Special Issue on River Ice Engineering

Brian C. Burrell and Graham K. Holder	ix-x	Preface / Préface
John C. Doering and Michael P. Morris	1-10	A digital image processing system to characterize frazil ice
Frank Weber, Dan Nixon, and Jeff Hurley	11-27	Semi-automated classification of river ice types on the Peace River using RADARSAT-1 synthetic aperture radar (SAR) imagery
K. van Steenis, F.E. Hicks, T.M. Hrudey, and S. Beltaos	28-41	Modelling creep deformation in floating ice
G. Comfort, Y. Gong, S. Singh, and R. Abdelnour	42-68	Static ice loads on dams
Brian Morse et Guy Trudeau	69-76	Agencement de prises d'eau en région nordique
Spyros Beltaos, Sayed Ismail, and Brian C. Burrell	77-88	Midwinter breakup and jamming on the upper Saint John River: a case study
Kathleen D. White	89-100	Review of prediction methods for breakup ice jams
F.E. Hicks and D. Healy	101-112	Determining winter discharge based on hydraulic modeling
Martin Jasek	113-127	Ice jam release surges, ice runs, and breaking fronts: field measurements, physical descriptions, and research needs
Terry D. Prowse and Joseph M. Culp	128-144	Ice breakup: a neglected factor in river ecology
Spyros Beltaos and Brian C. Burrell	145-155	Climatic change and river ice breakup
Regular papers		
Construction engineering		
O.O. Faniran and D.G. Proverbs	159-167	Receiver operating characteristic (ROC) curve analysis of the effectiveness of construction planning efforts in Australia and the United Kingdom

Front cover: Ice jam release due to dislodgement of an ice sheet of limited length and the beginning of an unimpeded ice run on the Porcupine River, Yukon Territory, Canada, May 1995. The river width is approximately 400 m and the flow direction is right to left (see Jasek in this issue, pp. 113-127).

Revue canadienne de génie civil

Volume 30, numéro 1, février 2003

Numéro spécial consacré à l'ingénierie des glaces fluviales

Preface / Préface	
A digital image processing system to characterize frazil ice	
Semi-automated classification of river ice types on the Peace River using RADARSAT-1 synthetic aperture radar (SAR) imagery	
Modelling creep deformation in floating ice	
Static ice loads on dams	
Agencement de prises d'eau en région nordique	
Midwinter breakup and jamming on the upper Saint John River: a case study	
Review of prediction methods for breakup ice jams	
Determining winter discharge based on hydraulic modeling	
Ice jam release surges, ice runs, and breaking fronts: field measurements, physical descriptions, and research needs	
Ice breakup: a neglected factor in river ecology	
Climatic change and river ice breakup	
Articles ordinaires	
Ingénierie de la construction	
Receiver operating characteristic (ROC) curve analysis of the effectiveness of construction planning efforts in Australia and the United Kingdom	

Continued on inside back cover / Suite au verso

Page couverture : Débâcle causée par la rupture d'une couche de glace de taille restreinte et par la dérive des glaces sur la rivière Porcupine, Territoire du Yukon (Canada), mai 1995. La largeur de rivière est environ 400 m. La rivière s'écoule de droite à gauche (voir Jasek dans ce numéro, pp. 113-127).
