**TABLE OF CONTENTS**

|   | <b>Page</b> |
|---|-------------|
| Preface (to the English translation) .....  | v           |
| Preface (to the original French document) .....   | vii         |
| Introduction .....  | ix          |
| List of symbols and definitions .....   | xiii        |
| Table of conversion for SI Units .....  | xix         |
| Contents .....  | xxi         |
| <b>Chapter 1: THE TECHNIQUE USED FOR SOIL NAILED STRUCTURES:<br/>DESCRIPTION AND DEVELOPMENTS .....</b> | <b>1</b>    |
| 1. DESCRIPTION OF THE TECHNIQUE .....   | 1           |
| 1.1. Definition of a soil nailed wall .....   | 1           |
| 1.2. Building phases .....  | 3           |
| 2. HISTORY AND DEVELOPMENT .....  | 5           |
| 2.1. Origins of soil nailing .....  | 5           |
| 2.2. Developments in the use of soil nailing for earth support systems .....                            | 6           |
| 2.3. Soil nailing and patents .....   | 10          |
| 2.4. Advantages and drawbacks .....   | 10          |
| 3. THE FRENCH NATIONAL PROJECT "CLOUTERRE" .....  | 13          |
| 3.1. General background .....   | 13          |
| 3.2. The participants and financing of the project .....  | 13          |
| 3.3. The research program .....   | 13          |
| 3.4. Full-scale tests on soil nailed walls at the CEBTP .....   | 15          |
| <b>BIBLIOGRAPHY .....</b>   | <b>19</b>   |
| <b>Chapter 2: SOIL NAILING IN RETAINING STRUCTURES:<br/>MECHANISMS AND BEHAVIOR .....</b>               | <b>25</b>   |
| 1. PRINCIPLE OF STRUCTURAL BEHAVIOR .....   | 25          |
| 2. SOIL/NAIL INTERACTION .....  | 29          |
| 2.1. Soil/nail friction .....   | 29          |
| 2.1.1. Similarity between skin friction in a fill and an in situ soil .....                             | 29          |
| 2.1.2. Mobilization of skin friction along a nail .....   | 32          |
| 2.1.3. Influence of the type of nail .....  | 35          |
| 2.1.4. Correlations between parameters ( $k_b$ , $q_s$ ) and $p_i$ .....                                | 36          |
| 2.1.5. Influence of moisture content on skin friction .....   | 37          |
| 2.1.6. Mobilization of friction with deformation .....  | 38          |
| 2.2. Lateral earth pressure of nail .....   | 40          |
| 2.2.1. Similarity with piles subjected to horizontal loading .....                                      | 40          |

|        |  |    |
|--------|--|----|
| 2.2.2. | Shear tests on soil reinforced with rigid nails .....                                | 42 |
| 2.2.3. | Influence of the direction of the nails on the mobilization of stresses .....        | 43 |
| 2.2.4. | Mobilization of the tension, shear force, and bending moment .....                   | 46 |
| 3.     | BEHAVIOR OF STRUCTURES .....   | 49 |
| 3.1.   | Distribution of tension in nails and line of maximum tension .....                   | 49 |
| 3.2.   | Stresses in the soil of a soil nailed structure .....                                | 50 |
| 3.3.   | Mobilization of the bending resistance of the nails .....                            | 52 |
| 3.4.   | Deformations and displacements of a soil nailed wall .....                           | 52 |
| 3.4.1. | Internal deformations of walls under in-service stresses .....                       | 52 |
| 3.4.2. | Displacements of the facing .....  | 55 |
| 3.4.3. | Behavior of the wall during construction .....                                       | 56 |
| 3.5.   | Behavior of the facing .....   | 59 |
| 4.     | TYPES OF FAILURE OF SOIL NAILED WALLS .....  | 59 |
| 4.1.   | Failure by breakage of the nails (internal failure) .....                            | 59 |
| 4.2.   | Failure by lack of adherence (internal failure) .....                                | 61 |
| 4.3.   | Failure during excavation phases .....   | 62 |
