Preface	xviii

## 1. What Can You Do with a Neural Network? 1

Introduction	1
Existing Applications	2
Adaptive Noise Canceling	3
Mortgage Risk Evaluator	3
Bomb Sniffer	4
GTE Process Monitor	5
Word Recognizer	6
Blower Motor Checker	7
Prototype and Research Activity	7
Airline Marketing Tactician (AMT)	8
Sonar Classifier	8
Bellcore Chip	9
List of Possible Applications	9
Summary	11

## 2. Next Questions: What and Why? 14

What Is a Neural Network?	14
Experiment 1	15
Experiment 2	16
Pattern-Recognition Examples	17
Other Names for Artificial Neural Networks	19
Why Neural Networks Now?	20
Summary	24

## 3. A Brief History of Neural Networks 26

Conception (1890–1949)	26
Gestation (1950s)	27

---

Birth (1956)	28
Early Infancy (late 1950s, 1960s)	28
Excessive Hype	29
Stunted Growth (1969–1981)	30
Late Infancy (1982–Present)	30
Who Are the Key Players?	32
Summary	34

#### **4. How Do Neural Networks Work? 36**

Anthropomorphism: The Biological Metaphor	36
A Simple Neuron	37
<i>Nerve Structures and Synapses</i>	38
<i>Synapse Activity</i>	39
Computers and the Brain	40
<i>Machines, Not Brains</i>	41
Neural Network Activities	42
The Basic Components	43
A Single Processing Element	43
<i>Inputs and Outputs</i>	44
<i>Weighting Factors</i>	45
<i>Neuron Functions</i>	46
<i>Activation Functions</i>	46
<i>Transfer Functions</i>	47
<i>Learning Functions</i>	48
Combining Elements	49
Combining Layers	50
<i>Connectivity Options</i>	50
<i>Filters</i>	52
An Illustration: NETtalk	53
A Simple Hardware Illustration	54
Programmer Tasks	55
Summary	56

#### **5. What Are Neural Networks Like? 59**

Mathematical Basis	59
Inherent Parallelism	60
Storing Knowledge	61
Example: Pac-Man	62
Fault Tolerance	64
Adaptability	64

Learning	65
<i>Example: Forklift Robot</i>	65
Self-Organizing	66
<i>Example: Nakano's Robots</i>	66
Generalization	66
Training	67
Pattern Recognition	67
<i>Example: NestorWriter</i>	68
Incomplete Patterns	68
Appropriate Tasks	69
Types of Problems Addressed	71
Limitations and Concerns	74
Other Concerns	76
Summary	77

## **6. How Do Neural Networks Relate to Other Technologies? 79**

Statistical Methods	79
Artificial Intelligence	83
Similarities and Differences	84
Competitors or Complements?	88
Neural Networks as Expert Systems	88
<i>Example: Handling Field Service Requests</i>	91
Whole Brain Approach	92
Hybrid Technologies	96
Summary: A Maturation	100

## **7. How Many Ways Can You Organize a Neural Network? 103**

Neurodynamics	103
Inputs	104
Outputs	107
Transfer Functions	107
Weighting Schemes	109
Architecture	109
Number of Processing Elements	110
Number of Layers	110
<i>Example: The XOR Problem</i>	111
Number and Type of Interconnections	112
Other Implementation Variables	113
The Right Paradigm	114
What Are Some of the Neural Network Paradigms?	115

Perceptron	115
ADALINE/MADALINE	116
Brain-State-in-a-Box	119
Hopfield Network	120
Back Propagation	121
Self-Organizing Maps	123
Summary	124

## **8. How Do Neural Networks Learn? 128**

The Basic Learning Mechanism	129
Learning Modes	132
Supervised Learning	132
Unsupervised Learning	132
Learning Rates	133
Training Techniques	135
Learning Laws	136
Hebb's Rule	137
The Delta Rule	137
Gradient Descent Rule	137
Kohonen's Learning Law	137
Back Propagation Learning	138
Grossberg Learning	139
Drive-Reinforcement Theory	140
Other Learning Techniques	141
Architecture and Learning Paradigms	142
Typical Equations Used in Neural Networks	146
Research Areas	146
Summary	150

