

INTRODUCTION TO

ATMOSPHERIC  
CHEMISTRY

DANIEL J. JACOB

---

---

## Contents

<b>Preface</b>	xi
<b>1 – Measures of Atmospheric Composition</b>	<b>3</b>
1.1 Mixing Ratio	3
1.2 Number Density	4
1.3 Partial Pressure	8
<i>Further Reading</i>	11
<b>Problems</b>	11
1.1 <i>Fog Formation</i>	11
1.2 <i>Phase Partitioning of Water in Cloud</i>	11
1.3 <i>The Ozone Layer</i>	11
<b>2 – Atmospheric Pressure</b>	<b>14</b>
2.1 Measuring Atmospheric Pressure	14
2.2 Mass of the Atmosphere	14
2.3 Vertical Profiles of Pressure and Temperature	16
2.4 Barometric Law	18
2.5 The Sea-Breeze Circulation	21
<b>Problems</b>	22
2.1 <i>Scale Height of the Martian Atmosphere</i>	22
2.2 <i>Scale Height and Atmospheric Mass</i>	22
<b>3 – Simple Models</b>	<b>24</b>
3.1 One-Box Model	25
3.1.1 <i>Concept of Lifetime</i>	25
3.1.2 <i>Mass Balance Equation</i>	27
3.2 Multibox Models	30
3.3 Puff Models	33
<b>Problems</b>	36
3.1 <i>Atmospheric Steady State</i>	36
3.2 <i>Ventilation of Pollution from the United States</i>	37
3.3 <i>Stratosphere-Troposphere Exchange</i>	37
3.4 <i>Interhemispheric Exchange</i>	39
3.5 <i>Long-Range Transport of Acidity</i>	39
3.6 <i>Box versus Column Model for an Urban Airshed</i>	40
3.7 <i>The Montreal Protocol</i>	40

<b>6 – Geochemical Cycles</b>	87
6.1 Geochemical Cycling of Elements	87
6.2 Early Evolution of the Atmosphere	89
6.3 The Nitrogen Cycle	90
6.4 The Oxygen Cycle	94
6.5 The Carbon Cycle	97
6.5.1 <i>Mass Balance of Atmospheric CO<sub>2</sub></i>	97
6.5.2 <i>Carbonate Chemistry in the Ocean</i>	97
6.5.3 <i>Uptake of CO<sub>2</sub> by the Ocean</i>	100
6.5.4 <i>Uptake of CO<sub>2</sub> by the Terrestrial Biosphere</i>	104
6.5.5 <i>Box Model of the Carbon Cycle</i>	105
<i>Further Reading</i>	107
<b>Problems</b>	107
6.1 <i>Short Questions on the Oxygen Cycle</i>	107
6.2 <i>Short Questions on the Carbon Cycle</i>	108
6.3 <i>Atmospheric Residence Time of Helium</i>	108
6.4 <i>Methyl Bromide</i>	109
6.5 <i>Global Fertilization of the Biosphere</i>	111
6.6 <i>Ocean pH</i>	111
6.7 <i>Cycling of CO<sub>2</sub> with the Terrestrial Biosphere</i>	112
6.8 <i>Sinks of Atmospheric CO<sub>2</sub> Deduced from Changes     in Atmospheric O<sub>2</sub></i>	113
6.9 <i>Fossil Fuel CO<sub>2</sub> Neutralization by Marine CaCO<sub>3</sub></i>	113
<b>7 – The Greenhouse Effect</b>	115
7.1 Radiation	118
7.2 Effective Temperature of the Earth	121
7.2.1 <i>Solar and Terrestrial Emission Spectra</i>	121
7.2.2 <i>Radiative Balance of the Earth</i>	122
7.3 Absorption of Radiation by the Atmosphere	126
7.3.1 <i>Spectroscopy of Gas Molecules</i>	126
7.3.2 <i>A Simple Greenhouse Model</i>	128
7.3.3 <i>Interpretation of the Terrestrial Radiation Spectrum</i>	131
7.4 Radiative Forcing	133
7.4.1 <i>Definition of Radiative Forcing</i>	133
7.4.2 <i>Application</i>	135
7.4.3 <i>Radiative Forcing and Surface Temperature</i>	137
7.5 Water Vapor and Cloud Feedbacks	138
7.5.1 <i>Water Vapor</i>	138
7.5.2 <i>Clouds</i>	140
7.6 Optical Depth	140
<i>Further Reading</i>	142

