822 ANALYTICAL CHEMISTRY

Weighing proteins

New techniques now allow mass spectrometry to be used on biological systems, providing invaluable information on proteins, as Markus von Raumer, Albert Heck and Peter Derrick of the University of Warwick explain.

827 MEDICINAL CHEMISTRY

Novel treatments for asthma

The incidence of asthma is on the increase, and the search is on for new ways of dealing with the disease. Gerry Higgs of Celltech looks at some of the latest developments.

831 BIOCHEMISTRY

Sex and drugs and P450

The enzymes in the P450 family play a number of diverse roles within the body, from governing sexual characteristics to dealing with drugs. David Lewis of the University of Surrey probes the secrets of these catalytic wonders.

835 CHEMICAL HISTORY

Masson Gulland: hydrogen bonding in DNA

But for a simple oversight, Linus Pauling might have beaten Crick and Watson to the structure of DNA. Keith Manchester of the University of Witwatersrand takes a look at the overlooked work of Masson Gulland.
