Identification and Control of Sheet and Film Processes

With 63 Figures

Springer

CONTENTS

Part I. BACKGROUND

1.	Sheet and Film Processes	3
1.1	Plastic Film Extrusion	4
1.2	Papermaking	8
1.3	Coating	11
1.4	Metal Rolling	12
1.5	Book Organization	14
2.	Process Characteristics	15
2.1	Traversing and Full-scan Sensors	15
2.2	Actuators	16
2.3	Process Dynamics	16
2.4	Interactions and Model Structures	18
2.4.1	Toeplitz Symmetric	19
2.4.2	Circulant Symmetric	20
2.4.3	Centrosymmetric	21
2.4.4	Pseudo-singular Value Decomposition	22
2.4.5	Modal Decomposition	27
2.4.6	Other Model Structures	30
2.5	Large-scale Systems	30
2.6	Model Uncertainty	32
3.	Literature Review	37
3.1	Linear Control	37
3.2	Linear Control with Antiwindup Compensation	38
3.2.1	Directionality Compensation	39
3.2.2	Observer-based Compensation	39
3.2.3	IMC-based Antiwindup Compensation	39
3.3	Model Predictive Control	40
3.4	Robust Control	42
3.5	Profile Estimation	44
3.6	Model Identification	46
3.7	Process Monitoring	47
3.7.1	Fault Detection	48

3.7.2	Fault Isolation	48
3.7.3	Fault Compensation	49

Part II. IDENTIFICATION AND CONTROL

4.	Model Requirements and Process Identification.....	53
4.1	Model Requirements	53
4.2	Coupling Model Identification and Control.....	55
4.2.1	Model Identification	56
4.2.2	Controller Design.....	56
4.3	Simulation Studies.....	58
4.3.1	An Illustrative Example	58
4.3.2	Blown Film Extruder	66
4.4	Conclusions and Implications for Input Design	69
4.5	Proof of Theorem 4.1	70
5.	Design of Experiments.....	73
5.1	Previous Research on Experimental Design	73
5.2	Process Gain Estimation	74
5.3	Problem Formulation for Constrained Input Design	78
5.3.1	Constraints	78
5.3.2	Modification of the Objective Function	79
5.3.3	Constrained Input Design Via Simulated Annealing...	79
5.4	Simulation Case Study	80
5.4.1	Model Identification	81
5.4.2	Time Domain Simulations	84
6.	Robust Control.....	87
6.1	Background.....	87
6.2	Optimal Robust Controller Design	91
6.2.1	Processes with General Interaction Matrices	92
6.2.2	Symmetric Nominal Models.....	96
6.2.3	Remarks	96
6.3	Low-order Robust Controller Design	97
6.3.1	LTI Uncertainty	97
6.3.2	SLTV, NLTV, NLTI, LTV Uncertainties.....	99
6.3.3	Multiplicative or Additive LTI Uncertainties	101
6.3.4	Implementation	102
6.4	Applications	102
6.4.1	Paper Machine Model.....	102
6.4.2	The Inadequacy of Commercial Software	104
6.4.3	Repeated Scalar Input and Output Uncertainties	105
6.4.4	Low-order Robust Controller Design	106
6.4.5	Full-block Input and Output Uncertainties.....	113

6.5 Summary..... 116

6.6 Proofs 118

7. Model Predictive Control..... 129

7.1 Problem Formulation 129

7.2 Fast MPC Algorithm 132

7.3 Industrial Paper Machine Simulation Study 135

7.4 Summary..... 140

8. Afterword 145

References..... 149

Index 169

Sheet and film processes include coating, papermaking, metal rolling, and polymer film extrusion. The products of these processes include paper, bumper stickers, plastic bags, windshield safety glass, and sheet metal. The total capitalization of industries that rely on these processes is well over \$500 billion worldwide. These processes are notorious for being difficult to control.

The goal of this book is to present the theoretical background and practical techniques for the identification and control of sheet and film processes. The reasons why many existing industrial control systems perform poorly for sheet and film processes are explained. Identification and control algorithms which provide consistent and reliable product quality are described and illustrated. These algorithms include an experimental design technique that ensures that informative data are collected during input-output experimentation, model identification techniques that produce a process model and an estimate of its accuracy, and control techniques that take into account actuator constraints as well as robustness to model uncertainties.

The algorithms covered in this book are truly the state of the art. Variations on some of the algorithms have been implemented on industrial sheet and film processes. Other algorithms are in various stages of implementation. All of the algorithms have been applied to realistic simulation models constructed from industrial plant data; many of these studies are included in this book.

Advances in Industrial Control aims to report and encourage the transfer of technology in control engineering. The rapid development of control technology has an impact on all areas of the control discipline. The series offers an opportunity to present an extended exposition of new developments in industrial control.
