NUMERICAL MODELLING IN GEOMECHANICS

- Editorial — Félix Darve 891
- Steady state problems of elliptic type — Manuel Pastor, Pablo Mira 893
- Transient problems of parabolic type — Manuel Pastor,
José Antonio Fernandez Merodo 915
- Constitutive modelling for rate-independent soils: a review
Claudio Tamagnini, Gioacchino Viggiani 933
- Coupling equations for water saturated and partially saturated
geomaterials. A mathematical model for multiphase porous materials:
fundamentals and formulation — Bernhard A. Schrefler,
Lorenzo Sanavia 975
- Continuum damage modelling and some computational issues
Gilles Pijaudier-Cabot, Ludovic Jason 991
- Non linear problems: Introduction — Pablo Mira, Manuel Pastor 1019
- Small strain vs large strain formulation in computational mechanics
René Chambon 1037

- Implicit integration of constitutive equations in computational plasticity
Claudio Tamagnini, Riccardo Castellanza, Roberto Nova 1051
- Non linear problems: Advanced Techniques — Pablo Mira,
Manuel Pastor 1069
- A finite element model for water saturated and partially
saturated geomaterials. Space and time discretisation
for a multiphase porous material model — Lorenzo Sanavia,
Bernhard A. Schrefler 1083
- Alternative formulations in soil dynamics — Manuel Pastor,
Mokhtar Mabssout 1099
- Objective modeling of strain localization — Milan Jirásek 1119
- Numerical modeling of strong discontinuities — Milan Jirásek 1133
- Practical aspects of the finite element method — Manuel Pastor,
Pablo Mira, José Antonio Fernandez Merodo 1147
- Mechanical effects of chemical degradation of bonded geomaterials
in boundary value problems — Riccardo Castellanza, Roberto Nova,
Claudio Tamagnini 1169
- Finite Element Modelling of Landslides
José Antonio Fernandez Merodo, Manuel Pastor 1193
- Modelling of Debris Flows and Flow Slides — Manuel Pastor,
José Antonio Fernandez Merodo, Manuel Quecedo,
Maria Isabel Herreros, Elena González, Pablo Mira 1213

Numerical Modelling in Geomechanics

Steady state problems of elliptic type – Manuel Pastor, Pablo Mira

Transient problems of parabolic type
Manuel Pastor, J.A. Fernandez Merodo

Constitutive modelling for rate-independent soils: a review
Claudio Tamagnini, Gioacchino Viggiani

Coupling equations for water saturated and partially saturated geomaterials
Bernhard A. Schrefler, Lorenzo Sanavia

Continuum damage modelling and some computational issues
Gilles Pijaudier-Cabot, Ludovic Jason

Non linear problems: Introduction – Pablo Mira, Manuel Pastor

Small strain vs large strain formulation in computational mechanics
René Chambon

Implicit integration of constitutive equations in computational plasticity
Claudio Tamagnini, Riccardo Castellanza, Roberto Nova

Non linear problems: Advanced Techniques – Pablo Mira, Manuel Pastor

A finite element model for water saturated and partially saturated geomaterials
Lorenzo Sanavia, Bernhard A. Schrefler

Alternative formulations in soil dynamics – Manuel Pastor, Mokhtar Mabssout

Objective modeling of strain localization – Milan Jirásek

Numerical modeling of strong discontinuities – Milan Jirásek

Practical aspects of the finite element method
Manuel Pastor, Pablo Mira, J.A. Fernandez Merodo

Mechanical effects of chemical degradation of bonded geomaterials
in boundary value problems

Riccardo Castellanza, Roberto Nova, Claudio Tamagnini

Finite Element Modelling of Landslides – J.A. Fernandez Merodo, Manuel Pastor

Modelling of Debris Flows and Flow Slides

Manuel Pastor, J.A. Fernandez Merodo, Manuel Quecedo, Maria Isabel Herreros
Elena González, Pablo Mira
