Graw
Hill

CONTENTS

<i>List of Tables</i>	xi
<i>Preface</i>	xvii
Section 1. Fluid Properties and Hydraulic Units . . .	1-1
Fluid properties	1-1
Hydraulic units	1-5
Tables	1-7
Section 2. Hydrostatics	2-1
Fluid pressure	2-1
Atmospheric pressure	2-2
Manometers	2-4
Pressure forces on plane surfaces	2-8
Pressure forces on curved surfaces	2-12
Pressures on spillway sections of dams	2-15
Uplift pressure on dams	2-17
Stability of dams	2-18
Section 3. Fundamental Concepts of Fluid Flow . . .	3-1
Classification of flow	3-1
Continuity	3-4
Energy and the Bernoulli equation	3-5
Siphons	3-9
Venturi meters	3-9
Momentum concepts	3-11
Dimensional analysis and similitude	3-15
Section 4. Orifices, Gates, and Tubes	4-1
Fundamental equations	4-2
Path of jet	4-4
Orifices under low heads	4-4
Discharge under falling head	4-5

Orifice coefficients	4-6
Submerged orifices	4-9
Gates	4-10
Pipe orifices	4-14
Tubes	4-19
Nozzles	4-21
Submerged tubes	4-22
Culverts	4-23
Tables for orifices, gates and tubes	4-27
Section 5. Weirs	5-1
Fundamental principles	5-1
Sharp-crested weirs	5-4
Horizontal sharp-crested weirs	5-5
Experiments on sharp-crested rectangular weirs	5-6
Horizontal sharp-crested weirs with end contractions	5-13
V-notch weirs	5-14
Submerged sharp-crested weirs	5-17
Weirs not sharp-crested	5-21
Broad-crested weirs	5-23
Weirs of triangular section	5-24
Weirs of trapezoidal section	5-25
Weirs of irregular section	5-26
Spillway sections	5-28
The selection and use of weirs	5-29
Weirs for measuring stream flow	5-31
Tables	5-32
Section 6. Pipes	6-1
Fundamental principles	6-2
Loss of energy due to friction	6-6
Laminar flow in pipes	6-6
Turbulent flow in pipes	6-9
Selection of energy-loss equation and friction factor	6-17
Minor losses	6-20
Loss at entrance	6-20
Loss of head due to enlargement	6-21
Loss of head due to contraction	6-22
Loss of head due to gate valves	6-23
Loss of head due to bends	6-23

Compound pipes	6-27
Distribution Networks	6-29
Tables	6-38
Section 7. Steady Uniform Flow in Open Channels	7-1
Elements of a cross section	7-1
Sectional forms	7-2
Most efficient channel section	7-6
Energy losses in open channels	7-7
Laminar flow with a free surface	7-9
Turbulent flow in open channels	7-13
The Manning Equation	7-14
Solution of problems by the Manning equation	7-20
Roughness coefficients	7-21
Noneroding velocities	7-23
Air entrainment	7-27
Tables	7-30
Section 8. Open Channels with Nonuniform Flow	8-1
Rapidly varied flow	8-2
Constant-discharge relations	8-3
Constant-energy relations	8-4
Analytical solutions of constriction problems	8-5
Tables for solving constriction problems	8-6
Critical depth—general case	8-7
Critical depth in rectangular channels	8-8
Critical depth in triangular channels	8-9
Critical depth in parabolic channels	8-10
Critical depth in trapezoidal sections	8-10
Critical depth in circular channels	8-13
Critical-depth meters	8-14
Critical slope	8-15
Channel entrance	8-17
The fall	8-18
The hydraulic jump	8-20
The hydraulic jump for small slopes	8-21
Force equation	8-21
Hydraulic-jump computations	8-23
Hydraulic jump in trapezoidal channels	8-23
Hydraulic jump in rectangular channels	8-24
Hydraulic jump in sloping channels	8-25
Length of jump	8-26
Position of jump	8-27

Minor losses	8-29
Transition through critical depth without jump . . .	8-35
Gradually varied flow	8-36
Equations of gradually varied flow and generalized profiles.	8-36
Methods of computing water-surface profiles	8-39
Short channels	8-45
Chutes.	8-46
Flow over very steep inclines	8-48
Tables	8-49
Section 9. High-velocity Transitions	9-1
Straight-walled constrictions	9-1
Enlargements and curved-wall constrictions	9-6
The method of characteristics.	9-12
High-velocity flow at channel bends	9-16
Section 10. Wave Motion and Forces	10-1
Oscillatory waves	10-2
Surface form	10-3
Wave celerity.	10-4
Wavelength	10-6
Orbital motion	10-8
Energy	10-10
Group velocity and energy transmission	10-11
Refraction	10-13
Variation of wave height with depth	10-16
Breaking waves	10-18
Energy dissipation	10-21
Reflection, resonance, and damping.	10-27
Diffraction and harbor models	10-30
Characteristics of wind-generated waves	10-31
Wave run-up and overtopping	10-37
Wave forces	10-40
Wind tides	10-54
Shore-erosion control	10-57
Translatory waves.	10-59
Positive waves	10-61
Negative waves	10-68
Solitary waves	10-69
Bibliography	10-70

Section 11. Spatially Variable and Unsteady Flow . . .	11-1
Unsteady open-channel flow	11-1
Steady spatially variable flow	11-5
Unsteady flow with a free surface	11-10
Water hammer	11-13
Pressure when $T \cong 2L/v_w$	11-16
Pressure when $T \cong 2L/v_w$	11-16
Section 12. Measurement of Flowing Water	12-1
The current meter	12-2
Pitot tubes	12-3
The color method	12-6
The salt-velocity method	12-6
The Gibson method	12-7
Venturi meters	12-10
Pipe orifices	12-15
Standardized nozzles	12-18
California-pipe method	12-19
Venturi flumes	12-20
Critical-depth meters	12-22
Contracted opening	12-23
Chemical Gaging	12-24
Electromagnetic flowmeters	12-31
Section 13. Applications of Numerical Methods and Digital Computers to Hydraulic Engineering	13-1
Computers, Input-Output and Coding Languages	13-1
Fortran	13-3
Computational Concepts	13-6
Direct Method	13-7
Iteration Method	13-8
Solution by Successive Approximations—Logical Decisions	13-9
Steady Nonuniform Flow in Prismatic Open Channels by Numerical Integration	13-15
Flow in Pipes	13-20
Experimental Measurements, Least Squares Analysis	13-23
Distribution Networks	13-28
Appendix, Numerical Methods	13-33
Solution of Algebraic Equations by Bisection Method	13-33

Solution of Algebraic Equations by Newton's	
Method	13-35
Numerical Integration	13-36
Interpolation Methods	13-37
Section 14. Tables	14-1
Use of Logarithms.	14-1
Tables	14-4
Index follows Section 14
