# Model Reduction for Control System Design

Springer

# Contents

|   |             |
|---|-------------|
| <b>Preface</b>  | <b>vii</b>  |
| <b>Acknowledgements</b>   | <b>ix</b>   |
| <b>Contents</b>   | <b>xi</b>   |
| <b>List of Figures</b>  | <b>xiii</b> |
| <b>Key Notation</b>   | <b>xv</b>   |
| <b>1 Methods for Model Reduction</b>                                  | <b>1</b>    |
| 1.1 Introduction to Model and Controller Reduction . . . . .          | 1           |
| 1.2 Model Reduction by Truncation . . . . .                           | 2           |
| 1.3 Singular Perturbation . . . . .                                   | 5           |
| 1.4 Reduced Order Models Based on Balanced Realization Truncation . . | 7           |
| 1.5 Methods Involving Minimizing an Approximation Error Norm . . . .  | 16          |
| 1.6 Hankel Norm Approximation . . . . .                               | 20          |
| 1.7 Markov and Covariance Parameter Matching . . . . .                | 40          |
| 1.8 Mixed Methods . . . . .   | 44          |
| 1.9 Model Reduction in Discrete Time Systems . . . . .                | 46          |
| 1.10 Examples . . . . .   | 54          |
| <b>2 Multiplicative Approximation</b>                                 | <b>61</b>   |
| 2.1 The Multiplicative Approximation Problem . . . . .                | 61          |
| 2.2 Balanced Stochastic Truncation . . . . .                          | 63          |
| 2.3 Balanced Stochastic Truncation: Theory and Extensions . . . . .   | 67          |
| 2.4 Multiplicative Hankel Norm Approximation . . . . .                | 81          |
| 2.5 Example . . . . .   | 90          |

|          |  |            |
|----------|--|------------|
| <b>3</b> | <b>Low Order Controller Design</b>   | <b>93</b>  |
| 3.1      | Approaches to the Design of Low Order Controllers . . . . .                | 93         |
| 3.2      | Controller and Plant Reduction via Frequency Weighted Approximation        | 96         |
| 3.3      | Frequency Weighted Balanced Truncation . . . . .                           | 102        |
| 3.4      | Frequency Weighted Hankel Norm Reduction . . . . .                         | 112        |
| 3.5      | Frequency Weighted Reduction Using Partial Fractions . . . . .             | 115        |
| 3.6      | Multiplicative Approximation with Frequency Weighting . . . . .            | 118        |
| 3.7      | Sampled-data Controller Reduction . . . . .                                | 119        |
| 3.8      | Example . . . . .  | 124        |
| <b>4</b> | <b>Model and Controller Reduction Based On Coprime Factorizations</b>      | <b>129</b> |
| 4.1      | Coprime Factorizations: What are they and why use them? . . . . .          | 129        |
| 4.2      | Coprime Fractional Descriptions . . . . .                                  | 131        |
| 4.3      | Reducing Controller Dimension Using Coprime Fractions . . . . .            | 137        |
| 4.4      | Controller Reduction by $H_\infty$ -balanced Truncation . . . . .          | 141        |
| 4.5      | Controller Reduction via Coprime Fractions and Frequency Weighting         | 145        |
| 4.6      | Controller Reduction via Multiplicative Coprime Factor Approximation       | 149        |
| 4.7      | Reducing Controller Dimension to Preserve $H_\infty$ Performance . . . . . | 151        |
| 4.8      | Example . . . . .  | 153        |
|          | <b>Bibliography</b>  | <b>159</b> |
|          | <b>Index</b>   | <b>167</b> |

