

DYNAMICS OF PAVEMENT STRUCTURES

G. MARTINČEK

E & FN SPON

An Imprint of Chapman & Hall

CONTENTS

Preface	XI
List of symbols	XIII
Introduction	XIX
1 Dynamic diagnosis of pavement structures	1
1. 1 Stress-wave velocity measurement method	3
1. 1. 1 Principle of method and experimental technique	3
1. 1. 2 Theoretical assumptions	7
1. 2 Mechanical impedance methods	17
1. 2. 1 Complex modulus of elasticity	17
1. 2. 2 Function of mechanical impedance	19
1. 2. 3 Measurement method	24
1. 2. 4 Experimental apparatus	30
1. 2. 5 Application to non-destructive testing of the subgrade . . .	32
1. 2. 6 Dynamic viscoelastic properties of bituminous materials . .	35
1. 2. 7 Dynamic viscoelastic properties of soil materials	44
1. 3 Dynamic diagnosis of subgrade	50
1. 3. 1 Application of the phase velocity method	51
1. 3. 2 Application of the mechanical impedance method	53
1. 4 Diagnosis of dynamic elasticity and rigidity of layered pavement structures	60
1. 4. 1 Determination of the characteristics of rigidity and elasticity using detailed measurement	62
1. 4. 2 Simplified procedures for the assessment of the elasticity and rigidity characteristics of pavement structures	77
1. 4. 3 Evaluation of the rigidity of layered pavements using deflection determined by means of stress-wave velocities . .	79
1. 4. 4 Diagnosis of dynamic elasticity and rigidity of highway pavement sections	86
1. 4. 5 Testing pavements under construction	92
1. 4. 6 Influence of base and sub-base layers on the overall rigidity of pavement structures	96
2 Model of the equivalent plate on subgrade	99
2. 1 Calculation of cross-section quantities of equivalent plate and calculation of stress in layered pavement structures	99

2. 1. 1	Calculation of stress in layered structures with defective layer contact	101
2. 1. 2	Coherence of layered pavement stiffness with the characteristics of the equivalent plate	102
2. 1. 3	Variations of normal and tangential stress for highway cement concrete pavements with perfect layer contact . . .	103
3	Variants of the dynamic theory of the equivalent plate on subgrade . .	107
3. 1	Layer in contact with the half-space	109
3. 1. 1	Torsional vibration of layer on viscoelastic half-space	109
3. 1. 2	Torsional vibration of mass on layered half-space	114
3. 1. 3	Vertical vibration of layer on viscoelastic half-space	117
3. 2	Stress waves in layer on half-space without shear contact	126
3. 2. 1	Boundary and contact conditions at the interface	126
3. 2. 2	Frequency equation	127
3. 2. 3	Curves of dispersion for stress-wave phase velocities	131
3. 2. 4	Numerical results	134
3. 3	Plate on half-space without shear contact.	138
3. 3. 1	Conditions at the interface of plate and half space	140
3. 3. 2	Normal dynamic load on circular contact area.	144
3. 3. 3	Deflection of plate	144
3. 3. 4	Bending moments of equivalent plate	146
3. 3. 5	Transverse forces on equivalent plate.	147
3. 3. 6	Reaction of subgrade	147
3. 3. 7	Numerical calculation of components of state vector for highway pavements under construction or completed	148
3. 3. 8	Comparison of deflections and stresses in layered pavements according to theory of equivalent plate on subgrade and theory of layered half-space	161
3. 4	Technical theory of plate on subgrade	164
3. 4. 1	Dynamic simplified model of soil base.	164
3. 4. 2	Dispersion curve for stress-wave phase velocities and coefficient of equivalent inertia	167
3. 4. 3	Axial symmetric dynamic load of unbounded plate on subgrade	169
3. 4. 4	Solution in integral form.	171
3. 4. 5	Solution in closed form.	174
3. 4. 6	Compensation of subgrade inertia by coefficient of mass increase of plate	176
3. 4. 7	Components of the state vector under a dynamic load uniformly distributed on a circular area	179
3. 4. 8	Physical model of thin plate on subgrade with rigidity defined by the dispersion curve for flexural stress waves. .	186
3. 4. 9	Numerical results	189