| 4.3.1. | Failure due to excessive height of continuous excavation<br>(internal failure) ..... | 62 |
| 4.3.2. | Failure by piping of the soil (internal failure) .....                               | 63 |
| 4.4.   | External failure and mixed failure .....   | 63 |
| 5.     | MIXED STRUCTURES .....   | 63 |
| 5.1.   | Soil nailed wall with a row of prestressed anchors at the upper part .....           | 65 |
| 5.2.   | Nailed Tervoile .....  | 65 |
| 5.3.   | Nailed Berlin wall .....   | 65 |
|        | <b>BIBLIOGRAPHY .....</b>  | 69 |
|        | <b>Chapter 3: CONCEPTION AND DESIGN .....</b>  | 73 |
| 1.     | CONCEPTION OF STRUCTURES — CODE OF PRACTICE .....                                    | 73 |
| 1.1.   | Possibilities and limitations of the technique .....                                 | 73 |
| 1.1.1. | Constraints linked to the immediate environment .....                                | 73 |
| 1.1.2. | Special soil conditions .....  | 74 |
| 1.1.3. | Water tables .....   | 75 |
| 1.2.   | Choice of the soil nailing technique .....   | 75 |
| 1.3.   | General geometric layout .....   | 76 |
| 1.3.1. | Facing — elevation and layout plan .....   | 76 |
| 1.3.2. | Length, layout, and angle of installation of the nails .....                         | 78 |
| 1.4.   | Construction provisions .....  | 80 |
| 1.4.1. | Protection against entry of water .....  | 80 |
| 1.4.2. | Embedment of facing toe .....  | 81 |
| 1.4.3. | Aesthetics of the structures .....   | 82 |
| 1.5.   | Mixed structures .....   | 82 |

---

|          |   |     |
|----------|---|-----|
| 1.6.     | Preliminary design .....  | 84  |
| 1.6.1.   | Objectives of preliminary design .....  | 84  |
| 1.6.2.   | Influence of the technology involved and influence<br>of the geometric parameters ..... | 85  |
| 1.6.3.   | Nailing density parameter .....   | 86  |
| 1.6.4.   | Preliminary design charts .....   | 88  |
| 2.       | PRINCIPLES USED WHEN CALCULATING THE DESIGN<br>OF STRUCTURES .....                      | 91  |
| 2.1.     | Analysis of stability .....   | 91  |
| 2.1.1.   | Calculations of deformations .....  | 91  |
| 2.1.2.   | Limit equilibrium methods .....   | 92  |
| 2.1.3.   | Limit equilibrium methods with relative displacements .....                             | 93  |
| 2.2.     | Assessing displacements .....   | 93  |
| 2.3.     | Experimental justifications .....   | 94  |
| 2.3.1.   | Behavior of structures in service and at failure .....                                  | 94  |
| 2.3.2.   | The four failure modes .....  | 96  |
| 2.3.3.   | Justifications based on failure in actual structures .....                              | 96  |
| 2.3.4.   | Simultaneous mobilization of resistances .....  | 97  |
| 2.4.     | French and international contexts .....   | 98  |
| 2.4.1.   | French context .....  | 98  |
| 2.4.2.   | International context .....   | 100 |
| 2.4.2.1. | The German method — Stocker et al., (1979) .....  | 100 |
| 2.4.2.2. | The Shen method, USA (1978) .....   | 101 |
| 2.4.2.3. | Juran design method (1990) .....  | 103 |
| 3.       | GENERAL METHOD FOR STUDYING THE STABILITY<br>OF A SOIL NAILED STRUCTURE .....           | 105 |
| 3.1.     | Limit state design — Assumptions and data .....   | 105 |
| 3.1.1.   | Principles of limit state design .....  | 105 |
| 3.1.1.1. | Basic formula .....   | 105 |
| 3.1.1.2. | How to account for nails and prestressed ground anchors .....                           | 106 |
| 3.1.2.   | Actions .....   | 107 |
| 3.1.2.1. | Types of actions .....  | 107 |
| 3.1.2.2. | Characteristic values of these actions .....  | 108 |
| 3.1.2.3. | Combination of actions and calculations .....   | 110 |
| 3.1.3.   | Resistances .....   | 111 |
| 3.1.3.1. | Failure criteria of materials .....   | 111 |
