mental ray Handbooks Vol. 1

RENDERING WITH MENTAL RAY®

 SpringerWienNewYork

Table of Contents

Series Editor's Foreword	1
Introduction	3
Organization of this Book	3
Typesetting Conventions	5
WWW Resources	5
Acknowledgements	6
1 Overview	7
1.1 Photorealistic Rendering	7
1.2 Scenes and Animations	7
1.2.1 Geometric Objects	8
1.2.2 Materials	10
1.2.3 Light Sources	11
1.2.4 Cameras	11
1.3 Shaders	12
1.4 Phenomena	14
1.5 Scanline Rendering and Ray Tracing	14
1.5.1 Transparency, Refractions, and Reflections	15
1.5.2 Shadows	17
1.5.3 Motion Blur	17
1.5.4 Lenses	18
1.6 Caustics, Global Illumination, and Photon Maps	18
1.7 Participating Media	19
1.8 Parallelism	19
1.9 Stages of Image Generation	20
1.10 mental ray Configurations	21
1.11 mental ray Versions	22
2 Scene Construction	25
2.1 A Simple Scene	26
2.2 Anatomy of a Scene	29
3 Cameras	33
3.1 Pinhole Cameras	33
3.2 Image Resolution	33
3.3 Aspect Ratio	34
3.4 Keystone Distortion	35

3.5	Rendering Subwindows	35
3.6	Orthographic Camera	36
3.7	Clipping Planes *	37
3.8	Lenses: Depth of Field	38
3.9	Full Camera Example	40
4	Surface Shading	43
4.1	Color and Illumination	46
4.2	Texture Mapping	51
4.2.1	Texture Projections	52
4.2.1.1	Simple XY Projection	53
4.2.1.2	Repeated XY Projection	55
4.2.1.3	Other Projections	56
4.2.1.4	Texture Vectors	57
4.2.1.5	Texture Generation from Coordinate Spaces	62
4.2.2	Local Textures: Avoiding Network Transfers	63
4.2.3	Memory Mapped Textures: Reducing Memory Usage	64
4.2.4	Aliasing in Unfiltered Textures	66
4.2.5	Simple Filtered Textures: Reducing Texture Aliasing	69
4.2.6	Elliptic Filtered Textures: Even Better Texture Anti-Aliasing	71
4.2.7	Summary: Selecting Optimal Texturing Methods	73
4.2.8	3D Textures	74
4.3	Transparency Mapping	77
4.4	Bump Mapping	79
4.5	Displacement Mapping	83
4.5.1	Displacement Approximation *	86
4.6	Anisotropic Shading	95
4.7	Environment Mapping	99
4.8	Reflection	102
4.9	Transparency and Refraction	107
4.10	Glossy Reflection	110
4.11	Glossy Transmission (Translucency)	112
4.12	Summary of Illumination Models	114
5	Light and Shadow	117
5.1	Point, Spot, and Infinite Lights	119
5.2	Raytraced Shadows	122
5.2.1	Transparent Shadows with Shadow Shaders	124
5.2.2	Soft Shadows with Area Light Sources	125
5.2.3	Shadow Modes: Regular, Sorted, Segmented	129

5.3	Fast Shadows with Shadow Maps	131
5.4	Internals: How Shadows are Computed **	136
5.4.1	Raytraced Shadows	136
5.4.2	Shadow Map Shadows	138
5.5	Shadow Summary and Performance	139
6	Volume Rendering	143
6.1	Global Volumes: Atmospheres and Fog	144
6.2	Local Volumes: Fur, Fire, Smoke	145
6.3	Ray Marching	149
7	Caustics and Global Illumination	155
7.1	Local Illumination vs. Caustics vs. Global Illumination	156
7.2	Diffuse, Glossy, and Specular Reflection and Transmission	157
7.3	Classification of Light Paths	160
7.4	Caustic and Global Illumination Lights	163
7.5	Caustics	165
7.6	Global Illumination	173
7.6.1	Diffuse Global Illumination (Radiosity)	173
7.6.2	Glossy Global Illumination	176
7.6.3	General Global Illumination	178
7.6.4	Final Gathering	181
7.7	Participating Media	184
7.7.1	Volume Caustics	185
7.7.2	Multiple Volume Scattering: Global Illumination in Volumes	190
7.7.3	Global Illumination in Volumes and Surfaces	193
7.8	Frequently Asked Questions	196
7.9	Summary	199
7.10	Performance	202
8	Motion Blur	205
8.1	Motion Transformations	206
8.2	Motion Vectors	208
8.3	Summary and Performance	210
9	Contours	213
9.1	Outline Contours	214
9.2	PostScript Contours	217
9.3	Edge Contours	218
9.4	Contours on Reflections and Refractions	218
9.5	Contours at Color Contrasts	219

