

FRACTAL GEOMETRY

Mathematical Foundations
and Applications

KENNETH FALCONER

Contents

Preface	ix
Introduction	xiii
Notes and references	xxii
PART I FOUNDATIONS	
Chapter 1. Mathematical background	3
1.1 Basic set theory	3
1.2 Functions and limits	6
1.3 Measures and mass distributions	10
1.4 Notes on probability theory	16
1.5 Notes and references	23
Exercises	23
Chapter 2. Hausdorff measure and dimension	25
2.1 Hausdorff measure	25
2.2 Hausdorff dimension	28
2.3 Calculation of Hausdorff dimension—simple examples	31
*2.4 Equivalent definitions of Hausdorff dimension	32
*2.5 Finer definitions of dimension	33
2.6 Notes and references	34
Exercises	34
Chapter 3. Alternative definitions of dimension	36
3.1 Box-counting dimensions	38
3.2 Properties and problems of box-counting dimension	44
*3.3 Modified box-counting dimensions	45
*3.4 Packing measures and dimensions	47
3.5 Some other definitions of dimension	49
3.6 Notes and references	52
Exercises	53

Chapter 4. Techniques for calculating dimensions	54
4.1 Basic methods	54
4.2 Subsets of finite measure	62
4.3 Potential theoretic methods	64
4.4 Fourier transform methods	66
4.5 Notes and references	67
Exercises	68
Chapter 5. Local structure of fractals	69
5.1 Densities	69
5.2 Structure of 1-sets	73
5.3 Tangents to s -sets	77
5.4 Notes and references	81
Exercises	81
Chapter 6. Projections of fractals	83
6.1 Projections of arbitrary sets	83
6.2 Projections of s -sets of integral dimension	86
6.3 Projections of arbitrary sets of integral dimension	88
6.4 Notes and references	90
Exercises	90
Chapter 7. Products of fractals	92
7.1 Product formulae	92
7.2 Notes and references	100
Exercises	100
Chapter 8. Intersections of fractals	101
8.1 Intersection formulae for fractals	102
8.2 Sets with large intersection	104
8.3 Notes and references	109
Exercises	110
PART II APPLICATIONS AND EXAMPLES	
Chapter 9. Fractals defined by transformations—self-similar and self-affine sets	113
9.1 Iterated function schemes	113
9.2 Dimensions of self-similar sets	117
9.3 Some variations	123
9.4 Self-affine sets	126
9.5 Applications to encoding images	132
9.6 Notes and references	136
Exercises	136

Chapter 10. Examples from number theory	138
10.1 Distribution of digits of numbers	138
10.2 Continued fractions	139
10.3 Diophantine approximation	141
10.4 Notes and references	144
Exercises	144
Chapter 11. Graphs of functions	146
11.1 Dimensions of graphs	146
*11.2 Autocorrelation of fractal functions	155
11.3 Notes and references	158
Exercises	159
Chapter 12. Examples from pure mathematics	161
12.1 Duality and the Kekeya problem	161
12.2 Vitushkin's conjecture	164
12.3 Convex surfaces	165
12.4 Groups and rings of fractional dimension	167
12.5 Notes and references	168
Exercises	169
Chapter 13. Dynamical systems	170
13.1 Repellers and iterated function schemes	171
13.2 The logistic map	173
13.3 Stretching and folding transformations	177
13.4 The solenoid	182
13.5 Continuous dynamical systems	184
*13.6 Small divisor theory	188
*13.7 Liapounov exponents and entropies	191
13.8 Notes and references	194
Exercises	195
Chapter 14. Iteration of complex functions—Julia sets.	197
14.1 General theory of Julia sets	197
14.2 Quadratic functions—the Mandelbrot set	204
14.3 Julia sets of quadratic functions	208
14.4 Characterisation of quasi-circles by dimension	217
14.5 Newton's method for solving polynomial equations	219
14.6 Notes and references	222
Exercises	223
Chapter 15. Random fractals	224
15.1 A random Cantor set	224
15.2 Fractal percolation	231
15.3 Notes and references	235
Exercises	235

Chapter 16. Brownian motion and Brownian surfaces	237
16.1 Brownian motion	237
16.2 Fractional Brownian motion	245
16.3 Stable processes	248
16.4 Brownian surfaces	250
16.5 Notes and references	252
Exercises	253
Chapter 17. Multifractal measures	254
17.1 A multifractal formalism	255
17.2 Notes and references	264
Exercises	264
Chapter 18. Physical applications	265
18.1 Fractal growth	267
18.2 Singularities of electrostatic and gravitational potentials	272
18.3 Fluid dynamics and turbulence	273
18.4 Notes and references	276
Exercises	277
References	278
Index	284

FRACTAL GEOMETRY

Mathematical Foundations and Applications

Kenneth Falconer, *School of Mathematics, University of Bristol, UK*

This book provides an accessible treatment of the mathematics of fractals and their dimensions. It is aimed at those wanting to use fractals in their own areas of mathematics or science. The first part of the book covers the general theory of fractals and their geometry. Results are stated precisely, but technical measure theoretic ideas are avoided and difficult proofs are sketched or omitted. The second part contains a variety of examples and applications in mathematics and physics.

About the author

Kenneth Falconer took his MA and PhD degrees at Cambridge University and was Research Fellow at Corpus Christi College, Cambridge, from 1977 to 1980. He then joined Bristol University where he is now a Reader. He was Visiting Professor at Oregon State University, USA, in 1985–6 and has lectured widely in Britain and abroad. He has published *The Geometry of Fractal Sets* (Cambridge University Press 1985) as well as more than 40 research papers, largely on fractals, geometric measure theory, and the geometry of convex sets.

Cover photograph. Part of the Julia set of $f(z) = z^2 + 0.233 + 0.5378i$, with the Fatou set coloured according to escape rate.