# List of Figures

|        |   |    |
|--------|---|----|
| 1.6.1  | A lower linear fractional transformation . . . . .  | 27 |
| 1.6.2  | Network view of LFT . . . . .   | 27 |
| 1.9.1  | Relationship of truncation and singular perturbation of a balanced realization for continuous and discrete time cases . . . . .   | 47 |
| 1.9.2  | Illustration of the Nehari shuffle algorithm . . . . .  | 51 |
| 1.10.1 | Comparison of the gain characteristic of the original system $G$ and four different reduced order systems (modal truncation, balanced truncation, Hankel norm reduction, singular perturbation of a balanced realization) . . . . . | 55 |
| 1.10.2 | Additive error characteristic for four reduced order models together with error bounds . . . . .  | 56 |
| 1.10.3 | Comparison of the gain characteristic of the original system $G$ and four different reduced order systems (modal truncation, balanced truncation, Hankel norm reduction, singular perturbation of a balanced realization) . . . . . | 57 |
| 1.10.4 | Additive error characteristic for four reduced order models together with error bounds . . . . .  | 57 |
| 1.10.5 | Comparison of the gain characteristic of the original system and three reduced order systems (balanced truncation, modal truncation and modal truncation with $H_2$ -norm optimization) . . . . .                                   | 58 |
| 1.10.6 | Comparison of gain characteristic of additive error for three reduced order models (balanced truncation, Markov parameter and time moment matching) . . . . .   | 59 |
| 2.5.1  | Comparison of gain characteristics for two multiplicative and two additive error reductions . . . . .   | 90 |
| 2.5.2  | Comparison of phase characteristics for two multiplicative and two additive error reductions . . . . .  | 91 |

|       |   |     |
|-------|---|-----|
| 2.5.3 | Multiplicative error and $H_\infty$ error bounds for the four reduction methods . . . . .                         | 91  |
| 3.1.1 | Approaches to low order controller design for a high order plant . .  | 94  |
| 3.2.1 | Effect of replacing $K$ by $\hat{K}$ . . . . .  | 97  |
| 3.2.2 | Redrawing of Figure 3.2.1 . . . . .   | 97  |
| 3.2.3 | Redrawing of Figure 3.2.2 . . . . .   | 97  |
| 3.2.4 | Closed loop with plant depicted as a multiplicative perturbation of model . . . . .                               | 101 |
| 3.7.1 | Sampled-data closed loop . . . . .  | 120 |
| 3.7.2 | Replacing the continuous-time plant by a discrete-time plant. . . .   | 120 |
| 3.7.3 | Discrete-time closed-loop system . . . . .  | 120 |
| 3.7.4 | Fast-sampled closed-loop system . . . . .   | 121 |
| 3.7.5 | Representation of previous equation . . . . .   | 121 |
| 3.8.1 | Loop gain design constraint with results of two LQG designs . . . .   | 125 |
| 3.8.2 | Gain characteristics of original plant and two reduced order models   | 126 |
| 3.8.3 | Comparison of loop gain with original controller and four reduced order controllers . . . . .                     | 127 |
| 3.8.4 | Gain of original controller and four reduced order controllers . . . .  | 127 |
| 3.8.5 | Closed-loop gain comparison with original controller and four reduced order controllers . . . . .                 | 128 |
| 4.2.1 | Closed-loop negative feedback system . . . . .  | 131 |
| 4.3.1 | Controller-plant loop resulting from $LQG$ design . . . . .   | 138 |
| 4.3.2 | MIMO Feedback System . . . . .  | 138 |
| 4.4.1 | Closed-loop system . . . . .  | 142 |
| 4.5.1 | Closed loop in conventional form . . . . .  | 145 |
| 4.5.2 | Redrawing of closed loop . . . . .  | 146 |
| 4.5.3 | Further redrawing of closed loop . . . . .  | 146 |
| 4.8.1 | Comparison of closed loop transfer functions with original controller and two reduced order controllers . . . . . | 154 |
| 4.8.2 | Comparison of controller gain characteristics . . . . .   | 154 |
| 4.8.3 | Gain plots of transfer function from $w_1$ to $z_1$ . . . . .   | 156 |
| 4.8.4 | Gain plots of transfer function from $w_2$ to $z_1$ . . . . .   | 156 |
| 4.8.5 | Gain plots of transfer function from $w_1$ to $z_2$ . . . . .   | 157 |
| 4.8.6 | Gain plots of transfer function from $w_2$ to $z_2$ . . . . .   | 157 |
