

Air Monitoring for Toxic Exposures

An Integrated Approach

SHIRLEY A. NESS

Contents

Preface, vii

PART I: TYPES OF HAZARDS AND SAMPLING METHODS

- 1 Hazards** 3
Types, 4 Contaminants, 5 Warning Signs, 9 Toxic Exposures, 11 Standards and Guidelines for Air Sampling, 16
Conclusions, 26
- 2 Sampling Methods** 29
Collecting Samples, 29 Determining Specific Needs, 36

PART II: INTEGRATED AIR SAMPLING MEASUREMENTS FOR CHEMICALS

- 3 Overview of Integrated Sampling** 41
Method Selection, 42 Calculation of Minimum and Maximum Sample Volumes, 43 Adjusting an Integrated Method to Collect Ceiling and TWA Measurements, 44
Sample Handling, 45 Quality Control During Integrated Sampling, 45 What to Expect in a Laboratory Report, 46
Comparing Samples to Standards, 49 Formula for Direct Comparison of Integrated Results with PELs, 50
- 4 Integrated Sampling for Gases and Vapors** 51
Solid Sorbent Sampling, 57 Use of Sorbent Tubes, 63
Impingers, 68 Collecting Integrated Bag Samples, 74
Environmental Sampling for VOCs Using Stainless Steel Canisters, 76 Passive Collectors for Gases and Vapors, 81
Use of Passive Monitors for Occupational Sampling, 89 Use of Passive Monitors for Residential and Ambient Monitoring, 90
- 5 Integrated Sampling for Aerosols** 93
Aerosol Descriptions, 94 Aerosol Collection, 95
Particle Size-Selective Sampling, 104 Sampling for Specific Aerosols, 120 Conclusions, 128

6	Special-Case Sampling	131
	Collection Methods for Semivolatile Compounds, 132	
	Collection of Multiple Species: Arsenic, 137 Combustion	
	Processes: Cigarette Smoke Collection, 138 Collection of	
	Mixtures, 140 Gases Adsorbed to Particles, 140	
PART III: REAL TIME MEASUREMENTS		
7	Reading and Recording Real Time Data	145
	Technological Developments, 145 The Black Box, 146	
	Stationary Monitoring Systems, 147 Personal Monitoring, 150	
	Instrument Characteristics, 153 Active and Passive	
	Collection, 156 Hazardous Atmospheres, 156 Calibration	
	and Maintenance of Real Time Instruments, 157 Reading	
	Data, 159 Recording Equipment, 160 Dedicated	
	Printers, 172 Advantages and Disadvantages of Direct Reading	
	Equipment, 172 Conclusions and New Developments, 175	
8	Monitoring Instruments Dedicated to a Single Chemical	179
	Detection Principles: Electrochemical Sensors, 180	
	Limitations of Electrochemical Sensors, 187 Calibration and	
	Maintenance of Electrochemical Units, 188 Tape-Based	
	Monitors, 190 Other Detection Principles, 191 Specific	
	Chemicals, 191	
9	General Survey Instruments for Gases and Vapors	204
	Measurement of Explosive Atmospheres: Combustible Gas	
	Indicators, 206 Interpretation of Measurements of Explosive	
	Atmospheres, 217 Monitoring for Health Hazard Levels of	
	Volatile Organic Compounds: FIDs and PIDs, 220	
	Comparison of FID and PID for General Survey Use, 233	
	Interpretation of General Survey Measurements for Health	
	Hazards, 233 Combination Measurements of Explosive and	
	Health Hazard Levels: Solid-State Sensors, 234	
10	Monitoring Instruments for Many Specific Gases and Vapors: GC and IR	242
	Portable Gas Chromatographs, 242 Infrared Spectro-	
	photometers, 260 The Next Step, 272	
11	Real Time Sampling Methods for Aerosols	274
	Light-Scattering Monitors, 275 Fibrous Aerosol Monitors, 282	
	Particle Mass Measurements with the Piezobalance, 287	
	Comparison of Aerosol Monitoring Instruments, 291	

PART IV: SAMPLING WITH DETECTOR TUBES AND MONITORING FOR AGENTS OTHER THAN CHEMICALS

- 12 Sampling of Gases and Vapors Based on Color Change** 297
 Colorimetric Tubes, 297 Grab Sample Measurements Using
 Detector Tubes, 303 Long-Term Detector Measurements, 310
 Passive Color-Change Monitors, 311 Interpretation of Color-
 Change Measurements, 313
- 13 Radon Measurements** 317
 Environmental Collection Methods for Radon in Air, 318
 Occupational Air Sampling for Radon, 333 Collection
 Method for Radon in Water, 334 Interpretation of Radon
 Measurements, 334 Performing Follow-Up Measurements, 335
- 14 Sampling for Bioaerosols** 338
 Bacteria, 341 Fungus and Molds, 344 Viruses, 344
 Other Microorganisms, 345 Sampling Methods and
 Strategies, 346 Passive Air Sampling, 348 Active Air
 Sampling, 349 Surface Sampling, 358 Bulk Sampling, 359
 Storage and Shipment of Samples, 360 Interpretation of
 Results, 360

PART V: AIR SAMPLING DECISIONS: GATHERING BACKGROUND INFORMATION

- 15 Biological Monitoring** 365
 Advantages and Disadvantages, 368 Method Selection, 369
 Interpretation of Results, 379
- 16 Surface Sampling Methods for Dermal Exposure** 382
 Wipe Sampling, 384 Other Surface Sampling Methods, 391
 Methods That Directly Assess Worker Exposure, 391
 Evaluating Sample Results, 397
- 17 Bulk Sampling Methods** 399
 Purpose, 399 Sample Collection Strategies, 400 Containers
 and Shipping, 402 Personal Protection, 403 Bulk Air
 Samples, 404 Bulk Samples of Solid or Liquid Chemicals, 407
 Soil Sampling, 413 Water Sampling, 417

PART VI: GENERAL INFORMATION FOR THE SAMPLER

18	Survey Preparations and Performance	431
	Surveys Initiated from Within the Workplace, 431	Surveys
	Initiated from Outside the Workplace, 433	Baseline and
	Routine Monitoring Surveys, 434	Hazardous Waste, 434
	Emergency Response, 435	Indoor Air and Community
	Complaints, 435	Other Survey Situations, 435
	Sampling Strategies, 436	Field Work Preparation, 442
	The Walk-Through Survey, 444	Field Work Observations, 445
	When to Reject Sample Results, 447	Practical Considerations, 448
19	Specific Sampling Situations	452
	Confined Space Measurements, 452	Indoor Air Surveys, 454
	Asbestos Abatement Surveys, 470	Industrial Surveys, 475

APPENDIXES

Appendix A:	Pumps and Flow Rate Calibrations	487
	Volume Calibration, 488	Flow Rate Calibrators, 491
	Calibration Program for Pumps, 496	Pump Selection, 505
	Volume Adjustments, 508	
Appendix B:	Gas and Vapor Calibrations	510
	Premixed Gases and Vapors in Cylinders, 512	Static
	Calibration Mixtures, 513	Gas Permeation Tubes, 518

Index, 523
