

*Introduction to* \_\_\_\_\_  
**PCM Telemetry  
Systems**

*Stephen Horan*

# TABLE OF CONTENTS

## Chapter 1

<b>Introduction to Telemetry Systems</b> .....	1
System Definition .....	1
Organization of the Text .....	7

## Section 1. System Interfaces

## Chapter 2

<b>Transducer Technology</b> .....	13
Introduction .....	13
Objectives .....	13
Transducer Measurement Environment .....	13
Transducer Classes .....	15
Optical and Visual Transducers .....	16
Pressure, Strain, and Force Transducers .....	20
Temperature and Humidity Transducers .....	23
Position Measures .....	29
References .....	33
Problems .....	34

## Chapter 3

<b>Modeling and Calibration</b> .....	37
Introduction .....	37
Objectives .....	37
Calibration Basics .....	37
Basic Statistical Measures .....	40
Method of Least Squares .....	46
Least-Squares Fitting Procedure .....	46
Cautions with Least Squares .....	50
Terminating the Least Squares Fit .....	52
References .....	54
Appendix: Error Function and Related Functions .....	55
Problems .....	57

## Chapter 4

<b>Computer Systems</b> .....	61
Introduction .....	61
Objectives .....	61
Operator Interface Systems .....	62
Operator Displays .....	63

Operator Commanding .....	67
Real-Time Computer Systems .....	71
Real-Time Characteristics of Hardware and Software .....	72
Ground Station Software Structure .....	74
Artificial Intelligence Applications .....	76
Payload Software Systems .....	76
Component Connections .....	78
References .....	81
Problems .....	82

## Chapter 5

<b>Signal Processing</b> .....	83
Introduction .....	83
Objectives .....	83
Signal Types .....	84
Bandlimiting the Signal .....	86
The Sampling Theorem .....	88
Review of Filter Design .....	93
Low-Pass Filter Design .....	97
High-Pass Filter Design .....	101
Band-Pass Filter Design .....	101
Low-Pass Filter Design Example .....	103
Band-Pass Filter Design Example .....	103
Single-Chip Filter Design .....	104
Arbitrary Signal Filtering .....	104
Quantizing .....	106
Uniform Quantizing .....	106
Nonuniform Quantizing .....	108
Quantization Word Size .....	110
Hardware for Signal Sampling .....	111
Sample and Hold Circuits .....	111
Analog-to-Digital Converters .....	113
Delta Modulation Techniques .....	117
References .....	122
Problems .....	124

## Section 2. Data Transport, Timing, and Synchronization

### Chapter 6

<b>Telemetry Frame and Packet Construction</b> .....	129
Introduction .....	129
Objectives .....	129
Terminology .....	130

Synchronization Codes .....	137
Telemetry Frame Design .....	138
General Concerns .....	138
Data Packaging .....	139
Packet Telemetry .....	140
The MIL-STD-1553 Packet Structure .....	145
The CCSDS Packet Standard .....	148
Other Communication Standards .....	149
Command Processor Interface .....	150
Formatting for Transmission .....	151
Data Randomizer .....	151
Data Format Specification .....	152
Data Format Generation .....	154
Usage Characteristics .....	155
References .....	160
Problems .....	161

## Chapter 7

<b>Telemetry Data Synchronization</b> .....	163
Introduction .....	163
Objectives .....	163
Bit Synchronization .....	164
Clock Extraction Circuits .....	166
Data Formats .....	168
Frame Synchronization .....	169
Frame Synchronizer State Functions .....	169
Packet Synchronization .....	171
Statistical Measures .....	172
Error Detection .....	174
Probability of Data Error .....	175
Post-Processing .....	176
Block Codes .....	177
Channel Improvement .....	179
Data Sequencing .....	179
References .....	180
Problems .....	182

## Chapter 8

<b>Time and Position Determination</b> .....	185
Introduction .....	185
Objectives .....	185
The Definition of Time .....	186
Absolute Time Determination .....	186

Elapsed Time Determination .....	188
Time Code Formats .....	190
IRIG Formats .....	190
NIST Formats .....	194
NASA/CCSDS Formats .....	199
Time and Position Determination via the GPS .....	199
GPS System Description .....	201
GPS Time and Position Determination .....	203
References .....	205
Appendix: A PN Code Generator .....	206
Problems .....	208

## Chapter 9

<b>Command Systems</b> .....	209
Introduction .....	209
Objectives .....	209
Command Composition .....	209
Command Strategies .....	211
Repeat-and-Execute Commanding .....	212
Command-Verify-and-Execute Command Protocol .....	213
Open-Loop Commanding .....	213
Commanding Examples .....	214
Operational Considerations .....	215
Command Synchronization .....	215
Command Verification .....	216
Subsystem Command Rates .....	221
Pre-Event Commanding .....	222
Command Counters .....	222
Packet Command Systems .....	223
References .....	224
Problems .....	225

## Section 3. Hardware Systems

### Chapter 10

<b>Modulation</b> .....	229
Introduction .....	229
Objectives .....	230
Review of Angle Modulation .....	230
Frequency Modulation .....	232
Phase Modulation .....	236
Signal-to-Noise Ratio .....	237
Review of Digital Modulation .....	239

Phase Shift Keying .....	239
Frequency Shift Keying .....	241
BER Performance .....	241
Utilization Issues .....	243
Bandwidth Considerations .....	243
Spectrum Control .....	247
Frequency Allocations .....	247
Emission Standards .....	251
Hardware Design .....	255
References .....	256
Appendix A: IRIG FM Channels .....	257
Appendix B: Bessel Functions .....	259
Problems .....	261

## Chapter 11

<b>Microwave Transmission</b> .....	263
Introduction .....	263
Objectives .....	263
Microwave Bands .....	264
Antenna Basics .....	264
Antenna Types .....	265
Antenna Gain and Beam Pattern .....	268
Tracking Basics .....	270
Link Characterization .....	271
Link Power Budget .....	272
System Noise Temperature .....	275
Rain Attenuation .....	282
Sky Temperature and Antenna Temperature .....	285
Radiowave Propagation Effects .....	287
Line-of-Sight Propagation .....	287
Fresnel Diffraction Zones .....	291
Atmospheric Fading and Multipath Effects .....	292
Nonatmospheric Multipath Effects .....	293
References .....	294
Problems .....	295
<b>Index</b> .....	297
