

Texture and Anisotropy

Preferred Orientations in Polycrystals and their Effect on Materials Properties

U. F. Kocks, C. N. Tomé and H.-R. Wenk

CONTENTS

Contributors	viii
Foreword	xi
Introduction by <i>H. Mecking</i> : MOTIVATION	1
 PART ONE: DESCRIPTION OF TEXTURES AND ANISOTROPIES	
Chapter 1. Anisotropy and Symmetry	10
<i>U. F. Kocks</i>	
1. Structure and Properties	12
2. Crystal Symmetries	19
3. Sample Symmetry and Test Symmetry	28
4. Anisotropy and Symmetry of Properties	32
Chapter 2. The Representation of Orientations and Textures	44
<i>U. F. Kocks</i>	
1. The Representation of Directions and Planes	46
2. The Representation of Orientations	57
3. The Representation of Textures	77
4. Continuous Distributions and Series Representation	94
Chapter 3. Determination of the Orientation Distribution from Pole Figure Data	102
<i>J. S. Kallend</i>	
1. Relation between Pole Figures and the OD	104
2. Harmonic Method	107
3. Ghosts	112
4. Discrete or Direct Methods	114
5. Operational Issues	119
6. Recommendations	121
Chapter 4. Pole Figure Measurements with Diffraction Techniques	126
<i>H.-R. Wenk</i>	
1. X-ray Diffraction	129
2. Special Procedures	149
3. Neutron Diffraction	159
4. Electron Diffraction	167
5. Comparison of Methods	176
Chapter 5. Typical Textures in Metals	178
<i>A. D. Rollett & S. I. Wright</i>	
1. Deformation Textures in Face-Centered Cubic (fcc) Metals	181
2. Deformation Textures in Body-Centered Cubic (bcc) Metals	191
3. Deformation Textures in Hexagonal Close-Packed (hcp) Metals	203
4. Deformation Textures in 'Other' Materials	209
5. Composites	215
6. Transformation Textures	218
7. Texture Inhomogeneities	226
8. Solidification and Thin-Film Textures	232
9. Summary	238

Chapter 6. Typical Textures in Geological Materials and Ceramics	240
<i>H.-R. Wenk</i>	
1. Geological Materials	242
2. Bulk Ceramics	262
3. Thin Films and Coatings	271
 PART TWO: ANISOTROPIC MECHANICAL PROPERTIES IN TEXTURED POLYCRYSTALS 	
Chapter 7. Tensor Properties of Textured Polycrystals	282
<i>C. N. Tomé</i>	
1. Grain Averages	284
2. Crystal Elastic Properties	285
3. Elastic and Thermal Properties of Polycrystals	290
4. Visco-elastic Properties of Polycrystals	308
Chapter 8. Kinematics and Kinetics of Plasticity	326
<i>U. F. Kocks</i>	
1. Slip and Twinning in Single Crystals	328
2. Grain Interaction and Polycrystal Plasticity	365
3. Kinematics in Polycrystalline Bodies	380
Chapter 9. Simulation of Deformation Textures for Cubic Metals	390
<i>U. F. Kocks</i>	
1. Simulation Procedures	392
2. Effect of Relaxing Constraints due to Grain Shape. Strain Dependence	396
3. Effects of Changes in the Single-crystal Flow Potential	404
4. General Discussion and Assessment	407
Chapter 10. Effects of Texture on Plasticity	420
<i>M. G. Stout & U. F. Kocks</i>	
1. Experimental Techniques and Phenomenology	422
2. Yield-surface Shapes: Predictions and Experimental Results	439
3. Stress/Strain Curves: Experimental Results and Analysis	458
4. Summary and Assessment	463
Chapter 11. Self-Consistent Modeling of Heterogeneous Plasticity	466
<i>C. N. Tomé & G. R. Canova†</i>	
1. Background	467
2. Constitutive Relations for Grain and Polycrystal	470
3. The Visco-plastic Inclusion Formalism	472
4. Self-consistent Polycrystal Formulation	474
5. Applications and Discussion	480
6. Self-consistent Modeling of Two-phase Polycrystals	498
7. Conclusions	509
Chapter 12. Finite-Element Modeling of Heterogeneous Plasticity	512
<i>P. R. Dawson & A. J. Beaudoin</i>	
1. Heterogeneous Systems	513
2. Response of Polycrystal Aggregates	519
3. Concluding Remarks	531

PART THREE: SOME APPLICATIONS

Chapter 13. Finite-Element Simulation of Metal Forming	532
<i>P. R. Dawson & A. J. Beaudoin</i>	
1. Introduction	533
2. Rolling Simulations	537
3. Sheet Forming Simulations	548
4. Numerical Methodologies	553
5. Concluding Remarks	558
Chapter 14. Plasticity Modeling in Minerals and Rocks	560
<i>H.-R. Wenk</i>	
1. Verification of Plasticity Models with Anisotropic Minerals	562
2. Textures as a Diagnostic Tool in Naturally Deformed Rocks	576
3. Physical Properties: Seismic Anisotropy in the Earth's Mantle	587
4. Conclusions	595
Appendix. The Elastic Inclusion Problem (<i>C. N. Tomé</i>)	597
Notation and Index of Symbols	604
Reference Index	616
Subject Index	668
