

Workbook of

Second Edition

ATMOSPHERIC DISPERSION ESTIMATES

An Introduction to Dispersion Modeling

with floppy diskette

D. Bruce Turner

LEWIS PUBLISHERS

Contents

Chapter 1.	Introduction - How Does the Atmosphere Disperse Material and What Is a Dispersion Model?	
1.1	Averaging Periods for Data.....	1-1
1.2	Wind.....	1-1
	1.2.1 Effect of Direction.....	1-1
	1.2.2 Effect of Speed.....	1-2
1.3	Effect of Surface Roughness.....	1-3
1.4	Turbulence.....	1-4
	1.4.1 What Is Turbulence?.....	1-4
	1.4.2 Mechanical Turbulence.....	1-4
	1.4.3 Buoyant Generation of Turbulence.....	1-4
1.5	Relation of Turbulence to Vertical Thermal Structure.....	1-4
1.6	Appearance of Continuous Visible Emissions to Vertical Thermal Structure - Plume Types.....	1-6
1.7	What Is a Dispersion Model?.....	1-7
1.8	Why Do We Model?.....	1-7
Chapter 2.	Estimates of Atmospheric Dispersion	
2.1	Assumptions in Gaussian Modeling.....	2-1
2.2	The Gaussian Distribution.....	2-2
2.3	Coordinate System.....	2-2
2.4	Variables and Basic Dispersion Equation.....	2-3
2.5	Derivation of Additional Equations for Specific Situations....	2-6
2.6	Pasquill Stability Class.....	2-7
2.7	Pasquill-Gifford Dispersion Parameters.....	2-8
2.8	Averaging Time of the Pasquill-Gifford Dispersion Parameters.....	2-8
2.9	Determining Groundlevel Concentration with Downwind Distance.....	2-12
2.10	Nomogram for Determination of Distance to Groundlevel Maximum and Maximum Concentration.	2-13
2.11	Accuracy of Estimates.....	2-13
2.12	Determining the Distance to a Concentration Level-of-Concern for a Groundlevel Release.....	2-15
2.13	Treatment of Effect of Mixing Height.....	2-16
2.14	Graphs for Estimates of Downwind Groundlevel Concentrations.....	2-18
2.15	Determining Groundlevel Concentration Isopleths.....	2-27
2.16	Areas Within Isopleths.....	2-38
2.17	Review of Assumptions.....	2-38

Chapter 3. Effective Height of Emission

3.1	Stack-Tip Downwash.....	3-1
3.2	Buoyancy Flux.....	3-2
3.3	Final Rise for Unstable-Neutral Conditions.....	3-2
	3.3.1 Unstable-Neutral Buoyant Rise.....	3-2
	3.3.2 Unstable-Neutral Momentum Rise.....	3-2
3.4	Final Rise for Stable Conditions.....	3-3
	3.4.1 Stable Buoyant Rise.....	3-3
	3.4.2 Stable Momentum Rise.....	3-3
3.5	Final Effective Height.....	3-4
3.6	Gradual Rise.....	3-4
3.7	Distance to Final Rise.....	3-4
3.8	Plume Rise Used in TUPOS.....	3-5

Chapter 4. Special Topics

4.1	Conversion of Concentrations.....	4-1
4.2	Dispersion Using Fluctuation Statistics.....	4-1
4.3	Concentrations in an Inversion Break-Up Fumigation.....	4-2
4.4	Partial Penetration of Plumes Through the Mixing Height.....	4-5
4.5	Concentrations at Groundlevel Compared to Concentrations at the Level of Effective Stack Height from Elevated Continuous Sources.....	4-7
4.6	Total Dosage from a Finite Release.....	4-7
4.7	Crosswind-Integrated Concentrations.....	4-8
4.8	Variation of Concentrations with Sampling Time.....	4-8
4.9	Estimation of Seasonal or Annual Concentrations at a Receptor from a Single Pollutant Source.....	4-10
4.10	Meteorological Conditions Associated with Maximum Concentrations.....	4-11
4.11	Dual Effect of Wind Speed - Maximum Concentrations at the Critical Wind Speed.....	4-12
4.12	Concentrations at a Receptor Point from Several Sources.....	4-12
4.13	Rural and Urban Dispersion Parameters.....	4-12
4.14	Exponent for Power-Law Wind Profiles.....	4-13
4.15	Buoyancy-Induced Dispersion.....	4-15
4.16	Area Sources.....	4-16
4.17	Topography.....	4-17
4.18	Line Sources.....	4-18
4.19	Instantaneous Sources.....	4-19
4.20	Average Concentrations from Instantaneous Sources.....	4-21

Chapter 5. Putting Gaussian Methods Into Perspective

5.1	Where Gaussian Methods Are Less Applicable.....	5-1
5.2	Convective Situations.....	5-1
5.3	Groundlevel Releases.....	5-2

Chapter 6. Using Computers for Dispersion Estimates

Chapter 7. Use of the Computer Diskette

7.1	Installation of the Program.....	7-1
7.2	Running the Program - WKBK2.....	7-1
7.3	The Supplementary Program - SUPL.....	7-3

Chapter 8. Example Problems

Appendix

Floppy Diskette

One 3 1/2" floppy diskette: READ.ME file gives instructions for use.

Contains two executable programs for instructional (not production) use.