<b>Problems</b>	142
7.1 <i>Climate Response to Changes in Ozone</i>	142
7.2 <i>Interpretation of the Terrestrial Radiation Spectrum</i>	143
7.3 <i>Jupiter and Mars</i>	144
7.4 <i>The "Faint Sun" Problem</i>	144
7.5 <i>Planetary Skin</i>	145
7.6 <i>Absorption in the Atmospheric Window</i>	145
<b>8 - Aerosols</b>	146
8.1 Sources and Sinks of Aerosols	146
8.2 Radiative Effects	148
8.2.1 <i>Scattering of Radiation</i>	148
8.2.2 <i>Visibility Reduction</i>	150
8.2.3 <i>Perturbation to Climate</i>	151
Further Reading	154
<b>Problems</b>	155
8.1 <i>Residence Times of Aerosols</i>	155
8.2 <i>Aerosols and Radiation</i>	155
<b>9 - Chemical Kinetics</b>	157
9.1 Rate Expressions for Gas-Phase Reactions	157
9.1.1 <i>Bimolecular Reactions</i>	157
9.1.2 <i>Three-Body Reactions</i>	158
9.2 Reverse Reactions and Chemical Equilibria	159
9.3 Photolysis	160
9.4 Radical-Assisted Reaction Chains	161
Further Reading	163
<b>10 - Stratospheric Ozone</b>	164
10.1 Chapman Mechanism	164
10.1.1 <i>The Mechanism</i>	164
10.1.2 <i>Steady-State Solution</i>	166
10.2 Catalytic Loss Cycles	171
10.2.1 <i>Hydrogen Oxide Radicals (<math>HO_x</math>)</i>	171
10.2.2 <i>Nitrogen Oxide Radicals (<math>NO_x</math>)</i>	172
10.2.3 <i>Chlorine Radicals (<math>ClO_x</math>)</i>	177
10.3 Polar Ozone Loss	179
10.3.1 <i>Mechanism for Ozone Loss</i>	181
10.3.2 <i>PSC Formation</i>	183
10.3.3 <i>Chronology of the Ozone Hole</i>	185
10.4 Aerosol Chemistry	187
Further Reading	191

<b>Problems</b>	191
10.1 <i>Shape of the Ozone Layer</i>	191
10.2 <i>The Chapman Mechanism and Steady State</i>	191
10.3 <i>The Detailed Chapman Mechanism</i>	192
10.4 <i>HO<sub>x</sub>-Catalyzed Ozone Loss</i>	193
10.5 <i>Chlorine Chemistry at Midlatitudes</i>	193
10.6 <i>Partitioning of Cl<sub>y</sub></i>	195
10.7 <i>Bromine-Catalyzed Ozone Loss</i>	196
10.8 <i>Limitation of Antarctic Ozone Depletion</i>	197
10.9 <i>Fixing the Ozone Hole</i>	198
10.10 <i>PSC Formation</i>	199
<b>11 – Oxidizing Power of the Troposphere</b>	200
11.1 The Hydroxyl Radical	201
11.1.1 <i>Tropospheric Production of OH</i>	201
11.1.2 <i>Global Mean OH Concentration</i>	203
11.2 Global Budgets of CO and Methane	205
11.3 Cycling of HO <sub>x</sub> and Production of Ozone	207
11.3.1 <i>The OH Titration Problem</i>	207
11.3.2 <i>CO Oxidation Mechanism</i>	207
11.3.3 <i>Methane Oxidation Mechanism</i>	210
11.4 Global Budget of Nitrogen Oxides	212
11.5 Global Budget of Tropospheric Ozone	215
11.6 Anthropogenic Influence on Ozone and OH	216
<i>Further Reading</i>	219
<b>Problems</b>	219
11.1 <i>Sources of CO</i>	219
11.2 <i>Sources of Tropospheric Ozone</i>	220
11.3 <i>Oxidizing Power of the Atmosphere</i>	221
11.4 <i>OH Concentrations in the Past</i>	223
11.5 <i>Acetone in the Upper Troposphere</i>	223
11.6 <i>Transport, Rainout, and Chemistry in the Marine                 Upper Troposphere</i>	225
11.7 <i>Bromine Chemistry in the Troposphere</i>	227
11.8 <i>Nighttime Oxidation of NO<sub>x</sub></i>	228
11.9 <i>Peroxyacetylnitrate (PAN) as a Reservoir for NO<sub>x</sub></i>	229
<b>12 – Ozone Air Pollution</b>	231
12.1 Air Pollution and Ozone	231
12.2 Ozone Formation and Control Strategies	233
12.3 Ozone Production Efficiency	240
<i>Further Reading</i>	242

x - CONTENTS

<b>Problems</b>	242
12.1 $\text{NO}_x$ - and Hydrocarbon-Limited Regimes for Ozone Production	242
12.2 Ozone Titration in a Fresh Plume	243
<b>13 - Acid Rain</b>	245
13.1 Chemical Composition of Precipitation	245
13.1.1 Natural Precipitation	245
13.1.2 Precipitation over North America	246
13.2 Sources of Acids: Sulfur Chemistry	249
13.3 Effects of Acid Rain	250
13.4 Emission Trends	252
<b>Problems</b>	253
13.1 What Goes Up Must Come Down	253
13.2 The True Acidity of Rain	253
13.3 Aqueous-Phase Oxidation of $\text{SO}_2$ by Ozone	253
13.4 The Acid Fog Problem	254
13.5 Acid Rain: The Preindustrial Atmosphere	255
<b>Numerical Solutions to Problems</b>	257
<b>Appendix. Physical Data and Units</b>	259
<b>Index</b>	261
