Essential Visual J++ 6.0 *fast*

How to develop Java
applications and applets with
Visual J++

Springer

Contents

1 WHY USE VISUAL J++?	1
Introduction	1
What this book covers.....	2
What you need to run Visual J++	2
What's new in version 6	3
Conventions	3
2 THE VISUAL J++ ENVIRONMENT	5
Introduction	5
The Visual J++ environment.....	5
The Project Explorer	7
The Task List window	8
The Toolbox, Design window and Properties window.....	9
The standard toolbar	10
Customizing your environment	12
Moving on.....	12
3 CREATING APPLICATIONS AND APPLETS.....	13
Introduction	13
Applets and applications.....	13
Creating an application	14
Running the application outside the IDE	17
Creating an applet.....	17
Adding new files to a project.....	20
Copying projects	20
What comes next?	21
4 THE JAVA LANGUAGE	22
Introduction	22
Java conventions.....	22
Names in Java	23
Primitive data types	23
Arrays	24
Arithmetic in Java.....	25
Assigning values	27
Additional integer operators	28

5 JAVA CLASSES	30
Introduction	30
Object orientation – a design approach	30
Classes and objects	31
Encapsulation	31
Inheritance	32
Polymorphism	32
Creating classes and objects	33
The bank account hierarchy.....	33
Implementing the hierarchy in Java.....	34
Instantiating objects – what's new?	36
Using variables and methods.....	37
Using the classes.....	37
Using methods.....	38
Instance and class variables	41
6 MAKING DECISIONS	43
Introduction	43
If...else statements	43
Comparison operators.....	45
Block statements.....	45
Switch statements	46
Looping constructs	47
While loops.....	47
Do loops	47
For loops.....	48
Quitting loops	48
7 JAVA OPERATORS	50
Introduction	50
Logical operators	50
Bitwise operators	51
Operator precedence.....	53
Using strings in Java.....	54
Assigning characters, strings and boolean variables	55
Assigning objects.....	56
Comparing objects.....	56
8 CONSTRUCTORS AND OVERLOADING	58
Introduction	58
Setting initial values	58
Constructors.....	59
Passing data to constructors.....	60
Overloading methods.....	60

Overloading constructors	61
The <i>finalize</i> method	62
Using <i>this</i>	62
Class and instance variables.....	62
Static methods.....	64
Constant values	64
9 INHERITANCE AND POLYMORPHISM.....	66
Introduction	66
Using inheritance	66
Polymorphism.....	71
Abstract classes.....	71
Final methods and classes.....	72
Interfaces.....	72
Access control.....	73
10 EVENT HANDLING.....	74
Introduction	74
The <code>MouseListener</code> interface	74
The <code>Scribbling</code> applet.....	77
The <code>KeyAdaptor</code> class.....	80
The <code>DrawingLines</code> applet.....	81
11 THE ABSTRACT WINDOWING TOOLKIT.....	84
Introduction	84
The AWT class hierarchy	84
The <code>Button</code> Class.....	85
Which button was pressed?.....	87
The <code>Checkbox</code>	89
Displaying text.....	91
The <code>Label</code> class	91
The <code>TextField</code> class.....	92
Using two listeners.....	96
The <code>TextArea</code> class	97
The <code>List</code> class	98
The <code>Scrollbar</code> class.....	101
The <code>Canvas</code> class.....	105
Previewing component layout	106
12 THE LAYOUT MANAGERS.....	107
Introduction	107
Layout policies.....	107
The <code>BorderLayout</code> class	108
The <code>CardLayout</code> class	109

Overloading constructors	61
The <i>finalize</i> method	62
Using <i>this</i>	62
Class and instance variables.....	62
Static methods.....	64
Constant values	64
9 INHERITANCE AND POLYMORPHISM.....	66
Introduction	66
Using inheritance	66
Polymorphism.....	71
Abstract classes.....	71
Final methods and classes.....	72
Interfaces.....	72
Access control.....	73
10 EVENT HANDLING.....	74
Introduction	74
The <i>MouseListener</i> interface	74
The <i>Scribbling</i> applet.....	77
The <i>KeyAdaptor</i> class.....	80
The <i>DrawingLines</i> applet.....	81
11 THE ABSTRACT WINDOWING TOOLKIT.....	84
Introduction	84
The AWT class hierarchy	84
The <i>Button</i> Class.....	85
Which button was pressed?.....	87
The <i>Checkbox</i>	89
Displaying text.....	91
The <i>Label</i> class	91
The <i>TextField</i> class.....	92
Using two listeners.....	96
The <i>TextArea</i> class	97
The <i>List</i> class	98
The <i>Scrollbar</i> class.....	101
The <i>Canvas</i> class.....	105
Previewing component layout	106
12 THE LAYOUT MANAGERS.....	107
Introduction	107
Layout policies.....	107
The <i>BorderLayout</i> class	108
The <i>CardLayout</i> class	109

The FlowLayout class.....	113
The GridLayout class	114
The GridBagLayout class	115
13 THE CONTAINER CLASS.....	119
Introduction	119
The Container class	119
The Panel class	120
The Frame class	121
The Dialog class	125
The FileDialog class	130
Using menus	131
Handling menu events	133
Sub-menus, separators and other menu features.....	134
14 THE WINDOWS FOUNDATION CLASSES.....	136
Introduction	136
Creating a Windows application.....	136
Using the application wizard	138
WFC controls.....	143
Adding controls to the design form	143
Moving and resizing controls	145
Changing control properties at design time	145
Customizing the Toolbox	147
Aligning controls.....	148
Using the WFC	149
15 USING THE WINDOWS FOUNDATION CLASSES.....	150
Introduction	150
The Control class	150
The Font class	151
Handling events	153
The Label and Edit classes	154
The Button class	156
The CheckBox, RadioButton and GroupBox classes	158
The Panel class	160
The ComboBox Class.....	161
The ListBox and CheckedListBox class.....	163
The HScrollBar and VScrollBar classes.....	164
The PictureBox class	165
The Timer and TrackBar classes	166
The MainMenu control.....	168
16 THE GRAPHICS CLASS.....	171

Introduction	171
The co-ordinate system.....	171
Drawing lines and text.....	172
Drawing rectangles	172
Plain and 3D rectangles	173
Round cornered rectangles.....	174
Drawing polygons.....	175
Drawing ovals and arcs.....	176
Using colours	177
Changing colours	178
Working with fonts	179
Finding available fonts.....	181
Using images	182
Displaying images.....	183
17 HANDLING EXCEPTIONS.....	186
Introduction	186
The Exception class	186
Trying and catching	187
Catching multiple exceptions.....	189
Creating new exceptions	190
The finally block.....	190
Throwing without catching.....	191
18 THE VISUAL J++ DEBUGGER.....	192
Introduction	192
Three types of errors	192
Compiler and linker errors.....	193
Runtime errors	193
Logic errors.....	193
Setting breakpoints	193
Assigning conditions to breakpoints	195
What happens at breakpoints?	196
Leaving a breakpoint	197
19 USING FILES	199
Introduction	199
The System class.....	199
The InputStream and OutputStream classes	201
Copying a file	201
The FilterOutputStream class	202
The BufferedOutputStream class	203
The DataOutputStream class.....	203
The PrintStream class	207
The FilterInputStream class	207

The BufferedInputStream class	207
The DataInputStream class	208
The LineNumberInputStream class	210
The PushbackInputStream class	210
20 CREATING DATABASE APPLICATIONS	212
Introduction	212
The Data Forms Wizard	212
INDEX	219
