## SPECIAL ISSUE IN HONOUR OF THE 75TH BIRTHDAY OF J E ALLEN

### Editorial

R N Franklin

### TOPICAL REVIEW

- R309 The plasma–sheath boundary region**

R N Franklin

### PAPERS

- 2757 The fragmentation of wires by pulsed currents: beyond the first fracture**  
D P Wall, J E Allen and S Molokov
- 2767 Modelling of a wall-stabilized arc subjected to a transverse magnetic field**  
C M Dixon and M T C Fang
- 2774 A two-temperature model for a microwave generated argon plasma jet at atmospheric pressure**  
V K Liau, M T C Fang, J D Yan and A I Al-Shamma'a
- 2784 On the relative roles of neutral transport and plasma transport in the formation of the density pedestal in magnetically confined plasmas**  
P C Stangeby
- 2798 Formation of electrostatic double-layers and electron-holes in a low pressure mercury plasma column**  
G Petraconi and H S Maciel
- 2806 Polarization evolution of radiation propagating in weakly nonuniform magnetized plasma with dissipation**  
S E Segre
- 2811 Kinetic analysis of the collisional plasma–sheath transition**  
K-U Riemann
- 2821 There is no such thing as a collisionally modified Bohm criterion**  
R N Franklin
- 2825 A note on multi-component Tonks–Langmuir problems**  
K-U Riemann
- 2828 Scattering of an ion beam due to Coulomb interactions with charged fine particles**  
H Amemiya and Y Nakamura
- 2837 Transient RF self-bias in electropositive and electronegative plasmas**  
N St J Braithwaite, T E Sheridan and R W Boswell
- 2845 Active control of instabilities for plasma processing with electronegative gases**  
D L Goodman and N M P Benjamin
- 2853 On the motion of particles in a plasma and in plasma sheaths in the absence of external forces**  
B M Annaratone and G E Morfill
- 2859 Floating potential of spherical probes and dust grains in collisional plasmas**  
P Bryant
