

*Computer Graphics
and Geometric Modeling
for Engineers*

Vera B. Anand

Contents

1 INTRODUCTION

- 1.1 Computer Graphics Applications

2 COMPUTER GRAPHICS HARDWARE

- 2.1 Display Technology and Graphics Systems
 - 2.1.1 Cathode Ray Tube (CRT)
 - 2.1.2 Storage Tube
 - 2.1.3 Vector Refresh Displays
 - 2.1.4 Raster Scan Displays
 - 2.1.5 Advances in Raster Architecture
 - 2.1.6 Color Raster Displays
 - 2.1.7 Flat Panel Displays
- 2.2 Input Devices
- 2.3 Output Devices
- 2.4 New Graphics Technologies

3	COMPUTER GRAPHICS SOFTWARE—STANDARDS	41
3.1	Standardized Graphics Functions	44
3.1.1	Logical Workstations	45
3.1.2	Device Independence	46
3.1.3	Output Functions	47
3.1.4	Input Functions	48
3.1.5	Subpictures	50
3.2	Graphical User Interface	52
4	TWO-DIMENSIONAL COORDINATE GEOMETRY	55
4.1	Representation of Two-Dimensional Geometry	55
4.2	Two-Dimensional Transformations	58
4.2.1	Scaling	58
4.2.2	Translation	59
4.2.3	Rotation	60
4.3	Composite Two-Dimensional Transformations	62
4.4	Other Transformations	64
4.4.1	Reflection	64
4.4.2	Shearing	67
4.5	Engineering Applications	67
5	TWO-DIMENSIONAL VIEWING OPERATIONS	73
5.1	Window-to-Viewport Mapping	75
5.2	Two-Dimensional Clipping	79
5.2.1	Point Clipping	79
5.2.2	Line Clipping	80
5.2.2.1	Cohen–Sutherland Algorithm	81
5.2.2.2	Intersection Calculations and Clipping	84
5.2.2.3	Midpoint Subdivision	86
5.2.2.4	Comparison of Line Clipping Methods	87
5.3	Application Problems	88
6	THREE-DIMENSIONAL COORDINATE GEOMETRY	93
6.1	Coordinate Systems	94
6.2	Representation of Three-Dimensional Geometry	95
6.3	Three-Dimensional Transformations	96
6.3.1	Scaling	96
6.3.2	Translation	99
6.3.3	Rotation	99
6.3.3.1	Rotations About Arbitrary Axes	105
6.3.3.2	Orthogonality Property of Rotation Matrices	113
6.3.4	Other Transformations	118
6.3.4.1	Reflection	118
6.3.4.2	Shearing	122
6.3.5	Coordinate System Transformation	122

7 DATA STRUCTURES FOR COMPUTER GRAPHICS	129
7.1 General Databases	130
7.2 Basic Data Structures for Graphics	132
7.2.1 Static Arrays	132
7.2.2 Representation of Polyhedral Objects Using Static Arrays	134
7.2.3 Structured Data Types	137
7.2.4 Pointers	139
7.2.5 Linked Lists	139
7.2.6 A Note on Recursion	145
7.2.7 Trees	147
8 THREE-DIMENSIONAL VIEWING OPERATIONS	151
8.1 Projections	151
8.1.1 Multiview Orthographic Projections	154
8.1.2 Axonometric Projections	158
8.1.3 Oblique Projections	163
8.1.4 Perspective Projections	165
8.1.4.1 Vanishing Points	169
8.1.4.2 Special Techniques for Producing Perspective Views	170
8.2 The Viewing Pipeline	172
8.3 Three-Dimensional Viewing Parameters	173
8.4 View Volumes	179
8.5 Clipping in Three Dimensions	183
9 VISUAL REALISM	189
9.1 Hidden Line/Surface Removal	190
9.1.1 Visibility of Objects—Depth Comparison	191
9.1.2 Visibility Techniques	192
9.1.3 Examples of Hidden Line/Surface Removal Algorithms	199
9.2 Shading	201
9.3 Color Models	207
9.4 The Rendering Pipeline	209
10 CURVES	213
10.1 Geometric Curve Description	213
10.2 Parametric and Implicit Formulations	214
10.2.1 Implicitization	215
10.3 Conics	218
10.3.1 Circles	219
10.3.2 Ellipses	220

10.4	Interpolation Techniques for Curve Definition	222
10.4.1	Lagrange Polynomial	223
10.4.2	Parametric Cubic	225
10.4.3	Matrix Approach	228
10.4.4	Cubic Spline	230
10.4.5	Summary of Interpolation Functions	237
10.5	Interpolation Versus Approximation	238
10.6	Bezier Curves	239
10.6.1	Matrix Form	244
10.7	B-Spline Curves	246
10.7.1	Uniform Cubic B-Splines	247
10.7.2	Matrix Form	248
10.8	Conversion Between Representations	252
10.9	General B-Spline Representation	254
10.9.1	Uniform/Periodic	255
10.9.2	Nonperiodic	257
10.9.3	Nonuniform	258
10.9.4	B-Spline Recursive Formulation	259
10.9.5	B-Spline Formulation—Highlights	265
10.10	Rational Curves	267
10.11	Application Problems	271
11	SURFACES	289
11.1	Surfaces of Revolution	290
11.2	Sweeping	294
11.3	Free-form Surfaces	298
11.3.1	Parametric Cubic Surfaces	298
11.3.2	Bezier Surfaces	303
11.3.3	B-Spline Surfaces	309
11.3.4	Conversion Between Representations	313
11.3.5	Rational Surfaces	313
11.3.6	Nonuniform Rational B-Spline Surfaces (NURBS)	315
11.4	Application Problems	315
12	SOLID MODELING	327
12.1	Solid Representation	328
12.2	Basics of Solid Modeling Theory	330
12.3	Constructive Solid Geometry—CSG	335
12.4	Boundary Representation—B-rep	339
12.5	Faceted Representation	341
12.6	Sweep Representation	342
12.7	Spatial Enumeration Schemes	343
12.8	Solid Modeling Systems	344
12.9	Recent Advancements in Solid Modeling—NURBS	346
12.10	Feature Modeling	347

12.11 Applications of Solid Modeling to Engineering	348
12.12 Description of a Simple Solid Modeling System	352
12.12.1 Quadric Primitives	353
12.12.2 Faceted Boundary Representation	354
12.12.3 Intersection Calculations	355
12.12.4 Boolean Operations	358
12.12.5 Rendering	358
13 GENERAL ENGINEERING APPLICATIONS	363
13.1 Contouring	363
13.1.1 Grid Interpolation	364
13.1.2 Contouring over Regular Rectangular Grids	366
13.2 Simple Surface Development	372
13.3 Graphical Simulation of an Articulated Robot	373
13.4 Automatic Generation of Finite Element Meshes	378
13.4.1 Simple Procedures for Mesh Generation	378
APPENDIX A OBJECT-ORIENTED GRAPHICS	391
APPENDIX B REVIEW OF VECTOR AND MATRIX ALGEBRA	395
