on Spin Entry and Recovery 128
9.12 Drop and Radio-Controlled Model Testing 129
9.13 Remotely Piloted Spin Model Testing 129
9.14 Criteria for Departure Resistance 131

9.15	Vortex Effects and Self-Induced Wing Rock	135
9.16	Bifurcation Theory	136
9.17	Departures in Modern Fighters	136
Chapter 10	**Tactical Airplane Maneuverability**	**140**
10.1	How Fast Should Fighter Airplanes Roll?	140
10.2	Air-to-Air Missile-Armed Fighters	142
10.3	Control Sensitivity and Overshoots in Rapid Pullups	142
10.4	Rapid Rolls to Steep Turns	146
10.5	Super-Maneuverability; High Angles of Attack	148
10.6	Unsteady Aerodynamics in the Super-Maneuverability Regime	151
10.7	The Inverse Problem	151
10.8	Thrust-Vector Control for Super-Maneuvering	153
10.9	Longitudinal Control for Recovery	153
10.10	Concluding Remarks	154
Chapter 11	**High Mach Number Difficulties**	**155**
11.1	A Slow Buildup	155
11.2	The First Dive Pullout Problems	157
11.3	P-47 Dive Tests at Wright Field	157
11.4	P-51 and P-39 Dive Difficulties	160
11.5	Transonic Aerodynamic Testing	161
11.6	Invention of the Sweptback Wing	162
11.7	Sweptback Wings are Tamed at Low Speeds	165
11.8	Trim Changes due to Compressibility	168
11.9	Transonic Pitchup	169
11.10	Supersonic Directional Instability	173
11.11	Principal Axis Inclination Instability	175
11.12	High-Altitude Stall Buffet	175
11.13	Supersonic Altitude Stability	176
11.14	Stability and Control of Hypersonic Airplanes	178
Chapter 12	**Naval Aircraft Problems**	**181**
12.1	Standard Carrier Approaches	181
12.2	Aerodynamic and Thrust Considerations	182
12.3	Theoretical Studies	184
12.4	Direct Lift Control	187
12.5	The T-45A Goshawk	189
12.6	The Lockheed S-3A Viking	190
12.7	Concluding Remarks	191
Chapter 13	**Ultra-Light and Human-Powered Airplanes**	**192**
13.1	Apparent Mass Effects	192
13.2	Ultra-Light Airplane Pitch Stability	193

13.3 Turning Ultra-Light Airplanes 193
13.4 The Gossamer Aircraft 194
13.5 MIT Human-Powered Aircraft 194
13.6 Concluding Remarks 200

Chapter 14 Fuel Slosh, Deep Stall, and More 201
14.1 Fuel Shift and Dynamic Fuel Slosh 201
14.2 Deep Stall 204
14.3 Ground Effect 208
14.4 Vee- or Butterfly Tails 209
14.5 Control Surface Buzz 212
14.6 Rudder Lock and Dorsal Fins 214
14.7 Stability Derivative Extraction from Flight Test 218

Chapter 15 Safe Personal Airplanes 222
15.1 The Guggenheim Safe Aircraft Competition 222
15.2 Progress after the Guggenheim Competition 222
15.3 Early Safe Personal Airplane Designs 224
15.4 1948 and 1966 NACA and NASA Test Series 225
15.5 Control Friction and Apparent Spiral Instability 227
15.6 Wing Levelers 228
15.7 The Role of Displays 230
15.8 Inappropriate Stability Augmentation 231
15.9 Unusual Aerodynamic Arrangements 232
15.10 Single Pilot Instrument Flight Rules (IFR) Operations 232
15.11 The Prospects for Safe Personal Airplanes 233

Chapter 16 Stability and Control Issues with Variable Sweep 235
16.1 The First Variable-Sweep Wings—Rotation and Translation 235
16.2 The Rotation-Only Breakthrough 235
16.3 The F-111 Aardvark or TFX 236
16.4 The F-14 Tomcat 236
16.5 The Rockwell B-1 236
16.6 The Oblique or Skewed Wing 238
16.7 Other Variable-Sweep Projects 242

Chapter 17 Modern Canard Configurations 244
17.1 Bert Rutan and the Modern Canard Airplane 244
17.2 Canard Configuration Stall Characteristics 244
17.3 Directional Stability and Control of Canard Airplanes 245
17.4 The Penalty of Wing Sweepback on Low Subsonic Airplanes 245
17.5 Canard Airplane Spin Recovery 247
17.6 Other Canard Drawbacks 247
17.7 Pusher Propeller Problems 247