## **9. How Do You Move from Theory to Applications? 152**

Getting Started: One Approach	152
Preparing the Network Data	154
Five Network Applications on a PC	155
Loan Approval	156
Image Processing	159
<i>Neural Network Output Interpretation</i>	163
<i>Comments on Interpreting the Imaging Network Output File</i>	163
Semiconductor Etch Process	166
<i>Description of the Process</i>	166

<i>Some Definitions</i>	167
<i>Inputs</i>	167
<i>Training</i>	169
<i>Second Input Training Set for the Same Etch Problem</i>	169
Using a Neural Network for Statistical Analysis	170
<i>Description of the Problem</i>	170
<i>Constructing the Training Set</i>	171
<i>Developing a Network</i>	171
<i>Interpreting the Results</i>	172
<i>Neural Network Inversion</i>	172
<i>Comparisons: Neural Networks versus Statistical Methods</i>	172
Semiconductor Curing Furnace Neural Network	173
<i>Description of the Problem</i>	175
<i>Constructing the Training Set</i>	175
<i>Results</i>	178
Comparing Network Applications	179
Size	180
Speed	181
Training	182
Testing	182
<i>Subsequent Analysis</i>	186
<i>Recognition-Curve Network Test</i>	187
Back Propagation Mathematics: How to Computer a Neural Network Manually	189
Implementing Your Network	192
Computer Simulation	192
Executable Code	193
Embedded Neural Networks	194
Summary and Recommendations	194
<b>10. How Are Neural Networks Being Implemented?</b>	<b>197</b>
Introduction	197
Terminology	198
Size	199
Speed	200
Software Simulations	200
Emulation within Parallel Architecture	201
Neurocomputers	203
General-purpose Neurocomputers	204
Special-purpose Hardware	205

Mark III, Mark IV, and Mark V	205
Early Neurocomputers	206
Networks on a Chip	206
The Encephalon Project	209
Silicon Retinas	211
Optical Neural Networks	212
Optoelectronics	213
Holographic Implementations	214
Biological Computers	217
Synergistic Efforts	217
Summary	218

## 11. What Is the Current Research? 221

Introduction	221
Issues and Problems	222
Learning/Training	222
<i>Autonomous Learning</i>	223
<i>Research on Learning</i>	224
Improving Computational Models	228
<i>Neurobiological Research</i>	228
<i>Neuroscience Network Projects</i>	229
<i>Matching Architecture and Paradigms to Applications</i>	231
<i>Martingale Research</i>	233
<i>Justification and Audit Trail</i>	234
<i>Analyzing Hidden Layers</i>	235
<i>Speech Recognition</i>	236
<i>Size and Scaling Issues</i>	237
Emerging Directions	237
Speed and Storage Improvements	238
Integration with Current Technology	239
<i>Robotics Applications</i>	239
<i>Chemistry and Medicine</i>	240
<i>Other Fields</i>	241
Development of Tools	241
Education	241
Consulting Services	244
Summary	244

## 12. Where Do We Go from Here? 247

Introduction	247
Are Neural Networks Intelligent?	248

---

What Is Intelligence?	248
How Do We Measure Intelligence?	249
Mathematics and Pattern Matching	250
Neural Network Implications	251
Why Use Neural Nets?	251
Review of Advantages	252
New Horizons	253
Human/Machine Interfaces	254
New Companies, New Products	254
New Technologies	258
Concerns	260
Beware the Hype	263
Distortions	263
Predictions	264
Summary and Opinions	266
Probabilities	266
Possibilities	268
One Last Comparison	270
<b>Afterword</b>	273
<b>Appendix</b>	
A: Your Interactive Neural Network Disk	279
B: Bibliography and Reading List	294
C: Selected Mathematics	311
D: Simulation of a Processing Element on Lotus 1-2-3	318
Index	332