9.6	Variable-Width Contours	221
9.7	Glowing Contours	222
9.8	Performance	222
10	Shaders and Phenomena	223
10.1	Declarations	224
10.2	Definitions	227
10.3	Shader Lists	229
10.4	Shader Graphs	230
10.5	Phenomena	233
10.5.1	Phenomenon Interface Assignments	235
10.5.2	Shader and Phenomenon Options	236
10.5.3	Phenomenon Roots	238
10.6	User Data Blocks	240
10.7	Summary and Performance	241
11	Postprocessing and Image Output	243
11.1	Image Types	244
11.2	Frame Buffers	246
11.3	Image Formats	247
12	Geometric Objects **	253
12.1	Vectors and Vertices	256
12.2	Polygonal Geometry	260
12.3	Free-Form Surface Geometry	262
12.3.1	Bases	263
12.3.1.1	Bézier	264
12.3.1.2	B-Spline	264
12.3.1.3	Cardinal	267
12.3.1.4	Basis Matrix	267
12.3.1.5	Taylor	269
12.3.2	Surfaces	269
12.3.3	Rational Surfaces and NURBS	273
12.3.4	Trimming and Holes	275
12.3.5	Special Points and Curves	279
12.3.6	Texture Surfaces	281
12.3.7	Surface Derivatives	283
12.3.8	Approximations	284
12.3.9	Triangle Count and Performance	292
12.3.10	Connections	294
12.3.11	Adjacency Detection and Edge Merging	294

12.4	Procedural Geometry	295
13	Instancing and Grouping	299
13.1	Instances	299
13.2	Instance Groups	301
13.3	Multiple Instancing	301
13.4	Coordinate Spaces	304
14	Inheritance	307
14.1	Material Inheritance	307
14.2	Tagged Material Inheritance	312
14.3	Parameter Inheritance	315
14.4	Object Flag Inheritance	317
15	Incremental Changes and Animations	321
16	Using and Creating Shader Libraries **	327
17	Parallelism	333
17.1	Thread Parallelism	333
17.2	Network Parallelism	334
17.3	Parallelism Efficiency	335
17.4	Balancing Network Rendering	337
17.5	Rendering Animations	338
17.6	Filename Rewriting	339
18	The Options Block	345
18.1	Feature Flags	345
18.2	Rendering Quality and Performance	347
18.3	Shadows	349
18.4	Ray Tracing Control	350
18.5	Global Illumination and Caustics	352
18.6	Scene Modeling	353
18.7	Diagnostic Modes	355
19	Quality and Performance Tuning	357
19.1	Reading the Message Log *	357
19.2	Image Sampling Quality	360
19.3	Ray Tracing vs. Scanline Rendering *	364
19.4	OpenGL Hardware Acceleration *	366
19.5	Tuning BSP Ray Tracing Parameters *	367
19.6	Optimizing Memory Usage *	369

19.7	Address Space Limitations *	374
19.8	Summary: Quality and Performance Checklist	375
19.8.1	Sampling	375
19.8.2	Texture Mapping	375
19.8.3	Light and Shadow	376
19.8.4	Caustics and Global Illumination	376
19.8.5	Geometry Modeling	377
19.8.6	Shaders and Phenomena	377
19.8.7	Networking and Multithreading	377
20	Troubleshooting *	379
20.1	Sampling	379
20.2	Shading	380
20.3	Caustics and Global Illumination	380
20.4	Geometry	381
20.5	System	382
	Color Plates	385
A	Command Line Options	403
A.1	mental ray	403
A.2	Inventor mental ray	413
A.3	Environment Variables *	414
A.4	Image Display: imf_disp	415
A.5	Image Copy: imf_copy	417
A.6	Image Information: imf_info	418
A.7	Image Comparison: imf_diff	418
A.8	Create Shader Skeletons: mkmishader **	419
A.9	Convert Scenes to C: mitoapi **	420
B	The Sphere and Utah Teapot Models	421
B.1	NURBS Sphere	421
B.2	Utah Teapot	423
C	Base Shaders *	429
C.1	Overview	429
C.2	Texture Space Mapping	431
C.3	Environments	436
C.4	Textures	438
C.5	Sample Compositing	442
C.6	Illumination	446

C.7	Data Conversion	451
C.8	Geometry	455
C.9	Photon	457
C.10	Light	459
C.11	Shadow	460
D	Physics Shaders *	463
D.1	Lens Shader: physical_lens_dof	463
D.2	Light Shader: physical_light	464
D.3	Materials	464
D.4	Photon Tracing	467
D.5	Participating Media	467
D.6	Photon Tracing in Participating Media	469
E	Contour Shaders *	471
E.1	Contour Store Shaders	472
E.2	Contour Contrast Shaders	472
E.3	Material Contour Shaders	473
E.4	Contour Output Shaders	481
	Glossary	485
	Bibliography	499
	Index	501
