

**ORGANOMETALLIC
VAPOR-PHASE
EPITAXY**

Theory and Practice

Gerald B. Stringfellow

Contents

<i>Preface</i>	xi
<i>Glossary of Acronyms Used in Text</i>	xv
<i>Notation for Organometallic Precursor Molecules</i>	xvii
1 Overview of the OMVPE Process	1
1.1 Introduction	1
1.2 Comparison of Epitaxial Techniques	2
1.3 Overview of the OMVPE Growth Process	7
References	13
2 Source Molecules	15
2.1 Introduction	15
2.2 Group II Molecules	25
2.3 Group III Molecules	26
2.4 Group V Sources	29
2.5 Group VI Precursor Molecules	43
2.6 Organometallic Dopant Precursors	50
References	50

3	Thermodynamics	55
3.1	Basic Thermodynamics of Phase Equilibrium	55
3.2	Phase Diagrams	75
3.3	Thermodynamic Driving Force for Epitaxial Growth	106
3.4	Solid Composition	114
3.5	Quaternary Systems	132
	References	134
4	Kinetics	141
4.1	Background	141
4.2	OMVPE Growth Process	153
4.3	Surface Processes	200
	References	208
5	Hydrodynamics and Mass Transport	213
5.1	Introduction	213
5.2	Complete Hydrodynamic Treatment of OMVPE	214
5.3	Boundary-Layer Model	225
5.4	Approximate Analytical Approach for OMVPE Reactors	226
5.5	Application to Reactor Design	230
	References	232
6	Design of the OMVPE Process	235
6.1	Consolidated OMVPE Growth Model	235
6.2	Kinetically Limited Growth	238
6.3	Mid-Temperature, All Pressures	259
6.4	High-Temperature Regime	265
6.5	OMVPE Growth of II/VI Compounds	265
6.6	Design of the Overall Process	272
	References	280

7 Specific Materials	285
7.1 GaAs	286
7.2 AlGaAs	296
7.3 GaInAs and AlInAs	305
7.4 InP	310
7.5 Phosphorus-Containing Materials: GaP, GaInP, and AlGaInP	317
7.6 As/P Alloys	321
7.7 Antimony Compounds	327
7.8 II/VI Semiconductors	333
References	339
8 Superlattice Structures	347
8.1 Conventional OMVPE	348
8.2 Atomic Layer Epitaxy (ALE)	363
References	367
9 Devices	371
9.1 Injection Lasers and LEDs	373
9.2 Photodiodes	380
9.3 Electronic Switching Devices	382
9.4 Solar Cells	387
9.5 Summary	388
References	389
Index	393
