

SECOND EDITION

BEN NOBLE / JAMES W. DANIEL

CONTENTS

	Preface	xi
	Common Notation	xvi
1	Matrix Algebra	1
	 1.1 Introduction, 1 1.2 Equality, addition, and multiplication by a scalar, 3 1.3 The multiplication of matrices, 6 1.4 The inverse matrix, 14 1.5 The partitioning of matrices, 21 Miscellaneous exercises 1, 24 	
2	Some Simple Applications of Matrices	30
	2.1 Introduction, 30 2.2 A Markov-chain example, 31 2.3 A simple model of growth, 39	

List and Transferred administration of the country of the

3 Simultaneous Linear Equations and Elementary Operations 3.1 Introduction, 66 3.2 The method of Gauss (or successive) elimination, 67 3.3 The existence of solutions for a set of equations: Some examples, 76 3.4 Row operations to simplify matrices and sets of equations, 80 3.5 Row-echelon form and rank, 88 3.6 Solution sets for equations; the Fredholm Alternative, 91 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179 6.3 The choice of pivots in elimination, 184		 2.4 A plane pin-jointed framework, 43 2.5 Production planning, 51 2.6 The method of least squares, 57 Miscellaneous exercises 2, 63 	
3.2 The method of Gauss (or successive) elimination, 67 3.3 The existence of solutions for a set of equations: Some examples, 76 3.4 Row operations to simplify matrices and sets of equations, 80 3.5 Row-echelon form and rank, 88 3.6 Solution sets for equations; the Fredholm Alternative, 91 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179	3		66
3.2 The method of Gauss (or successive) elimination, 67 3.3 The existence of solutions for a set of equations: Some examples, 76 3.4 Row operations to simplify matrices and sets of equations, 80 3.5 Row-echelon form and rank, 88 3.6 Solution sets for equations; the Fredholm Alternative, 91 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179		3.1 Introduction 66	
Some examples, 76 3.4 Row operations to simplify matrices and sets of equations, 80 3.5 Row-echelon form and rank, 88 3.6 Solution sets for equations; the Fredholm Alternative, 91 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 177 6.1 Introduction, 177 6.2 Gauss elimination, 179		3.2 The method of Gauss (or successive) elimination, 67	
3.4 Row operations to simplify matrices and sets of equations, 80 3.5 Row-echelon form and rank, 88 3.6 Solution sets for equations; the Fredholm Alternative, 91 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
3.6 Solution sets for equations; the Fredholm Alternative, 3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 177 6.1 Introduction, 177 6.2 Gauss elimination, 179		3.4 Row operations to simplify matrices and sets of equations, 80	
3.7 Inverses of matrices, 95 Miscellaneous exercises 3, 97 4 Vectors and Vector Spaces 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 177 6.1 Introduction, 177 6.2 Gauss elimination, 179		3.5 Row-echelon form and rank, 88	
4.1 Geometrical vectors in three-dimensional space, 102 4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
4.1 Geometrical vectors in three-dimensional space, 102 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133	4	Vectors and Vector Spaces	102
 4.2 General vector spaces, 107 4.3 Linear dependence and independence, 112 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133		4.1 Geometrical vectors in three-dimensional space, 102	
 4.4 Basis and dimension, 118 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133			
 4.5 Matrices, rank, basis, and dimension, 123 4.6 Vector norms, 130 4.7 Inner products and orthogonality, 133			
 4.7 Inner products and orthogonality, 133 Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 150 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 177 6.1 Introduction, 177 6.2 Gauss elimination, 179 			
Miscellaneous exercises 4, 143 5 Matrices and Linear Transformations 150 5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 177 6.1 Introduction, 177 6.2 Gauss elimination, 179			
5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6.1 Introduction, 177 6.2 Gauss elimination, 179			
5.1 Linear transformations, 150 5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6.1 Introduction, 177 6.2 Gauss elimination, 179			M. C
5.2 Equations and inverses, 154 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6.1 Introduction, 177 6.2 Gauss elimination, 179	5	Matrices and Linear Transformations	150
 5.3 Norms of matrices and linear transformations, 163 5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170			
5.4 Inverses of perturbed matrices, 168 5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6.1 Introduction, 177 6.2 Gauss elimination, 179		5.2 Equations and inverses, 154	
5.5 Condition of linear equations, 170 Miscellaneous exercises 5, 174 6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
6 Practical Solution of Systems of Equations 6.1 Introduction, 177 6.2 Gauss elimination, 179			
6.1 Introduction, 177 6.2 Gauss elimination, 179		Miscellaneous exercises 5, 174	
6.1 Introduction, 177 6.2 Gauss elimination, 179	6	Practical Solution of Systems of Equations	177
6.2 Gauss elimination, 179			
		6.2 Gauss elimination, 179 6.3 The choice of pivots in elimination, 184	

