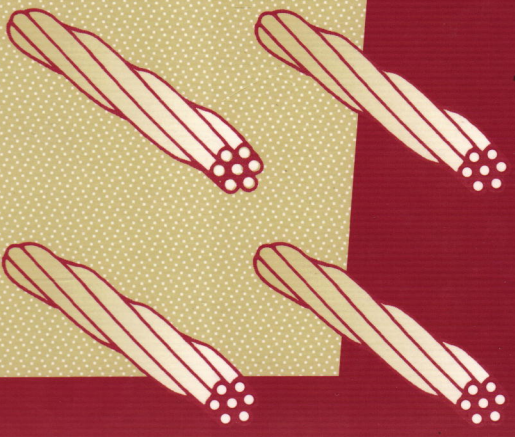
Prestressed Concrete Design

Second edition

M.K. Hurst



E & FN SPON
An Imprint of Routledge

First edition published 1988
by E & FN Spon, an imprint of Chapman & Hall
Reprinted 1995

This edition published 1998
by E & FN Spon, an imprint of Routledge
11 New Fetter Lane, London EC4P 4EE

Simultaneously published in the USA and Canada
by Routledge
29 West 35th Street, New York, NY 10001

Contents

Preface xi

Symbols xii

1 Basic principles **1**
1.1 Introduction 1
1.2 Methods of prestressing 6
1.3 Structural behaviour 9
1.4 Internal equilibrium 12
1.5 Deflected tendons 16
1.6 Integral behaviour 18
1.7 Forces exerted by tendons 19
1.8 Loss of prestress force 23
1.9 Degrees of prestressing 24
1.10 Safety 25
Problems 25

2 Properties of materials **29**
2.1 Strength of concrete 29
2.2 Modulus of elasticity of concrete 30
2.3 Creep of concrete 32
2.4 Shrinkage of concrete 32
2.5 Lightweight concrete 34
2.6 Steel for prestressing 34
2.7 Relaxation of steel 36
2.8 Stress–strain curves for steel 37
2.9 Corrosion of steel 40

3 Limit state design **42**
3.1 Introduction 42
3.2 Limit states 42
3.3 Characteristic loads and strengths 44

3.4 Partial factors of safety 46
3.5 Stress–strain curves 48
3.6 Loading cases 49
3.7 Allowable stresses 51
3.8 Fire resistance 51
3.9 Fatigue 53
3.10 Durability 54
3.11 Vibration 55

4 Loss of prestress force **57**
4.1 Introduction 57
4.2 Elastic shortening 58
4.3 Friction 61
4.4 Anchorage draw-in 67
4.5 Variation of initial prestress force along a member 67
4.6 Long-term losses 70
4.7 Total prestress losses 73
4.8 Measurement of prestress force 73
4.9 Initial overtensioning 76
Problems 76

5 Analysis of sections **79**
5.1 Introduction 79
5.2 Serviceability limit state 80
5.3 Additional steel stress due to bending 83
5.4 Post-cracking behaviour 84
5.5 Ultimate load behaviour 86
5.6 Variation of steel stress 90
5.7 Design ultimate strength 91
5.8 Simplified concrete stress block 94
5.9 Design charts 94
5.10 Untensioned reinforcement 96
5.11 Cracked members 97
5.12 Members with unbonded tendons 100
Problems 103

6 Deflections **107**
6.1 Limits to deflection 107
6.2 Short-term deflections of uncracked members 108
6.3 Long-term deflections 112
6.4 Deflections of cracked members 113
6.5 Load balancing 117
6.6 Load–deflection curves 118
Problems 119

7 Shear **120**
7.1 Introduction 120
7.2 Design shear resistance 120

8 Prestressing systems and anchorages **126**
8.1 Pretensioning systems 126
8.2 Post-tensioning systems 127
8.3 Bursting forces in anchorage zones 133
8.4 Transmission lengths in pretensioned members 138

9 Design of members **142**
9.1 Introduction 142
9.2 Basic inequalities 142
9.3 Design of prestress force 146
9.4 Magnel diagram 149
9.5 Cable zone 151
9.6 Minimum prestress force 154
9.7 Ultimate strength design 156
9.8 Cracked members 157
9.9 Choice of section 161
9.10 Flow charts for design 162
9.11 Detailing 163
Problems 166

10 Composite construction **170**
10.1 Introduction 170
10.2 Serviceability limit state 170
10.3 Ultimate strength 174
10.4 Horizontal shear 176
10.5 Vertical shear 179
10.6 Deflections 180
10.7 Differential movements 182
10.8 Propping and continuity 186
10.9 Design of composite members 188
Problems 189

11 Indeterminate structures **191**
11.1 Introduction 191
11.2 Secondary moments 191
11.3 Linear transformation and concordancy 200
11.4 Ultimate load behaviour 204
Problems 208

12 Prestressed flat slabs **211**
12.1 Introduction 211
12.2 Two-way load balancing 211
12.3 Equivalent-frame analysis 214
12.4 Design and detailing 217
12.5 Ultimate strength 225
12.6 Shear resistance 227

13 Design examples **234**
13.1 Introduction 234
Example 13.1 235
Example 13.2 243

Solutions to problems **252**

Bibliography **254**

Index **256**
