

Aircraft Noise

MICHAEL J. T. SMITH

Contents

<i>Preface</i>	<i>page</i> x
<i>Acknowledgments</i>	xiv
1 Human reaction to aircraft noise	1
1.1 Sound intensity, frequency and the decibel	3
1.2 The perceived noise scale	7
1.3 The tone correction	10
1.4 The effective perceived noise scale	12
1.5 Noise exposure modelling	13
2 Action against aircraft noise	20
2.1 History	21
2.2 The noise certification scheme	24
2.3 Certification develops	27
2.4 Operational controls	31
2.5 Land use planning	39
2.6 Other control measures	40
3 Aircraft noise sources	41
3.1 Airframe noise	41
3.2 Sonic boom	46
3.3 The propeller	51
3.3.1 Noise sources	53
3.3.2 Control of propeller noise	56
3.4 The "jet" engine	57
3.5 Fan and compressor noise	62
3.5.1 Broadband noise	62
3.5.2 Discrete tones	64
3.5.3 Interaction tones resulting from atmospheric turbulence	73
3.6 Turbine noise	77

Contents

3.7	Jet noise	83
3.7.1	Shock-associated noise	86
3.7.2	Jet mixing noise	88
3.7.3	Flight effects	90
3.7.4	The two-stream exhaust	90
3.7.5	Other considerations	97
3.8	Noise of thrust reversers	97
3.9	Combustion noise and other engine sources	100
3.10	The helicopter	103
3.11	Installation effects	107
3.12	Cabin noise	114
3.13	Military aircraft noise	116
3.14	Other aircraft noise sources	117
3.14.1	Auxiliary power units (APUs)	117
3.14.2	Air and hydraulic power systems	117
3.14.3	FSNs	118
4	Power-plant noise control	120
4.1	Suppression of the early jets	120
4.2	Noise control in the modern turbofan	134
4.3	Acoustic absorbers	141
4.4	Other noise control suggestions	150
5	Concorde – a special case	153
5.1	Chronology of events	155
5.2	What are the lessons of the Concorde?	161
5.3	Technical issues	162
5.4	Post-Concorde	172
5.5	Summary	175
6	Noise data acquisition and presentation	176
6.1	Aircraft noise measurement	178
6.2	Static rig and engine test measurements	185
6.3	Source location	189
6.4	Test facilities	192
6.5	Packaging for public consumption	199
6.5.1	Microphone positioning	201
6.5.2	Correcting for atmospheric absorption of sound	206
6.5.3	The tone correction	218
6.5.4	The background noise problem – or, Consider the bumble-bee	221
6.5.5	Summary	225
7	Aircraft noise prediction	227
7.1	Aircraft noise	227

7.1.1	Power-plant design details and performance characteristics	229
7.1.2	Component noise prediction procedures	230
7.1.3	Aircraft noise characteristics	232
7.1.4	Propeller power-plants	234
7.1.5	The helicopter	238
7.2	Aircraft noise contours	238
7.2.1	Technical problems	240
7.2.2	Elements of contour methodology	242
7.2.3	Validation and accuracy of contours	245
8	Prospects for the future	246
8.1	Fleet size and composition	247
8.2	Technology	252
8.3	Future noise exposure trends	261
8.4	The direction of legislation	267
8.5	The "pseudofootprint"	271
8.6	The "reference" noise level	273
8.7	Certification control	274
8.8	Relationship to the airport	278
8.9	The future – a summary	279
9	Review	281
Appendices		285
1	Noise levels, scales and indices	285
2	Abbreviations and acronyms	290
3	Useful addresses: partial listing of organisations concerned with noise in aerospace-manufacturing nations	294
4	Calculation of effective perceived noise-level data from measured noise data: excerpts from ICAO Annex 16	301
5	Calculation of aircraft noise contours around airports	319
6	Typical aircraft noise levels	325