17.8 The Special Case of the Voyager 248
17.9 Modern Canard Tactical Airplanes 250

Chapter 18 Evolution of the Equations of Motion 251
18.1 Euler and Hamilton 251
18.2 Linearization 254
18.3 Early Numerical Work 256
18.4 Glauert's and Later Nondimensional Forms 257
18.5 Rotary Derivatives 259
18.6 Stability Boundaries 260
18.7 Wind, Body, Stability, and Principal Axes 261
18.8 Laplace Transforms, Frequency Response, and Root Locus 264
18.9 Modes and Literal Approximations 264
18.10 Time Vector Analysis 265
18.11 Vector, Dyadic, Matrix, and Tensor Forms 266
18.12 Atmospheric Models 268
18.13 Integration Methods and Closed Forms 272
18.14 Into Near-Orbital Flight 274
18.15 Near-Orbital Equations; Full Nonlinear Approach 275
18.16 Additional Special Forms of the Equations of Motion 276

Chapter 19 The Elastic Airplane 277
19.1 Aeroelasticity and Stability and Control 277
19.2 Wing Torsional Divergence 278
19.3 The Semirigid Approach to Wing Torsional Divergence 278
19.4 The Effect of Wing Sweep on Torsional Divergence 279
19.5 Aileron Reversal Theories 280
19.6 Aileron Reversal Flight Experiences 281
19.7 Spoiler Ailerons Reduce Wing Twisting in Rolls 282
19.8 Aeroelastic Effects on Static Longitudinal Stability 283
19.9 Stabilizer Twist and Speed Stability 286
19.10 Dihedral Effect of a Flexible Wing 287
19.11 Finite Element or Panel Methods in Quasistatic Aeroelasticity 288
19.12 Aeroelastically Corrected Stability Derivatives 289
19.13 Mean and Structural Axes 289
19.14 Normal Mode Analysis 291
19.15 Quasi-Rigid Equations 291
19.16 Control System Coupling with Elastic Modes 293
19.17 Second-Order Elastic Airplane Models 293
19.18 Concluding Remarks 293

Chapter 20 Stability Augmentation 295
20.1 The Essence of Stability Augmentation 295

20.2	Automatic Pilots in History	296
20.3	The Systems Concept	296
20.4	Frequency Methods of Analysis	297
20.5	Early Experiments in Stability Augmentation	297
	20.5.1 The Boeing B-47 Yaw Damper	298
	20.5.2 The Northrop YB-49 Yaw Damper	299
	20.5.3 The Northrop P-89 Sideslip Stability Augmenter	301
20.6	Root Locus Methods of Analysis	301
20.7	Transfer Function Numerators	302
20.8	Transfer Function Dipoles	302
20.9	Command Augmentation Systems	303
20.10	Superaugmentation, or Augmentation for Unstable Airplanes	304
20.11	The Advent of Digital Stability Augmentation	306
20.12	Practical Problems with Digital Systems	306
20.13	Time Domain and Linear Quadratic Optimization	307
20.14	Linear Quadratic Gaussian Controllers	308
20.15	Robust Controllers—Adaptive Systems	310
20.16	Robust Controllers—Singular Value Analysis	311
20.17	Decoupled Controls	311
20.18	Concluding Remarks	311

Chapter 21 Flying Qualities Research Moves with the Times **313**

21.1	Empirical Approaches to Pilot-Induced Oscillations	313
21.2	Compensatory Operation and Model Categories	314
21.3	Crossover Model	316
21.4	Pilot Equalization with the Crossover Model	317
21.5	Algorithmic (Linear Optimal Control) Model	318
21.6	The Crossover Model and Pilot-Induced Oscillations	318
21.7	Neal-Smith Approach	320
21.8	Bandwidth–Phase Delay Criteria	321
21.9	Landing Approach and Turn Studies	322
21.10	Concluding Remarks	322

Chapter 22 Challenge of Stealth Aerodynamics **323**

22.1	Faceted Airframe Issues	323
22.2	Parallel-Line Planform Issues	325
22.3	Shielded Vertical Tails and Leading Edge Flaps	327
22.4	Fighters Without Vertical Tails	327

Chapter 23 Very Large Aircraft **329**

23.1	The Effect of Higher Wing Loadings	329
23.2	The Effect of Folding Wings	329
23.3	Altitude Response During Landing Approach	330

23.4 Longitudinal Dynamics 330
23.5 Roll Response of Large Airplanes 331
23.6 Concluding Remarks 331

Chapter 24 Work Still to be Done **332**

Short Biographies of Some Stability and Control Figures *334*

References and Core Bibliography *341*

Index *360*
