
Source Coding Theory

Robert M. Gray

Kluwer Academic Publishers

Contents

Preface	ix
1 Information Sources	1
1.1 Probability Spaces	1
1.2 Random Variables and Vectors	8
1.3 Random Processes	11
1.4 Expectation	14
1.5 Ergodic Properties	16
Exercises	21
2 Codes, Distortion, and Information	27
2.1 Basic Models of Communication Systems	27
2.2 Code Structures	30
2.3 Code Rate	36
2.4 Code Performance	38
2.5 Optimal Performance	44
2.6 Information	44
2.6.1 Information and Entropy Rates	49
2.7 Limiting Properties	49
2.8 Related Reading	50
Exercises	50
3 Distortion-Rate Theory	53
3.1 Introduction	53
3.2 Distortion-Rate Functions	54
3.3 Almost Noiseless Codes	58
3.4 The Source Coding Theorem for Block Codes	61
3.4.1 Block Codes	62
3.4.2 A Coding Theorem	63
3.5 Synchronizing Block Codes	69
3.6 Sliding-Block Codes	71

3.7	Trellis Encoding	72
	Exercises	77
4	Rate-Distortion Functions	81
4.1	Basic Properties	81
4.2	The Variational Equations	84
4.3	The Discrete Shannon Lower Bound	93
4.4	The Blahut Algorithm	96
4.5	Continuous Alphabets	97
4.6	The Continuous Shannon Lower Bound	98
4.7	Vectors and Processes	102
4.7.1	The Wyner-Ziv Lower Bound	103
4.7.2	The Autoregressive Lower Bound	105
4.7.3	The Vector Shannon Lower Bound	106
4.8	Norm Distortion	107
	Exercises	111
5	High Rate Quantization	115
5.1	Introduction	115
5.2	Asymptotic Distortion	117
5.3	The High Rate Lower Bound	120
5.4	High Rate Entropy	125
5.5	Lattice Vector Quantizers	126
5.6	Optimal Performance	127
5.7	Comparison of the Bounds	129
5.8	Optimized VQ vs. Uniform Quantization	131
5.9	Quantization Noise	134
	Exercises	136
6	Uniform Quantization Noise	137
6.1	Introduction	137
6.2	Uniform Quantization	139
6.3	PCM Quantization Noise: Deterministic Inputs	144
6.4	Random Inputs and Dithering	150
6.5	Sigma-Delta Modulation	154
6.6	Two-Stage Sigma-Delta Modulation	159
6.7	Delta Modulation	163
	Exercises	174
	Bibliography	177
	Index	184