| 3.1.3.2. | Characteristic values of strength parameters .....                                      | 113 |
| 3.1.3.3. | Calculation values of strengths .....   | 114 |
| 3.1.4.   | Situations .....  | 115 |
| 3.2.     | Calculation methods .....   | 117 |
| 3.2.1.   | Stages of calculation .....   | 117 |
| 3.2.2.   | Determination of nail forces at failure ("multicriteria" rule) .....                    | 117 |
| 3.2.2.1. | Failure criteria and limit equilibrium methods .....                                    | 117 |
| 3.2.2.2. | Combinations of failure criteria .....  | 123 |
| 3.2.2.3. | Rule for determining forces .....   | 124 |

|          |  |     |
|----------|--|-----|
| 3.2.3.   | Calculating the stability of the soil nailed structure .....   | 128 |
| 3.2.4.   | Examples of calculations and design .....  | 130 |
| 3.2.4.1. | Example of the Eparris wall .....  | 130 |
| 3.2.4.2. | Example of CEBTP Experiment No.1 .....   | 133 |
| 3.2.4.3. | Example of a mixed soil nailed wall with surcharges<br>and partial drainage in a layer system .....                    | 136 |
| 3.2.5.   | Simplified methods .....   | 136 |
| 3.2.5.1. | Assumptions .....  | 136 |
| 3.2.5.2. | Conditions of use .....  | 140 |
| 3.3.     | Safety considerations .....  | 140 |
| 3.3.1.   | Practical rules .....  | 140 |
| 3.3.2.   | Illustration .....   | 141 |
| 4.       | <b>JUSTIFYING THE FACING</b> .....   | 141 |
| 4.1.     | Mechanical role of the facing — Modelling for the calculations .....   | 141 |
| 4.2.     | Determining the forces applied on facing .....   | 142 |
| 4.3.     | Design of the facing .....   | 143 |
| 4.4.     | Justifications of the resistance .....   | 144 |
| 4.4.1.   | Justification under bending .....  | 144 |
| 4.4.2.   | Justification of a punching mode of failure around the nail head .....   | 145 |
|          | <b>BIBLIOGRAPHY</b> .....  | 146 |
|          | <b>Appendix 1: CHARTS GIVING THE UNIT SKIN FRICTION <math>Q_s</math><br/>FOR PRELIMINARY DESIGN OF THE NAILS</b> ..... | 149 |
| 1.       | DATA BANK .....  | 149 |
| 2.       | PRELIMINARY DESIGN CHARTS .....  | 151 |
| 3.       | DESIGN METHOD .....  | 152 |
|          | <b>Appendix 2: STABILITY CHARTS FOR PRELIMINARY DESIGN<br/>OF SOIL NAILED WALLS</b> .....                              | 157 |
| 1.       | NAILING DENSITY .....  | 157 |
| 2.       | STABILITY DESIGN CHARTS FOR PRELIMINARY<br>DESIGN OF SOIL NAILED WALLS .....   | 158 |
| 3.       | USING THE CHARTS .....   | 158 |
| 4.       | SAFETY VERIFICATIONS .....   | 162 |
| 4.1.     | Traditional method .....   | 162 |
| 4.2.     | Calculating at ultimate limit state .....  | 162 |

|  |     |
|--|-----|
| <b>Appendix 3: STABILITY OF A WEDGE OF SOIL REINFORCED BY ONE NAIL .....</b> | 163 |
| <b>Chapter 4: INVESTIGATION AND TESTS .....</b>                              | 167 |
| 1. GEOTECHNICAL STUDY .....  | 167 |
| 1.1. Preliminary investigation .....   | 167 |
| 1.2. Soil investigation .....  | 167 |
| 1.3. Laboratory and in situ tests .....                                      | 168 |
| 1.3.1. Cohesionless soils .....  | 169 |
| 1.3.2. Cohesive soils .....  | 169 |
| 1.3.3. Characteristic values of strength parameters .....                    | 170 |
| 1.4. Determination of the soil corrosion potential .....                     | 170 |
| 1.5. Hydrogeological study .....   | 170 |
| 2. NAIL TESTS .....  | 170 |
| 2.1. Tests objective .....   | 170 |
| 2.2. Different types of tests .....  | 170 |
| 2.3. Objectives of the different tests .....                                 | 171 |
| 2.3.1. Preliminary tests .....   | 171 |
| 2.3.2. Conformity tests at the beginning of the construction .....           | 172 |
| 2.3.3. Inspection tests during construction .....                            | 173 |
| 2.4. Contractor's duties .....   | 173 |
