Tayfun Tezduyar

Modeling, Mesh Generation, and Adaptive Numerical Methods for Partial Differential Equations

Springer-Verlag

CONTENTS

Foreword	xiii
Preface	xv
Workshop schedule	xxi
List of participants	xlix

WEEK 1

NURBS and grid generation	1
<i>Robert E. Barnhill, Gerald Farin, and Bernd Hamann</i>	
Coping with degeneracies in Delaunay triangulation	23
<i>Isabel Beichl and Francis Sullivan</i>	
Geometric approaches to mesh generation	31
<i>Christoph M. Hoffmann</i>	
Refining quadrilateral and brick element meshes	53
<i>Robert Schneiders and Jürgen Debye</i>	
Automatic meshing of curved three—dimensional domains: Curving finite elements and curvature-based mesh control	67
<i>Mark S. Shephard, Saikat Dey, and Marcel K. Georges</i>	

WEEK 2

Optimization of tetrahedral meshes	97
<i>Eric Brière de l'Isle and Paul Louis George</i>	
A class of error estimators based on interpolating the finite element solutions for reaction-diffusion equations	129
<i>Tao Lin and Hong Wang</i>	
Accuracy-based time step criteria for solving parabolic equations	153
<i>Rabi Mohtar and Larry Segerlind</i>	

WEEK 3

Adaptive domain decomposition methods for advection-diffusion problems	165
<i>Claudio Carlenzoli and Alfio Quarteroni</i>	

WEEK 3 CONTINUED

- L^p -posteriori error analysis of mixed methods for linear and
quasilinear elliptic problems 187
Zhangxin Chen
- A characteristic-Galerkin method for the Navier-Stokes equations
in thin domains with free boundaries 201
Giovanni M. Cornetti
- Parallel partitioning strategies for the adaptive solution of
conservation laws 215
*Karen D. Devine, Joseph E. Flaherty, Raymond M. Loy, and
Stephen R. Wheat*
- Adaptive multi-grid method for a periodic heterogeneous
medium in $1 - D$ 243
Jacob Fish and Vladimir Belsky
- A knowledge-based approach to the adaptive finite element
analysis 267
Kamyar Haghighi and Eun Kang
- An asymptotically exact, pointwise, a posteriori error estimator
for the finite element method with super convergence properties 277
Jens Huggør
- A mesh-adaptive collocation technique for the simulation of
advection-dominated single- and multiphase transport phenomena
in porous media 307
Manfred Koch
- Three-step H - P adaptive strategy for the incompressible
Navier-Stokes equations 347
J. Tinsley Oden, Weihai Wu, and Mark Ainsworth
- Applications of automatic mesh generation and adaptive
methods in computational medicine 367
J.A. Schmidt, C.R. Johnson, J.C. Eason, and R.S. MacLeod
- Solution of elastic-plastic stress analysis problems by the
 p -version of the finite element method 395
Barna A. Szabó, Ricardo L. Actis, and Stefan M. Holzer

WEEK 3 CONTINUED

Adaptive finite volume methods for time-dependent P.D.E.S. 417

J. Ware and M. Berzins

Superconvergence of the derivative patch recovery technique
and *a posteriori* error estimation 431

Zhimin Zhang and J.Z. Zhu
