CONTENTS

1. Introduction	715
2. Polymer synthesis and general characteristics	716
2.1. Polymer types available	716
2.2. Formation	717
2.3. Properties	717
2.4. Common medical applications	719
3. Modification of polymer surfaces	720
3.1. Characterisation techniques	721
4. Polymer compatibility	723
4.1. Biological characterisation techniques	723
5. Medical applications	724
5.1. Plasma extenders	724
5.2. Artificial organs	724
5.3. Immobilised enzymes	725
5.4. Iron-chelating polymers	726
5.5. Metallobiopolymers	726
5.6. Controlled release polymers	726
5.7. Artificial cells	727
5.8. Microspheres	728
5.9. Polymeric vesicles	728
5.10. Polymeric drugs	729
6. Summary and conclusions	730
References	730

1. INTRODUCTION

The increased demand for polymeric biomaterials and for devices made therefrom is clearly demonstrated by the numbers utilised, the number of