| 2.5. Nail tests and reaction forms .....                                     | 173 |
| 2.5.1. Nail tests location .....   | 173 |
| 2.5.2. Reaction forms .....  | 174 |
| 2.5.3. Nail installation for the three types of tests .....                  | 174 |
| 2.6. Nail tests procedure .....  | 175 |
| 2.6.1. Choice of the procedure .....   | 175 |
| 2.6.2. Choice of the maximum load capacity for the nail tests .....          | 176 |
| 2.6.3. Materials and equipment used during tests .....                       | 177 |
| 2.7. Controlled displacement pull-out tests (constant speed) .....           | 178 |
| 2.7.1. Test procedure .....  | 178 |
| 2.7.2. Interpretation of test result .....                                   | 179 |
| 2.7.2.1. Generalities .....  | 180 |
| 2.7.2.2. Behavior of nail under service conditions ( $T_o < T_L$ ) .....     | 182 |
| 2.7.2.3. Behavior of nail at failure $T_o = T_L$ .....                       | 185 |
| 2.7.2.4. Calculations of the unit skin friction $q_s$ .....                  | 186 |
| 2.8. Controlled force tests (creep steps) .....                              | 187 |
| 2.8.1. Procedure for controlled force tests .....                            | 187 |
| 2.8.2. Interpretation of the results of the controlled pull-out test .....   | 188 |
| 2.8.2.1. Drawing of the creep curves .....                                   | 188 |
| 2.8.2.2. Determination of the critical creep tension .....                   | 189 |
| 2.8.2.3. Drawing of the force-displacement curve .....                       | 190 |
| 2.9. Determination of the characteristic limit pull-out force .....          | 190 |

|   |     |
|---|-----|
| <b>BIBLIOGRAPHY .....</b>   | 191 |
| <b>Appendix: CALCULATIONS OF NAIL DISPLACEMENTS .....</b>                           | 193 |
| 1. GENERALITIES .....   | 193 |
| 2. CALCULATIONS OF DISPLACEMENT .....   | 195 |
| 2.1. First phase ( $y_o < y_1$ ) .....  | 195 |
| 2.2. Second phase: at failure .....   | 198 |
| 2.3. Example of a full calculation .....  | 199 |
| <b>Chapter 5: WALL STRUCTURES CONSTRUCTION .....</b>                                | 203 |
| 1. GENERAL PROVISIONS .....   | 203 |
| 1.1. General aspects — Principle governing the construction of the structures ..... | 203 |
| 1.2. Earthworks .....   | 204 |
| 1.3. Choice of an installation method for the inclusions .....                      | 205 |
| 1.4. Selection of the method to be used to lay the concrete of the facing .....     | 206 |
| 1.5. Resources used — Equipment .....   | 206 |
| 1.6. Controls — Monitoring deformations of the structures .....                     | 207 |
| 1.7. Program for the construction of the structures .....                           | 207 |
| 2. CONDUCT OF THE WORK .....  | 208 |
| 2.1. Earthworks .....   | 208 |
| 2.1.1. Height of earthworks .....   | 208 |
| 2.1.2. Special provisions .....   | 210 |
| 2.1.3. Construction time .....  | 211 |
| 2.1.4. Anomalies — Incidents .....  | 213 |
| 2.2. Protection against percolation water .....                                     | 213 |
| 2.3. Installation of inclusions .....   | 214 |
| 2.3.1. Inclusions directly driven into the soil .....                               | 215 |
| 2.3.1.1. Constitution of the inclusions .....                                       | 215 |
| 2.3.1.2. Installation (figure 7) .....  | 215 |
| 2.3.1.3. Blocking the inclusion against (or in) the facing .....                    | 216 |
| 2.3.2. Inclusion secured in a borehole .....  | 216 |
| 2.3.2.1. Characteristics of the inclusions .....                                    | 216 |
| 2.3.2.2. Installation .....   | 217 |
| 2.3.2.3. Attaching the inclusion against the facing .....                           | 220 |
| 2.4. Installation of facing reinforcing bars .....                                  | 220 |
