Preface

Fourth International Conference on Urban Air Quality: Measurement, Modelling and Management, 25–28 March 2003

Prague, Czech Republic

Guest Editor

Ranjeet Sokhi

The quality of urban air continues to be a growing concern in terms of health and environmental impacts. Many urban areas are experiencing high levels of air pollution resulting from emissions from a range of sources with traffic being a dominant source in most urban areas. The pollutants once emitted into the atmosphere become transformed through a series of short and transformation processes. This special issue focuses on the case of oxidation of nitrogen oxides and its impact on the chemical composition of the atmosphere. The research in this field requires a wide range of scientific disciplines and requires the development of innovative conceptual, theoretical and practical approaches.
