Advances in Solid State Physics

Volume 42

Available Online

Advances in Solid State Physics is part of the Springer LINK service. For all customers with standing orders for Advances in Solid State Physics we offer the full text in electronic form via LINK free of charge. Please contact your librarian who can receive a password for free access to the full articles by registration at:

<http://link.springer.de/orders/index.htm>

If you do not have a standing order you can nevertheless browse through the table of contents of the volumes and the abstracts of each article at:

<http://link.springer.de/series/assp/>

There you will also find more information about the series.

Contents

Part I. Quantum Dots

High Magnetic Fields in Semiconductor Nanostructures: Spin Effects in Single InAs Quantum Dots

U. Zeitler, I. Hapke-Wurst, D. Sarkar, R. J. Haug, H. Frahm, K. Pierz,
and A. G. M. Jansen 3

- 1. Sample Preparation 4
- 2. Resonant Tunnelling 5
- 3. Zeeman Splitting 6
- 4. Fermi-Edge Singularities 9
- 5. Conclusion 11
- References 12

On the Way to the II-VI Quantum Dot VCSEL

Thorsten Passow, Matthias Klude, Carsten Kruse, Karlheinz Leonardi,
Roland Kröger, Gabriela Alexe, Kathrin Sebald, Sven Ulrich,
Peter Michler, Jürgen Gutowski, Heidrun Heinke, and Detlef Hommel ... 13

- 1. Conventional ZnSe-Based Edge Emitting Laser Diodes 13
- 2. Optimization of CdSe Quantum Dot Structures
for Application in a Laser Diode 14
 - 2.1. Quantum Dot Formation in the System CdSe/ZnSe 14
 - 2.2. Proof for Quantum Dots 17
 - 2.3. Optimization of CdSe Quantum Dot Stacks 17
 - 2.4. Optical Gain in CdSe Quantum Dot Stacks 18
 - 2.5. Electrically Pumped CdSe Quantum Dot Laser Diode 19
 - 2.6. Comparison of Quantum-Dot and Quantum-Well Laser Diodes .. 20

3. Distributed Bragg Reflectors and Microcavities	21
3.1. High-Reflectivity Distributed Bragg Reflectors Using ZnSe/MgS Superlattices	21
3.2. Monolithic Microcavities	22
4. Summary	24
References	24

ZnCdSe Quantum Structures Growth, Optical Properties and Applications

Martin Strassburg, O. Schulz, Matthias Strassburg, U. W. Pohl, R. Heitz, A. Hoffmann, D. Bimberg, M. Klude, D. Hommel, K. Lischka, and D. Schikora	27
--	----

1. Quantum Dots in the Active Region: 0D Localisation and Mobility of Excitons	28
2. Optimisation of p-Contacts and p-Claddings	32
3. Optical Confinement	34
4. Conclusions	35
References	36

Part II. Optics

Photonic Crystals: Optical Materials for the 21st Century

K. Busch, A. Garcia-Martin, D. Hermann, L. Tkeshelashvili, M. Frank, and P. Wölffe	41
---	----

1. Introduction	41
2. Photonic Band Structure Computation	43
3. Defect Structures in Photonic Crystals	46
4. Nonlinear Photonic Crystals	49
5. Conclusions	51
References	52

Quantum Optical Effects in Semiconductors

W. Hoyer, M. Kira, and S. W. Koch	55
1. Theory	56
2. Correlated Photons in Quantum-Well Emission	59
2.1. Multiple Quantum-Well Systems	61
3. Quantum Effects in Microcavity Emission	63

4. Summary 65
 References 66

Beryllium Chalcogenides: Interface Properties and Potential for Optoelectronic Applications

V. Wagner, J. Geurts, and A. Waag 67

1. Introduction 67
 2. Optoelectronic Applications 70
 3. ZnSe/BeTe Interfaces 72
 3.1. Structural Properties 72
 3.2. Optical Properties 73
 3.3. Type-II LEDs 74
 4. CdSe/BeTe Interfaces 75
 5. Summary and Outlook 77
 References 78

