Parables for Preachers

BEN NOBLE

Contents

1 Matrix Algebra 1

1.1 Introduction 1
1.2 Equality, addition, and multiplication by a scalar 2
1.3 The multiplication of matrices 4
1.4 The inverse matrix 11
1.5 The partitioning of matrices 18
Miscellaneous exercises 22

2 Some Simple Applications of Matrices 26

2.1 Introduction 26
2.2 A plane pin-jointed framework 27
2.3 The application of digital computers to framework calculations 35
2.4 The method of least squares 39
2.5 A Markov chain example 46
Miscellaneous exercises 54

3 Simultaneous Linear Equations and Elementary Operations 62

3.1 Introduction 62
3.2 The method of successive elimination 63
3.3 The existence of solutions for a set of equations 70
3.4 Reduction of a system of equations to a simplified form 74
3.5 The existence of solutions for a set of equations 76
3.6 Equivalence of sets of equations 78
3.7 Elementary row operations and the row-echelon normal form 80
3.8 Uniqueness of the row-echelon form 86
3.9 Theorems on the existence of solutions for a set of equations 90
Miscellaneous exercises 92

4 Linear Dependence and Vector Spaces 95

4.1 Geometrical vectors in three-dimensional space 95
4.2 Linear dependence and independence of vectors 98
4.3 Vector spaces 104
4.4 Basis and dimension 106
4.5 Examples on basis and dimension 111
4.6 A standard form for a basis 114
4.7 Basis and dimension (continued) 116
4.8 Linear equations with an "infinity of solutions" 119
Miscellaneous exercises 124

5 Rank and Inverses 127

5.1 Introduction 127
5.2 Properties of rank 127
5.3 Inverses of $m \times n$ matrices 132
5.4 Rank and the largest nonsingular submatrix 137
5.5 The rank of the product of matrices 138
5.6 The generalized inverse of a matrix 142
5.7 Inversion of matrices of a special form, and "tearing" 147
Miscellaneous exercises 151

6 Linear Programming 155

6.1 Introduction 155
6.2 The simplex method 158
6.3 The theory of the simplex method 162
6.4 The simplex method (continued) 168
6.5 Graphical representations 171
6.6 Convex sets 181
6.7 Duality 188
Miscellaneous exercises 194

7 Determinants and Square Matrices 198

7.1 Introduction 198
7.2 The definition of a determinant 199
7.3 Basic properties of determinants 203
7.4 Determinants and elementary row operations 206
7.5 The solution of linear equations by determinants 208
7.6 Gaussian elimination 211
7.7 Triangular decomposition 216
Miscellaneous exercises 223

8 The Numerical Solution of Simultaneous Linear Equations 229

8.1 Introduction 229
8.2 Ill-conditioning 231
8.3 Scaling and the recognition of ill-conditioning 239
8.4 Nearly-singular matrices and numerical rank 241
8.5 Rounding and the choice of pivots 246
8.6 Choice of pivots (continued) 250
8.7 Residuals 255
8.8 The avoidance of ill-conditioning; a least-squares example 260
8.9 A summary of the practical procedure 265
Miscellaneous exercises 269

9 Eigenvalues and Eigenvectors 274

9.1 Introduction: a physical example 274
9.2 Definitions and basic properties 278
9.3 Inner products and hermitian matrices 283
9.4 Orthogonality 289
9.5 Orthogonal expansions, with an application to forced vibration 294
9.6 Iterative methods for calculating eigenvalues 299
9.7 The iterative solution of simultaneous linear equations 301
Miscellaneous exercises 307

10 Unitary Transformations 312

10.1 Unitary matrices 312
10.2 Gram-Schmidt orthogonalization 314
10.3 Reduction of a general square matrix to triangular form 318
10.4 Reduction of Hermitian matrices to diagonal form 321
10.5 The methods of Jacobi and Givens 323
10.6 A special orthogonal transformation, and Householder's method 328
10.7 Biorthogonality 333
10.8 Singular values and singular vectors 335
Miscellaneous exercises 340

11 Similarity Transformations 344

11.1 Introduction 344
11.2 Reduction to diagonal form 346
11.3 Defective matrices 349
11.4 Reduction to triangular form 352
11.5 Nilpotent matrices 355
11.6 The Jordan canonical form 361
11.7 Systems of differential equations with constant coefficients 366
11.8 Minimum polynomials and the Cayley-Hamilton theorem 370
Miscellaneous exercises 373

12 Quadratic Forms and Variational Principles 378

12.1 A geometrical example involving a quadratic form 378
12.2 Quadratic forms 385
12.3 Definite quadratic forms 392
12.4 Simultaneous diagonalization of two quadratic forms 396
12.5 Descent methods for solving simultaneous linear equations 399
12.6 A geometrical introduction to Rayleigh's principle 404
12.7 Rayleigh's principle 407
12.8 The Temple-Kato brackets for eigenvalues 411
12.9 The minimax characterization of eigenvalues 412
Miscellaneous exercises 416

13 Norms and Error Estimates 425

13.1 Vector norms 425
13.2 Matrix norms 427
13.3 Computable error bounds for linear systems 431
13.4 Norms and the condition of linear equations 433
13.5 Scaling to minimize $\|\mathbf{PAQ}\|$ $\|\mathbf{Q}^{-1}\mathbf{A}^{-1}\mathbf{P}^{-1}\|$ 438
13.6 Computable error bounds for eigenvalues 444
13.7 Error bounds for eigenvalues and eigenvectors (continued) 447
13.8 The condition of eigenvalues and eigenvectors 450
Miscellaneous exercises 454

14 Abstract Vector Spaces and Linear Transformations 459

14.1 Abstract vector spaces 459
14.2 Abstract spaces and isomorphism 463
14.3 Linear transformations 466
14.4 The algebra of linear transformations 472
14.5 Coordinates, change of basis, and linear transformations 473
14.6 Linear equations 477
14.7 Inner product spaces 483
14.8 Orthogonality 486
Miscellaneous exercises 490

Hints and Answers to Selected Exercises 494