| 2.5. Placing the concrete of the facing .....                                       | 222 |
| 2.5.1. Cast-in-place concrete .....   | 222 |
| 2.5.2. Shotcrete .....  | 223 |
| 2.6. Stability of the facing .....  | 224 |
| <b>REFERENCES .....</b>   | 225 |

|  |            |
|--|------------|
| <b>Chapter 6: DURABILITY OF STRUCTURES .....</b>   | <b>227</b> |
| 1. INTRODUCTION AND AREA OF APPLICATION .....  | 227        |
| 2. CLASSIFYING STRUCTURES ACCORDING TO THEIR PLANNED USE .....   | 228        |
| 3. CLASSIFYING SOILS ACCORDING TO THEIR AGGRESSIVITY .....   | 229        |
| 3.1. Objective and area of application .....   | 229        |
| 3.2. General principles .....  | 229        |
| 3.3. Evaluating the corrosiveness of the soil .....  | 230        |
| 3.3.1. Overall corrosiveness index .....   | 230        |
| 3.3.2. Electrolytic effect of electric currents: "stray" currents .....                                    | 231        |
| 3.4. Determining which characteristics will be used when assessing the<br>the corrosiveness of soils ..... | 231        |
| 3.4.1. Type of soil .....  | 231        |
| 3.4.2. Resistivity .....   | 231        |
| 3.5. Phreatic water table .....  | 232        |
| 3.6. pH .....  | 232        |
| 3.7. Interpreting the results .....  | 232        |
| 4. PROTECTION FOR METALLIC REINFORCEMENTS .....  | 233        |
| 4.1. Generalities .....  | 233        |
| 4.2. Standard steels (elastic limit $\sigma_e \geq 500$ MPa) .....   | 233        |
| 4.2.1. Thickness sacrificed to corrosion .....   | 234        |
| 4.2.2. Protection using plastic sheath .....   | 235        |
| 4.2.3. Galvanization .....   | 235        |
| 4.2.4. Protection with nonmetallic coating .....   | 236        |
| 4.3. High strength steels with a high elastic limit ( $\sigma_e > 500$ MPa) .....                          | 236        |
| 4.4. Alloyed materials and passive steels .....  | 236        |
| 5. REINFORCEMENT PROTECTION USING "SYNTHETIC MATERIALS" .....  | 237        |
| 6. DURABILITY OF THE FACING .....  | 237        |
| 6.1. Concrete facing .....   | 237        |
| 6.2. Facing with steel panels .....  | 238        |
| 6.3. Facing with other materials .....   | 238        |
| 7. PROTECTING THE NAIL HEADS AND AREAS THAT INTERFACE<br>WITH THE FACING .....                             | 239        |
| 7.1. Generalities .....  | 239        |
| 7.2. Types of protection .....   | 240        |
| 8. MONITORING OF THE CORROSION PROCESS .....   | 244        |

| <b>Chapter 7: SPECIFICATIONS AND INSPECTIONS . . . . .</b>  | <b>251</b> |
| 1. SPECIFICATION AND INSPECTION OF MATERIALS . . . . .  | 251        |
| 1.1. Materials used for nail reinforcements . . . . .   | 251        |
| 1.1.1. Metal reinforcements . . . . .   | 251        |
| 1.1.2. Nonmetal bars . . . . .  | 252        |
| 1.2. Procedures and materials for protecting nail bars against corrosion . . . . .  | 253        |
| 1.2.1. Protection for standard steels . . . . .   | 253        |
| 1.2.2. Protection for prestressing steels . . . . .   | 253        |
| 1.3. Grout used for securing the nails . . . . .  | 253        |
| 1.3.1. Specifications for grout components . . . . .  | 253        |
| 1.3.1.1. Cements . . . . .  | 253        |
| 1.3.1.2. Water . . . . .  | 253        |
| 1.3.1.3. Specific ingredients and additives . . . . .   | 254        |
| 1.3.2. Specifications relating to grout mix design . . . . .  | 254        |
| 1.3.3. Checking the quality of the grout . . . . .  | 254        |
| 1.3.3.1. Checking that the grout components conform . . . . .   | 254        |
| 1.3.3.2. Conformity and control tests . . . . .   | 254        |
| 1.3.3.3. Test frequency . . . . .   | 257        |
| 1.4. Concrete bars for the facing . . . . .   | 257        |
| 1.5. Concrete to be used for the facing (shotcrete or cast-in-place) . . . . .  | 258        |
