

Fundamentals of Rock Mechanics

J. C. Jaeger

*Professor of Geophysics in the
Australian National University*

N. G. W. Cook

*Director of the Mining Research Laboratory
Chamber of Mines of South Africa
and
Adjunct Professor in the School of Mineral
and Metallurgical Engineering, University
of Minnesota*

METHUEN & CO LTD

11 NEW FETTER LANE, LONDON EC4

Contents

FOREWORD	v
PREFACE	xi
NOTATION	xiii
✓ 1. ROCK AS A MATERIAL	page 1
1.1 Introduction. 1.2 Joints and faults. 1.3 Rock-forming minerals. 1.4 The fabric of rocks. 1.5 The mechanical nature of rock.	
2. ANALYSIS OF STRESS AND INFINITESIMAL STRAIN	9
2.1 Introduction. 2.2 Definition of stress. 2.3 Stress in two dimensions. 2.4 Stress in three dimensions. 2.5 Stress calculations in three dimensions. 2.6 Mohr's representation of stress in three dimensions. 2.7 The use of the stereographic projection. 2.8 Stress deviation. 2.9 Displacement and strain. 2.10 Infinitesimal strain in two dimensions. 2.11 Infinitesimal strain in three dimensions. 2.12 Strain deviation. 2.13 Determination of principal stresses or strains from measurements. 2.14 Matrices and change of axes. 2.15 Stress and strain in polar and cylindrical coordinates.	
× 3. FRICTION	53
3.1 Introduction. 3.2 Amonton's law. 3.3 Friction of rocks. 3.4 Phenomena with smooth surfaces. 3.5 Stick-slip oscillations. 3.6 Sliding on a plane of weakness: Two-dimensional theory. 3.7 The study of friction in triaxial apparatus. 3.8 Sliding on a plane of weakness: Three-dimensional theory.	
× 4. ELASTICITY AND STRENGTH OF ROCK	74
4.1 Introduction. 4.2 The stress-strain curve. 4.3 The effects of confining pressure and temperature. 4.4 Failure under polyaxial stresses. 4.5 Types of fracture. 4.6 The Coulomb criterion. 4.7 Mohr's hypothesis. 4.8 The plane Griffith criterion. 4.9 Murrell's extension of the Griffith criterion. 4.10 The effect of anisotropy on strength.	
5. LINEAR ELASTICITY	102
✓ 5.1 Introduction. 5.2 The stress-strain relations for an isotropic, linearly elastic solid. 5.3 Special cases. 5.4 Stress-strain relations in terms of stress and strain deviations. 5.5 The equations of equilibrium. 5.6 The equations of equilibrium in cylindrical coordinates. 5.7 Compatibility conditions for stress and the Airy stress function. 5.8 Strain energy. 5.9 Torsion of circular cylinders. 5.10 Bending and buckling. 5.11 Hollow cylinders with internal or external pressure. 5.12 Stress-strain relations for anisotropic materials.
