|---|-----------|
| <i>Preface to the fifth edition</i>                   | vii       |
| <i>Preface to the first edition</i>                   | viii      |
| <b>1 Water – a precious natural resource</b>          | <b>1</b>  |
| 1.1 The development of water and wastewater services  | 1         |
| 1.2 Sustainable development                           | 4         |
| 1.3 Water resources                                   | 6         |
| 1.4 The role of engineers and scientists              | 8         |
| <b>2 Characteristics of waters and wastewaters</b>    | <b>12</b> |
| 2.1 Physical characteristics                          | 13        |
| 2.2 Chemical characteristics                          | 14        |
| 2.3 Biological characteristics                        | 19        |
| 2.4 Typical characteristics                           | 20        |
| <b>3 Sampling and analysis</b>                        | <b>28</b> |
| 3.1 Sampling  | 28        |
| 3.2 Analytical methods                                | 29        |
| 3.3 Automated analysis, remote monitoring and sensing | 35        |
| <b>4 Aquatic microbiology and ecology</b>             | <b>39</b> |
| 4.1 Types of metabolism                               | 39        |
| 4.2 Nomenclature                                      | 40        |
| 4.3 Types of microorganism                            | 40        |
| 4.4 Microbiological examination                       | 45        |
| 4.5 Ecological principles                             | 47        |
| <b>5 Water quality and health</b>                     | <b>51</b> |
| 5.1 Characteristics of diseases                       | 52        |
| 5.2 Water-related disease                             | 52        |
| 5.3 Chemical-related illness                          | 57        |
| <b>6 Biological oxidation of organic matter</b>       | <b>63</b> |
| 6.1 Nature of organic matter                          | 64        |
| 6.2 Biochemical reactions                             | 64        |
| 6.3 Nature of biological growth                       | 65        |
| 6.4 Oxygen demand in aerobic oxidation                | 68        |
| 6.5 Anaerobic oxidation                               | 73        |

|           |  |            |
|-----------|--|------------|
| <b>7</b>  | <b>Water pollution and its control</b>     | <b>76</b>  |
| 7.1       | Types of pollutant                         | 76         |
| 7.2       | Self-purification                          | 78         |
| 7.3       | Toxic materials                            | 85         |
| 7.4       | Overall effects of pollution               | 87         |
| 7.5       | Groundwater pollution                      | 89         |
| 7.6       | Pollution of tidal waters                  | 90         |
| 7.7       | Control of pollution                       | 91         |
| <b>8</b>  | <b>Water demands and wastewater flows</b>  | <b>107</b> |
| 8.1       | Domestic water demand                      | 107        |
| 8.2       | Industrial water demand                    | 108        |
| 8.3       | Demand management                          | 109        |
| 8.4       | Population growth                          | 112        |
| 8.5       | Wastewater flow                            | 114        |
| 8.6       | Variations in flow                         | 116        |
| <b>9</b>  | <b>Introduction to treatment processes</b> | <b>119</b> |
| 9.1       | Methods of treatment                       | 119        |
| 9.2       | Optimized design                           | 120        |
| 9.3       | Control and operation                      | 123        |
| <b>10</b> | <b>Preliminary treatment processes</b>     | <b>127</b> |
| 10.1      | Screening and straining                    | 127        |
| 10.2      | Microstraining                             | 129        |
| 10.3      | Grit removal                               | 129        |
| 10.4      | Flow measurement and distribution          | 130        |
| <b>11</b> | <b>Clarification</b>                       | <b>131</b> |
| 11.1      | Theory of sedimentation                    | 131        |
| 11.2      | The ideal sedimentation basin              | 135        |
| 11.3      | Measurement of settling characteristics    | 138        |
| 11.4      | Efficiency of sedimentation tanks          | 142        |
| 11.5      | Types of sedimentation tank                | 143        |
| 11.6      | Gravity thickening                         | 144        |
| 11.7      | Flotation                                  | 147        |
| <b>12</b> | <b>Coagulation</b>                         | <b>151</b> |
| 12.1      | Colloidal suspensions                      | 151        |
| 12.2      | Flocculation                               | 152        |
| 12.3      | Coagulation                                | 154        |
| 12.4      | Mechanism of coagulation                   | 158        |

|   |            |
|---|------------|
| <b>13 Flow through porous media</b>                               | <b>162</b> |
| 13.1 Hydraulics of filtration                                     | 162        |
| 13.2 Filter clogging  | 165        |
| 13.3 Filter washing   | 166        |
| 13.4 Types of filter  | 169        |
| 13.5 Filter operation and control                                 | 172        |
| <b>14 Aerobic biological oxidation</b>                            | <b>176</b> |
| 14.1 Principles of biological oxidation                           | 176        |
| 14.2 Types of aerobic oxidation plant                             | 179        |
| 14.3 Biological filter  | 179        |
| 14.4 Activated sludge   | 184        |
| 14.5 Oxidation pond   | 190        |
| 14.6 Land treatment   | 192        |
| <b>15 Anaerobic biological oxidation</b>                          | <b>196</b> |
| 15.1 Principles of anaerobic oxidation                            | 196        |
| 15.2 Applications of anaerobic treatment                          | 198        |
| 15.3 Operation of digesters                                       | 200        |
| <b>16 Disinfection</b>  | <b>203</b> |
| 16.1 Theory of disinfection                                       | 203        |
| 16.2 Chlorine   | 205        |
| 16.3 Ozone  | 208        |
| 16.4 Ultraviolet radiation  | 209        |
| 16.5 Other disinfectants  | 209        |
| <b>17 Chemical treatment</b>                                      | <b>212</b> |
| 17.1 Chemical precipitation                                       | 212        |
| 17.2 Ion exchange   | 216        |
| 17.3 Adsorption   | 219        |
| <b>18 Sludge dewatering and disposal</b>                          | <b>223</b> |
| 18.1 Sludge characteristics                                       | 223        |
| 18.2 Sludge conditioning  | 225        |
| 18.3 Sludge dewatering  | 226        |
| 18.4 Sludge stabilization   | 229        |
| 18.5 Sludge disposal  | 230        |
| <b>19 Tertiary treatment, water reclamation and re-use</b>        | <b>238</b> |
| 19.1 Tertiary treatment   | 238        |
| 19.2 Water reclamation and re-use                                 | 241        |
| 19.3 Removal of impurities not amenable to conventional treatment | 248        |
| 19.4 Physico-chemical treatment of wastewater                     | 256        |

vi CONTENTS

|   |            |
|---|------------|
| <b>20 Water supply and sanitation in developing countries</b> | <b>259</b> |
| 20.1 The current situation                                    | 259        |
| 20.2 Sources of water   | 260        |
| 20.3 Water treatment  | 262        |
| 20.4 Sanitation   | 265        |
| 20.5 Effluent disposal  | 269        |
| <b>Index</b>  | <b>273</b> |