| 1.5.1. Shotcrete . . . . .  | 258        |
| 1.5.1.1. Specifications relating to the concrete mix design . . . . .   | 258        |
| 1.5.1.2. Specifications regarding the mix design (composition and proportions) of fresh concrete . . . . .  | 262        |
| 1.5.1.3. Controlling the quality of the shotcrete . . . . .   | 262        |
| 1.5.2. Cast-in-place concrete . . . . .   | 265        |
| 1.5.2.1. Specifications for the ingredients, composition, and proportions used . . . . .  | 265        |
| 1.5.2.2. Inspecting the quality of the concrete . . . . .   | 265        |
| 1.6. Drainage materials and devices . . . . .   | 265        |
| 1.6.1. Purpose of drainage . . . . .  | 265        |
| 1.6.2. Drainage devices used . . . . .  | 266        |
| 1.6.3. Drainage materials . . . . .   | 266        |
| 2. CONSTRUCTION INSPECTION OF A SOIL NAILED WALL . . . . .  | 267        |
| 2.1. Documents to be produced before work starts . . . . .  | 267        |
| 2.1.1. Document specifying the structural design of the soil nailed wall . . . . .  | 267        |
| 2.1.2. Drainage devices . . . . .   | 267        |
| 2.1.3. Detailed plan showing the various phases involved in the excavation, nailing, and construction of the reinforced concrete facing . . . . . | 267        |
| 2.2. Inspections to be carried out during construction . . . . .  | 267        |
| 2.2.1. Checking conformity of the ground and its hydrogeology with the geotechnical data available . . . . .                                      | 267        |

|          |  |     |
|----------|--|-----|
| 2.2.2.   | Inspecting to ensure that the work conforms with the construction documents .....                | 268 |
| 2.2.2.1. | Installation of the nails .....  | 268 |
| 2.2.2.2. | Planning the various construction phases .....   | 269 |
| 2.2.2.3. | Placing shotcrete .....  | 269 |
| 3.       | PULL-OUT TESTS ON NAILS DURING CONSTRUCTION .....  | 269 |
| 4.       | CHECKING THE BEHAVIOR OF A SOIL NAILED WALL .....  | 270 |
| 4.1.     | Checking the behavior of a soil nailed wall during construction .....                            | 270 |
| 4.1.1.   | The need for inspections .....   | 270 |
| 4.1.2.   | Defining the inspections .....   | 270 |
| 4.1.3.   | Types of inspection and their purposes .....   | 270 |
| 4.1.3.1. | Inspecting for evidence of movements .....   | 270 |
| 4.1.3.2. | Checking the tension in the nails .....  | 271 |
| 4.1.3.3. | Visual inspections of the concrete facing,<br>checking the drainage and piezometric levels ..... | 271 |
| 4.1.4.   | Inspection timetables .....  | 271 |
| 4.2.     | Checking the behavior of the soil nailed wall when it is in service .....                        | 271 |
| 4.2.1.   | The need for inspections .....   | 271 |
| 4.2.2.   | Defining the inspections .....   | 272 |
| 4.2.3.   | Type of inspections and procedures .....   | 272 |
| 4.2.3.1. | Checking for movements .....   | 272 |
| 4.2.3.2. | Checking the tensile forces on the nails .....   | 272 |
| 4.2.3.3. | Inspecting the drainage facilities and piezometric levels .....                                  | 272 |
| 4.2.3.4. | Inspecting the durability of the nails: bar samples<br>for quality control .....                 | 272 |
| 4.2.4.   | Inspection frequency .....   | 273 |
| 4.2.4.1. | Inspecting for displacements of the soil nailed wall<br>and for tension in the nails .....       | 273 |
| 4.2.4.2. | Inspecting the drainage devices .....  | 274 |
| 4.2.4.3. | Inspecting the durability of the structure .....   | 274 |
| 4.2.5.   | Maintaining the drainage network .....   | 274 |
|          | BIBLIOGRAPHY .....   | 275 |
|          | ABBREVIATIONS .....  | 277 |
|          | LEXICON .....  | 281 |
|          | FRENCH STANDARDS WITH CORRESPONDING ISO/ASTM/BSI/DIN .....                                       | 289 |