	Contents	□ix
6.5	Solving slightly modified systems, 191 Determinants, 198 Determinantal representation of solutions and inverses, 205 Miscellaneous exercises 6, 209	
Line	ear Programming	213
7.2 7.3 7.4	The simplex method: An example, 213 The general linear program, 220 The simplex method in general, 225 Complications for the simplex method, 232 Duality, 244 Miscellaneous exercises 7, 253	
Eige	envalues and Eigenvectors: An Overview	256
8.2 8.3 8.4 8.5	Introduction, 256 Definitions and basic properties, 263 Eigensystems, decompositions, and transformations, 271 Similarity transformations, 278 Unitary matrices and transformations, 282 The condition of eigensystems, 289 Miscellaneous exercises 8, 295	epet n ve
	tary Transformations, Eigensystems, Applications	301
9.2 9.3 9.4 9.5 9.6	Introduction, 301 Schur decomposition or canonical form, 302 Eigensystems of normal matrices, 307 The QR decomposition, 315 The singular-value decomposition, 323 Least squares and the generalized inverse, 330 Analyzing influential factors in experiments, 342 Miscellaneous exercises 9, 346	

	 7.1 The simplex method: An example, 213 7.2 The general linear program, 220 7.3 The simplex method in general, 225 	
	7.4 Complications for the simplex method, 232	
	7.5 Duality, 244 Miscellaneous exercises 7, 253	
8	Eigenvalues and Eigenvectors: An Overview	256
	8.1 Introduction, 256	
	 8.2 Definitions and basic properties, 263 8.3 Eigensystems, decompositions, and transformations, 271 8.4 Similarity transformations, 278 	
	8.5 Unitary matrices and transformations, 282	
	8.6 The condition of eigensystems, 289 Miscellaneous exercises 8, 295	
9	Unitary Transformations, Eigensystems,	
	and Applications	301
	9.1 Introduction, 301	
	9.2 Schur decomposition or canonical form, 3029.3 Eigensystems of normal matrices, 307	
	9.4 The QR decomposition, 315	
	9.5 The singular-value decomposition, 323 9.6 Least squares and the generalized inverse, 330	
	9.7 Analyzing influential factors in experiments, 342 Miscellaneous exercises 9, 346	
10	Similarity Transformations, Eigensystems, and Applications	351
	and Applications	
	10.1 Introduction, 351 10.2 Defective matrices: Examples and their meanings, 353	
	10.3 Jordan form of an $n \times n$ matrix, 358	
	10.4 Jordan form and eigensystems of general matrices, 367	

7 Linear Programming

x Contents	
10.5 Discrete system evolution and powers of matrices, 374 10.6 Iterative solution of linear equations, 383 10.7 Continuous system evolution and matrix exponentials, 393 Miscellaneous exercises 10, 403	
11 Quadratic Forms and Variational Principles	408
11.1 Introduction, 408	
11.2 A geometric example, 410	
11.3 General quadratic forms, 418	
11.4 Definite quadratic forms, 425 11.5 Extremizing quadratic forms: Rayleigh's Principle, 429	
11.6 Extremizing quadratic forms: The Min-max Principle, 436	
Miscellaneous exercises 11, 442	
Appendix 1 Hints and Answers to Selected Exercises	447
Appendix 2 Bibliography	459
Index to Numbered Statements	465
