**CONTENTS**

**Volume 131 Number 2 2004**

- 773 Modelling the spatial distribution of ammonia emissions from seabirds in the UK**  
L.J. Wilson, P.J. Bacon, J. Bull, U. Dragosits, T.D. Blackall, T.E. Dunn, K.C. Hamer, M.A. Sutton, S. Wanless  
*Ammonia emissions from each seabird species were estimated and combined with population distribution data.*
- 187 Phytoavailability and fractionation of copper, manganese, and zinc in soil following application of two composts to four crops**  
V.D. Zheljzkov, P.R. Warman  
*Results suggest that composted municipal solid waste with high Cu and Zn can be used safely with agricultural crops.*
- 197 Trace metal and stable isotope measurements ( $\delta^{13}\text{C}$  and  $\delta^{15}\text{N}$ ) in the harbour porpoise *Phocoena phocoena relicta* from the Black Sea**  
K. Das, L. Holsbeek, J. Browning, U. Siebert, A. Birkun, Jr, J.-M. Bouqueneau  
*Trace metal levels in Black Sea harbour porpoises are lower than levels from the North Sea.*
- 205 Does interspecific competition alter effects of early season ozone exposure on plants from wet grasslands? Results of a three-year experiment in open-top chambers**  
A.E.G. Tonneijck, J. Franzaring, G. Brouwer, K. Metselaar, Th.A. Dueck  
*Interspecific competition between plants from wet grasslands does not alter effects of early season ozone on plant growth in a three-year experiment.*
- 215 Effects of lead-contaminated sediment and nutrition on mallard duckling brain growth and biochemistry**  
E. Douglas-Stroebel, D.J. Hoffman, G.L. Brewer, L. Sileo  
*Ingestion of lead-contaminated sediment and nutrition affects mallard duckling brain growth and biochemistry with respect to oxidative stress and other metabolic alterations.*
- 223 Estimation of apparent rate coefficients for phenanthrene and pentachlorophenol interacting with sediments**  
H.-L. Chen, Y.-X. Chen, Y.-T. Xu, M.-W. Shen  
*A model was used to study time-dependent interactions of phenanthrene and PCP in collected sediments.*
- 233 Comparison of different physiological parameter responses in *Lemna minor* and *Scenedesmus obliquus* exposed to herbicide flumioxazin**  
L. Geoffroy, C. Frankart, P. Eullaffroy  
*Interspecific variations and the nature of parameters both affected toxicity.*
- 243 Metal availability and soil toxicity after repeated croppings of *Thlaspi caerulescens* in metal contaminated soils**  
C. Keller, D. Hammer  
*Repeated croppings with *Thlaspi caerulescens* reduce Cd and Zn availability and toxicity in an acidic soil but not in a calcareous one.*
- 255 Biosensors for detection of mercury in contaminated soils**  
I. Bontidean, A. Mortari, S. Leth, N.L. Brown, U. Karlson, M.M. Larsen, J. Vangronsveld, P. Corbisier, E. Csöregi  
*Whole bacterial cell and protein-based biosensors were effective in assessing mercury in soil samples.*
- 263 Biotransformation of 2,4,6-trinitrotoluene (TNT) by enchytraeids (*Enchytraeus albidus*) in vivo and in vitro**  
S.G. Dodard, J. Powlowski, G.I. Sunahara  
*Enchytraeids transformed TNT in vivo and in vitro, with apparent involvement of bacteria associated with the host organism.*
- 275 Mercury in fish from the Pinchi Lake Region, British Columbia, Canada**  
S.A. Weech, A.M. Scheuhammer, J.E. Elliott, K.M. Cheng  
*Hg concentrations in small (<40 cm) fish from Pinchi Lake, British Columbia, Canada are elevated compared with those from nearby reference lakes.*
