# Control of Electrical Drives

3rd Edition

Springer

# Contents

<b>Introduction</b> .....	1
<b>1. Elementary Principles of Mechanics</b> .....	7
1.1 Newtons Law .....	7
1.2 Moment of Inertia .....	9
1.3 Effect of Gearing .....	11
1.4 Power and Energy .....	12
1.5 Experimental Determination of Inertia .....	14
<b>2. Dynamics of a Mechanical Drive</b> .....	17
2.1 Equations Describing the Motion of a Drive with Lumped Inertia .....	17
2.2 Two Axes Drive in Polar Coordinates .....	20
2.3 Steady State Characteristics of Motors and Loads .....	22
2.4 Stable and Unstable Operating Points .....	26
<b>3. Integration of the Simplified Equation of Motion</b> .....	29
3.1 Solution of the Linearised Equation .....	29
3.1.1 Start of a Motor with Shunt-type Characteristic at No-load .....	30
3.1.2 Starting the Motor with a Load Torque Proportional to Speed .....	32
3.1.3 Loading Transient of the Motor Initially Running at No-load Speed .....	33
3.1.4 Starting of a DC Motor by Sequentially Short-circuiting Starting Resistors ....	35
3.2 Analytical Solution of Nonlinear Differential Equation .....	38
3.3 Numerical and Graphical Integration .....	39
<b>4. Thermal Effects in Electrical Machines</b> .....	43
4.1 Power Losses and Temperature Restrictions .....	43
4.2 Heating of a Homogeneous Body .....	44
4.3 Different Modes of Operation .....	48
4.3.1 Continuous Duty .....	48

4.3.2	Short Time Intermittent Duty .....	48
4.3.3	Periodic intermittent duty .....	49
<b>5.</b>	<b>Separately Excited DC Machine .....</b>	<b>51</b>
5.1	Introduction .....	51
5.2	Mathematical Model of the DC Machine .....	54
5.3	Steady State Characteristics with Armature and Field Control	56
5.3.1	Armature Control .....	57
5.3.2	Field Control .....	58
5.3.3	Combined Armature and Field Control .....	61
5.4	Dynamic Behaviour of DC Motor with Constant Flux .....	64
<b>6.</b>	<b>DC Motor with Series Field Winding .....</b>	<b>69</b>
6.1	Block Diagram of a Series-wound Motor .....	70
6.2	Steady State Characteristics .....	73
<b>7.</b>	<b>Control of a Separately Excited DC Machine .....</b>	<b>77</b>
7.1	Introduction .....	77
7.2	Cascade Control of DC Motor in the Armature Control Region	79
7.3	Cascade Control of DC Motor in the Field-weakening Region	90
7.4	Supplying a DC Motor from a Rotating Generator .....	93
<b>8.</b>	<b>Static Converter as a Power Actuator for DC Drives .....</b>	<b>97</b>
8.1	Electronic Switching Devices .....	97
8.2	Line-commutated Converter in Single-phase Bridge Connection	102
8.3	Line-commutated Converter in Three-phase Bridge Connection	119
8.4	Line-commutated Converters with Reduced Reactive Power ..	130
8.5	Control Loop Containing an Electronic Power Converter .....	133
<b>9.</b>	<b>Control of Converter-supplied DC Drives .....</b>	<b>139</b>
9.1	DC Drive with Line-commutated Converter .....	139
9.2	DC Drives with Force-commutated Converters .....	148
<b>10.</b>	<b>Symmetrical Three-Phase AC Machines .....</b>	<b>163</b>
10.1	Mathematical Model of a General AC Machine .....	164
10.2	Induction Motor with Sinusoidal Symmetrical Voltages in Steady State .....	176
10.2.1	Stator Current, Current Locus .....	176
10.2.2	Steady State Torque, Efficiency .....	182
10.2.3	Comparison with Practical Motor Designs .....	186
10.2.4	Starting of the Induction Motor .....	187
10.3	Induction Motor with Impressed Voltages of Arbitrary Wave- forms .....	190
10.4	Induction Motor with Unsymmetrical Line Voltages in Steady State .....	202

10.4.1	Symmetrical Components .....	202
10.4.2	Single-phase Induction Motor .....	206
10.4.3	Single-phase Electric Brake for AC Crane-Drives .....	209
10.4.4	Unsymmetrical Starting Circuit for Induction Motor ..	211
<b>11.</b>	<b>Power Supplies for Adjustable Speed AC Drives .....</b>	<b>215</b>
11.1	Pulse width modulated (PWM) Voltage Source Transistor Converter (IGBT) .....	218
11.2	Voltage Source PWM Thyristor Converter .....	225
11.3	Current Source Thyristor Converters .....	232
11.4	Converter Without DC Link (Cycloconverter) .....	236
<b>12.</b>	<b>Control of Induction Motor Drives .....</b>	<b>241</b>
12.1	Control of Induction Motor Based on Steady State Machine Model .....	242
12.2	Rotor Flux Orientated Control of Current-fed Induction Motor	252
12.2.1	Principle of Field Orientation .....	252
12.2.2	Acquisition of Flux Signals .....	260
12.2.3	Effects of Residual Lag of the Current Control Loops .	262
12.2.4	Digital Signal Processing .....	265
12.2.5	Experimental Results .....	268
12.2.6	Effects of a Detuned Flux Model .....	269
12.3	Control of Voltage-fed Induction Motor .....	275
12.4	Field Orientated Control of Induction Motor with a Current Source Converter .....	281
12.5	Control of an Induction Motor Without a Mechanical Sensor .	289
12.5.1	Machine Model in Stator Flux Coordinates .....	289
12.5.2	Example of an "Encoderless Control" .....	291
12.5.3	Simulation and Experimental Results .....	296
12.6	Control of an Induction Motor Using a Combined Flux Model	298
<b>13.</b>	<b>Induction Motor Drive with Reduced Speed Range .....</b>	<b>303</b>
13.1	Doubly-fed Induction Machine with Constant Stator Fre- quency and Field-orientated Rotor Current .....	303
13.2	Control of a Line-side Voltage Source Converter as a Reactive Power Compensator .....	317
13.3	Wound-Rotor Induction with Slip-Power Recovery .....	323
<b>14.</b>	<b>Variable Frequency Synchronous Motor Drives .....</b>	<b>329</b>
14.1	Control of Synchronous Motors with PM Excitation .....	331
14.2	Synchronous Motor with Field- and Damper-Windings .....	342
14.3	Synchronous Motor with Load-commutated Inverter (LCI- Drive) .....	349

**15. Some Applications of Controlled Electrical Drives** ..... 363

    15.1 Speed Controlled Drives ..... 364

    15.2 Linear Position Control ..... 373

    15.3 Linear Position Control with Moving Reference Point ..... 383

    15.4 Time-optimal Position Control with Fixed Reference Point .. 389

    15.5 Time-optimal Position Control with Moving Reference Point . 396

**Bibliography**..... 402

**Index** ..... 455
