Instrumentation & Measurement

POCKET BOOK

W BOLTON

THIRD EDITION

Contents

<i>Preface</i>	ix
Part One Systems	
1 Measurement systems	3
The general measurement system	3
System transfer function	3
Intelligent instruments	4
Calibration	4
2 Performance terminology	7
3 Errors	12
Sources of error	12
Spread of results	12
Probable error	13
Limiting error	14
Summation of errors	14
System accuracy	15
4 Dynamic characteristics	17
Static and dynamic characteristics	17
Zero order instruments	17
First order instruments	17
Heat transfer effects	18
Second order instruments	19
Damped spring system	19
D operator	20
D operator and first order system	21
D operator and second order system	22
Laplace transform	22
Laplace transform for a first order system	24
Laplace transform for a second order system	25
Transfer function for a system	26
5 Loading effects	27
Loading	27
Electrical loading	27
Loading of a voltmeter	28
Loading of a potentiometer	28
Loading of a Wheatstone bridge	29
Loading of elements in a measurement system	31
6 Noise	32
Noise	32
Types of interference	32
Reduction of interference	32
Cross talk	33
Random noise	33
Noise rejection	34
Signal to noise ratio	34
Noise factor	34
Averaging	35

7	Reliability	36
	Reliability and unreliability	36
	Failure	36
	Availability	37
	Failure rate and time	37
	The exponential law of reliability	37
	Reliability of a system	39
	Redundancy	39
 <i>Part Two System components</i>		
8	Transducers	43
	Resistive transducers	43
	Capacitive transducers	48
	Inductive transducers	50
	Thermoelectric transducers	56
	Piezo-electric transducers	61
	Photovoltaic transducers	62
	Electrochemical transducers	64
	Elastic transducers	65
	Pneumatic transducers	68
	Differential pressure transducers	69
	Mechanical transducers	69
	Vibrating transducers	72
9	Signal converters	73
	Wheatstone bridge	73
	A.C Bridges	79
	Potentiometer bridges	84
	Amplifiers	87
	Signal linearization	92
	Current and voltage scaling	93
	Attenuation	96
	Filtering	97
	Modulation	99
	Analogue-digital conversion	101
10	Display systems	107
	Meters	107
	Direct reading recorders	107
	Galvanometric recorders	110
	Closed-loop recorders	115
	Cathode ray tubes	116
	Alphanumeric displays	122
	Magnetic tape recorders	122
 <i>Part Three Measurements</i>		
11	Chemical Composition	131
	Chromatography	131
	Electrochemical analysis	136
	Spectroscopy	139
	Mass spectrometry	144
	Thermal techniques	145
12	Density	147
	Weight methods	147

Buoyancy methods	148
Pressure methods	149
Vibrating element methods	150
Radiation methods	151
13 Displacement	153
Mechanical measurements of linear displacement	154
Pneumatic measurements of linear displacement	154
Electrical measurements of linear displacement	157
Optical measurements of linear displacement	159
Electrical angular displacement measurements	161
Shaft encoders	162
Optical angular displacement measurements	163
14 Electrical quantities	165
Moving coil meter	168
Electronic instrument	172
Moving iron meter	174
Thermocouple meter	176
Electrodynamometer	176
Electronic wattmeter	179
Watt-hour meter	180
Electrostatic meters	180
Digital voltmeters	182
D.C bridges	183
A.C bridges	185
Potentiometer bridges	186
Transformer bridges	187
Q-meter	188
Frequency measurement	191
15 Flow	193
Differential pressure flowmeters	195
Mechanical flowmeters	201
Positive displacement meters	202
Electromagnetic flowmeters	206
Ultrasonic flowmeters	208
Oscillatory	209
Direct mass flowmeters	212
Inferential mass flowmeters	214
Pressure point velocity measurements	214
Thermal point velocity measurements	216
Calibration	216
16 Force	217
Lever-balance methods	217
Force-balance methods	218
Elastic elements	219
Pressure methods	220
17 Level	222
Sight methods	223
Float methods	223
Displacer gauges	226
Pressure methods	228
Weight methods	230
Electrical methods	230
Ultrasonic methods	231

	Nuclear radiation methods	232
	Thermal methods	233
18	Pressure	234
	Liquid columns	234
	Diaphragms	240
	Capsules and bellows	243
	Bourdon tubes	244
	Vibrating wire pressure gauges	245
	Piezo-electric pressure gauges	246
	Calibration	246
19	Radiation	247
	Gas detectors	247
	Scintillation counter	249
	Photographic film	250
	Thermoluminescence	251
20	Stress and strain	252
	Extensometers	252
	Strain gauges	253
	Whole surface strain measurement	256
	Photoelasticity	257
21	Temperature	258
	Expansion types	260
	Resistance thermometers	262
	Thermoelectric effect	263
	Pyrometers	264
22	Vacuum	268
	Boyle's law	268
	Thermal conductivity	269
	Ionization gauges	270
<i>Part Four Microprocessor based systems</i>		
23	Microprocessors in instrumentation	275
	Intelligent instruments	275
	Basic elements of microprocessor systems	277
	Data acquisition systems	281
	Data logger	284
24	Interfacing	285
	Standard bus	285
	General-purpose instrument bus	285
	Centronics parallel interface	289
	Serial data transmission	290
	I ² C bus	292
	Interfacing peripherals	293
	Programmable interfaces	299
	<i>Index</i>	301
