CONTENTS

Chapter 1—OBSERVATIONS AND PRODUCTION OF STRATIFIED LAYERS IN THE MIDDLE ATMOSPHERE AND LOWER IONOSPHERE (Workshop VI)

Preface	3
<i>Section 1. Middle Atmosphere</i>	
Radar Observations of Stratified Layers in the Mesosphere and Lower Thermosphere (50–100 km) <i>I. M. Reid</i>	7
Thin Stratified Structure of the Middle Atmosphere <i>G. M. Grechko and A. S. Gurvich</i>	21
Turbulence in the Stratified Atmosphere: Recent Theoretical Developments and Experimental Results <i>C. Sidi and F. Dalaudier</i>	25
Some Characteristics of the Turbulent Buoyancy Subrange <i>F. Dalaudier and C. Sidi</i>	37
Discrete Layers of D–Region Ionisation in the High-Latitude Ionosphere <i>P. N. Collis and S. Kirkwood</i>	41
Study of the D–Region Electron Density Ledge over the Dip Equator <i>D. K. Chakrabarty</i>	45
Electrical Stratification in the Middle Atmosphere <i>C. L. Croskey, L. C. Hale and J. D. Mitchell</i>	49
Stratified Layers in the Ionospheric Electron Production Rate Profiles as a Result of High Energy Particle Ionization <i>P. I. Vellinov and L. N. Mateev</i>	53
Stratification Processes in the Atmospheric Sodium Layer: Observations and Theory <i>B. R. Clemesha</i>	59
Lidar Sounding of Mesospheric Sodium in Central Arctic <i>M. L. Chanin, G. F. Tulinov, Y. P. Dudoladov and M. S. Ivanov</i>	71
Airglow Intensity and Temperature Response to Atmospheric Wave Propagation in the Mesopause Region <i>H. Takahashi, Y. Sahai and N. R. Teixeira</i>	77
<i>Section 2. E–Region</i>	
Sporadic E Layers; History and Recent Observations <i>J. D. Whitehead</i>	85
Observations of D– and E–Region Stratifications with Incoherent Scatter Radar <i>A. Huuskonen and T. Turunen</i>	93
Stratifications in the E–Region and their Relations with the Sporadic E _s –Layer and the Neighbouring Ionospheric Parts Under Different Time and Space Conditions <i>K. B. Serafimov</i>	101

Ionisation Layers over the Magnetic Equator During Meteor Shower Days <i>S. P. Gupta</i>	105
Multi-Experiment Studies of Summertime Sporadic E-Layers Using EISCAT <i>P. N. Collis</i>	109
Possible Effects of the Ion Redistribution in the Dynamo Region Caused by Sequential Sporadic E Layers <i>D. P. Grubor</i>	113
An Improved Method for the Determination of Turbulent Parameters Based on Sporadic E <i>P. Bencze</i>	117
<i>Chapter 2—THE MIDDLE ATMOSPHERE AFTER MAP (Symp. 6)</i>	
Indian Programme on Middle Atmosphere: Some Results <i>A. P. Mitra</i>	123
Achievements in the D-Region Studies During MAP <i>A. D. Danilov</i>	133
Equatorial Radar System <i>S. Fukao, T. Tsuda, T. Sato and S. Kato</i>	151
A Perspective of Middle-Atmosphere Dynamics (MAD) Studies at the New International Equatorial Observatory (NIEO) <i>M. D. Yamanaka and S. Fukao</i>	155
The Effect of Stratospheric Dynamics Displayed in Springtime <i>In-Situ</i> Observations of Source Gases at Mid-Latitudes <i>K. Petzoldt, B. Naujokat and U. Schmidt</i>	161
Seasonal Variation of the Temporal Variance of Long-Lived Trace Gases Measured During MAP <i>E. P. Röth and U. Schmidt</i>	167
Evidence of CO ₂ -Induced Progressive Cooling of the Middle Atmosphere Derived from Radio Observations <i>J. Taubenheim, G. von Cossart and G. Entzian</i>	171
MU Radar Observation of a Mesospheric Gravity Wave Breaking Caused by Convective Instability <i>Y. Muraoka, T. Sugiyama, K. Kawahira, T. Sato, T. Tsuda, S. Fukao and S. Kato</i>	175
Estimations of Model Parameters for Gravity Wave Spectra Observed by MST Radar <i>A. O. Scheffler, C. H. Liu and S. J. Franke</i>	179
Picture of the Global Field of "Quasi-Monochromatic" Internal Gravity Waves Observed by Stratospheric Balloons and MST Radars <i>M. D. Yamanaka</i>	185
GLOBMET—The Contributions of Radio Meteor Measurements to the Middle Atmosphere Program <i>R. G. Roper</i>	189
The Meteor Radar as a Tool for Upper Atmosphere Research <i>S. K. Avery</i>	193
Remote Sensing of Atmospheric Aerosols and Noctilucent Clouds from Space <i>O. Avaste, M. Gadsden and R. Rööm</i>	201

Some New Results in the Investigation of the Middle Atmosphere from Space Using the Day-time Horizon Scanning Method <i>R. Rööm, K. Eerme and U. Veismann</i>	205
Middle Atmospheric Electrodynamics During MAP <i>R. A. Goldberg</i>	209
Electrical Properties of the Middle Atmosphere <i>J. D. Mitchell</i>	219
Relativistic Magnetospheric Electrons: Lower Ionospheric Conductivity and Long-Term Atmospheric Variability <i>D. N. Baker, J. B. Blake, R. W. Klebesadel, D. D. Sentman, D. J. Gorney and P. R. Highbie</i>	229
Soviet Contributions Towards MAP/WINE <i>Z. Ts. Rapoport and E. S. Kazimirovsky</i>	235
Plasma Phenomena Observed in the MAP-WINE Campaign <i>M. Friedrich</i>	243
Long-Term Variations in Mid-Latitude Southern Hemisphere Mesospheric Winds <i>G. J. Fraser</i>	247
Turbulent Small-Scale Neutral and Ion Density Fluctuations: First Results of the MAC/EPSILON Campaign <i>F.-J. Lübken, U. von Zahn, T. Blix and E. Thrane</i>	251
Middle Atmosphere Measurements of Small-Scale Electron Density Irregularities and Ion Properties During the MAC/Epsilon Campaign <i>S. P. Blood, J. D. Mitchell and C. L. Croskey</i>	257
Case Study of Modelled and Measured D-Region Plasma Densities <i>M. Friedrich, K. M. Torkar, D. Krankowsky, P. Lämmerzahl, G. Witt and A. Zuber</i>	261
Seasonal Variations of Ozone Trends <i>G. Entzian, K. H. Grasnick and J. Taubenheim</i>	265
Subtropical Middle Atmosphere Dynamics Observed by the Chung Li Radar <i>I. J. Fu, C. H. Liu, J. Röttger and J. K. Chao</i>	269
<i>Chapter 3—THE SPRINGTIME ANTARCTIC OZONE DEPLETION (Workshop VII)</i>	
Quo Vadimus Re the Springtime Antarctic Ozone Depletion? <i>M. J. Rycroft</i>	275
Author Index	279