4 Dynamic interaction of plates with the subgrade for characteristic loads	196
4.1 The applied variant of the theory of an equivalent plate on subgrade	196
4.2 Reduction of partial differential equation to an ordinary differential equation	198
4.2.1 Application of the method of initial parameters	200
4.3 Dynamic load at the boundary region of a plate on subgrade	202
4.3.1 Half-plate on subgrade	202
4.3.2 Survey of relationships for state vector components of a half-plate on subgrade	208
4.3.3 Numerical results	211
4.4 Plate strip on subgrade	221
4.4.1 Survey of relationships for state vector components of plate strip on subgrade	226
4.4.2 Numerical results	228
4.5 Dynamic stress state near cut transverse joints of plate on subgrade	229
4.5.1 Influence functions of half-space on subgrade with initial parameters of transverse force FQ_0 and bending moment FM_0	230
4.5.2 Determination of unknown initial parameters for transverse force FQ_0	232
4.5.3 Numerical results	233
4.6 Influence of inhomogenous subgrade on dynamic interaction of plate with subgrade	234
4.6.1 Results of the dynamic diagnosis of highway pavement at the site of failure cracks in concrete surfacing	235
4.6.2 Influence of sudden change of rigidity in equivalent plate on subgrade	238
4.6.3 Numerical results	240
4.6.4 Sudden change of rigidity situated parallel to free boundary of half-plate on subgrade	247
4.7 Comparison of extreme values of flexural moments and subgrade reactions	255
4.8 Pulse (impact) loads of equivalent plate on subgrade	257
4.8.1 Dynamic response of plate on subgrade as an analogue of flexible pavement structure	259
5 Dynamic interaction of plate with subgrade under a moving load	262
5.1 Physical model of plate on subgrade as dynamic equivalent of the pavement	262
5.2 Load moving along boundary of half-plate on subgrade	263
5.3 Numerical results	267

5. 4	Influence of unevennesses on dynamic response	274
5. 4. 1	Influence of periodical surfacing unevennesses under moving load	274
5. 4. 2	Influence of periodical surfacing unevennesses by moving load system with two degrees of freedom	274
5. 4. 3	Influence of isolated surfacing unevennesses by moving load system with two degrees of freedom	278
5. 4. 4	Numerical results	281
5. 5	Effect of moving random load	285
5. 5. 1	Numerical results	289
6	The dynamic response of plates with free boundaries on unbounded soil base	293
6. 1	Fundamental solutions for plate and subgrade	293
6. 2	Boundary integral formulation according to theorem of reciprocity	296
6. 2. 1	Boundary conditions	298
6. 2. 2	Integral formulations for an internal point of plate and subgrade	299
6. 2. 3	Boundary integral equations	299
6. 3	Relations for the calculation of internal forces and moments in plate on subgrade under virtual unit force and moment loads	301
6. 4	Solution of boundary integral equations using boundary elements	303
6. 5	Numerical results	307
6. 5. 1	Square plate on subgrade	308
6. 5. 2	Rectangular plate on subgrade	314
6. 5. 3	Evaluation of application of boundary element method	317
6. 5. 4	Effect of pulse loads	318
7	Concentration of vibration about holes in plate on subgrade	320
7. 1	Integral formulations according to theorem of reciprocity	320
7. 1. 1	Boundary conditions	322
7. 1. 2	Boundary integral equations	322
7. 1. 3	Solution of integral equations using boundary elements	325
7. 2	Numerical results	326
7. 2. 1	Diffraction of stress waves in plate on subgrade with rectangular hole	327
7. 2. 2	Influence of length of lateral sides of rectangular hole on resonance regions and vibration concentration	330
7. 2. 3	Influence of the length of frontal sides of rectangular hole on resonance regions	334
7. 3	Influence of rectangular hole in plate on subgrade by pulse propagation	336
7. 3. 1	Numerical results	336

8 Non-linear dynamic response of unbounded plate on subgrade	340
8. 1 Dynamic deflection of unbounded plate on non-linear soil base under a stationary load	340
8. 2 Non-stationary vibration problems of an unbounded plate on subgrade	343
8. 3 Non-linear non-stationary vibration of a plate on subgrade	345
8. 4 Numerical applications	348
8. 4. 1 Effect of a trapezoid-shaped pulse	349
8. 4. 2 Bending moment in plate on subgrade and subgrade reaction due to an instantaneous pulse load.	355
9 Effects of vibration-isolating barriers on propagation of vibration in soil bases	361
9. 1 Application of boundary element method	361
9. 1. 1 Simplified dynamic model of subgrade and fundamental solution	362
9. 1. 2 Boundary integral formulation according to Rayleigh's theorem of reciprocity	363
9. 2 Barriers of different materials.	364
9. 2. 1 Effect of a linear barrier.	367
9. 2. 2 Influence of various barrier rigidities on vibration isolation	368
9. 2. 3 Influence of various barrier thicknesses on vibration isolation	370
9. 2. 4 Dynamic deflection field around barrier	371
9. 3 Trench barriers	374
9. 3. 1 Linear trench barriers.	375
9. 4 Sheet piling barriers	377
9. 4. 1 Linear sheet piling barriers.	379
9. 4. 2 Closed circular sheet piling barriers	380
9. 5 Screening effect for pulse loads	381