ZnO MOVPE

A. Waag, Th. Gruber, Ch. Kirchner, D. Klarer, K. Thonke,
 R. Sauer, F. Forster, F. Bertram, and J. Christen 81

1. Introduction 81
 2. Experimental Details 82
 3. Results and Discussion 83
 4. Conclusions 89
 References 90

Part III. Electron and Spin Transport

Electrical Spin Injection from Ferromagnetic Metals into GaAs

Manfred Ramsteiner, Haijun Zhu, Atsushi Kawaharazuka,
 Hsin-Yi Hao, and Klaus H. Ploog 95

1. Introduction 95
 2. Experimental Approach 96
 2.1. Sample Design 96
 2.2. Magneto-Electroluminescence 96
 2.3. Time-Resolved Photoluminescence 97

3. Injection from Fe into GaAs	97
4. Injection from MnAs into GaAs	101
5. Spin Relaxation Times	103
6. Spin Injection Model	105
7. Conclusions	105
References	106

**Probing the Conduction Channels
of Gold Atomic-Size Contacts:**

Proximity Effect and Multiple Andreev Reflections

E. Scheer, W. Belzig, Y. Naveh, and C. Urbina	107
---	-----

References	118
------------------	-----

Metal-Insulator Transitions at Surfaces

Michael Potthoff	121
------------------------	-----

1. Surface Phase Transitions	121
2. Metal-Insulator Transitions	122
3. Surface States	123
4. Mott Transition	124
5. Mean-Field Approach	125
6. Critical Regime	127
7. Conclusions	130
References	131

The Role of Contacts in Molecular Electronics

Gianaurelio Cuniberti, Frank Großmann, and Rafael Gutiérrez	133
---	-----

1. Introduction	133
2. Charge Transport on the Molecular Scale	134
3. Method	136
4. Applications to Molecular Devices	138
4.1. Focusing on the Bridge Molecule: Sodium Wires	138
4.2. Focusing on the Leads: Carbon Nanotube Leads	140
4.3. Focusing on the ‘Molecule Plus Lead’ Complex: A Pure Carbon Device	144
5. Discussion and Conclusions	146
References	147

**Electronic Transport, Spectral Fine Structures,
and Atom Clusters in Quasicrystals and Approximants**

H. Solbrig and C. V. Landauero151

1. Introduction 151

2. Transport Parameters from Spectral Information 152

3. Spectral Fine Structure with Icosahedral Clusters 154

 3.1. Iron Network Generates 100 meV Pseudogap 154

 3.2. Two Types of Narrow Resistivity Peaks 156

 3.3. The *sp*-Character of the Electron States 156

 3.4. Non-Ohmic Resistance Scaling 156

 3.5. Inverse Matthiessen Rule 157

4. Spectral Transport Model of the Quasicrystal 158

 4.1. Lorentzian Resistivity Model 158

 4.2. Transport Parameters of Bulk Quasicrystals 159

5. Conclusions 160

Sensors and the Influence of Process Parameters and Thin Films

Hans-Reiner Krauss	505
1. Introduction	505
2. Design Method	505
3. Examples	506
3.1. Pressure Sensors	506
3.2. Air Quality Sensor	508
3.3. Acceleration Sensor	510
4. Conclusion	512
References	513

Index	515
--------------------	-----

The present volume contains the written versions of most of the invited talks of the Spring Meeting of the Condensed Matter Physics section of the Deutsche Physikalische Gesellschaft held from March 25 to 29, 2002 in Regensburg, Germany. Also contained are those talks presented as part of the Symposia most of which were organized by several divisions in collaboration and covered a fascinating selection of topics of current interest. Thus this volume reflects the status of condensed matter physics in Germany in the year 2002. In particular, one notes a slight change in paradigms: from quantum dots and wires to spin transport and soft matter systems in the broadest sense. This seems to reflect the present general trend in physics. Nevertheless, a large portion of the invited papers concentrate on nanostructured matter.
