

Solid Freeform Manufacturing

D. Kochan

Contents

1.	Introduction	1
2.	Advanced Manufacturing Technology: The State of the Art	3
2.1	Complex Machining with NC Technology	4
2.2	Application of New Physical Principles	7
2.3	Comparison of NC Technology and Solid Freeform Manufacturing	8
2.3.1	Similarities	8
2.3.2	Differences	9
2.3.2.1	Data and input preparation	9
2.3.2.2	Process controlling and realization	10
2.3.2.3	Material aspects	10
2.4	Importance of Solid Freeform Manufacturing	11
2.4.1	CIM-adapted procedure	11
2.4.2	SFM in an integrated product development environment (concurrent engineering)	12
2.4.3	Relations with the traditional manufacturing processes	13
3.	Solid Freeform Manufacturing	15
3.0	Historical Development	15
3.1	Principle and Terms	16
3.2	Features and Possibilities for Classification	19
3.2.1	Division by lighting of photopolymers	19
3.2.2	Division by materials used	20
3.2.3	Division by energy used	21
3.2.4	Division by typical application ranges	22
3.2.4.1	Prototypes for evaluations of design	22
3.2.4.2	Prototypes for functional tests and evaluation	23
3.2.4.3	Models for further manufacturing processes	23
4.	Industrial Application of SFM Techniques	25
4.1	Point-by Point Layer Solidification: Stereolithography	25
4.1.1	General principle	25
4.1.2	Preparation tasks	26
4.1.3	Stereolithography procedure: layer solidification	27
4.1.4	Postprocessing	30
4.1.5	Material requirements and properties	31

4.2	Stereolithography (3D Systems)	32
4.2.1	Functional principle	32
4.2.2	Hardware	35
4.2.3	Process sequence	41
4.2.3.1	CAD data transfer and CAD interface	41
4.2.3.2	Software module VIEW	42
4.2.3.3	SLICE	44
4.2.3.4	The MERGE module	46
4.2.3.5	The module PREPARE	47
4.2.3.6	The module BUILD the model	49
4.2.3.7	Start the machine	50
4.2.4	Technological parameters	50
4.2.5	Application range	51
4.2.6	Advantages and disadvantages	51
4.2.6.1	Advantages	51
4.2.6.2	Disadvantages	52
4.3	Stereography – EOS	53
4.3.1	Functional principle	53
4.3.2	Hardware and software	54
4.3.3	Process sequence	56
4.3.4	Technological features	58
4.3.5	Application ranges	60
4.3.6	Advantages and disadvantages	61
4.4	Solid Object UV Laser Plotter (SOUP – CMET Japan)	63
4.4.1	Functional principle	63
4.4.2	Hardware configuration	63
4.4.3	Process sequence	65
4.4.4	Technological and economic features	67
4.4.5	Application range	67
4.4.6	Advantages and disadvantages	67
4.5	Solid Creation System SCS (D-MEC CAD)	69
4.5.1	Functional principle	69
4.5.2	Hardware configuration	69
4.5.3	Process sequence	71
4.5.4	Technological features	72
4.5.5	Application range	72
4.5.6	Advantages and disadvantages	73
4.6	Computer Operated Laser Active Modelling Machine (COLAMM)- Mitsui Engineering	74
4.6.1	Functional principle	74
4.6.2	Hardware configuration	74
4.6.3	Process sequence	74
4.6.4	Technological features	75
5.	Illumination of Planes	77
5.1	General Principle	77

5.2	Solid Ground Curing Processes: SMP Solider 5600	77
5.2.1	Functional principle	77
5.2.2	Hardware	79
5.2.3	Process sequence	81
5.2.4	Technological and economic features	83
5.2.5	Application range	84
5.2.6	Advantages and disadvantages	85
5.3	Light Sculpting (LSJ)	87
5.3.1	Principle	87
5.3.2	Hardware	87
5.3.3	Process sequence	89
5.3.4	Technological features	89
5.3.5	Application range	90
5.3.6	Advantages and disadvantages	90
6.	Solidification of Powder or Other Materials	93
6.0	General Remarks	93
6.1	Selective Laser Sintering – SLS-sinterstation 2000	93
6.1.1	Functional principle	93
6.1.2	Hardware and software	94
6.1.3	The process sequence and parameters	97
6.1.4	Technological and economic features	100
6.1.5	Application range	102
6.1.6	Advantages and disadvantages	105
6.2	Fused Deposition Modelling (FDM)	107
6.2.1	Functional principle	107
6.2.2	Hardware	107
6.2.3	Process sequence	108
6.2.4	Technological and economic features	109
6.2.5	Application ranges	110
6.2.6	Advantages and disadvantages	111
6.3	Laminated Object Manufacturing – LOM	113
6.3.1	Functional principle	113
6.3.2	Hardware	113
6.3.3	Process sequence	114
6.3.4	Technological and economic features	116
6.3.5	Application range	116
6.3.6	Advantages and disadvantages	116
6.4	3-D-Printing	118
6.4.1	Functional principle	118
6.4.2	Hardware	118
6.4.3	Process sequence	119
6.4.4	Technological features	120
6.4.5	Application range	120
6.4.6	Advantages and disadvantages	121
6.5	Ballistic Particle Manufacturing – BPM	121

7.	General Tasks for Process Realization	123
7.1	The Process Chain for SFM Procedures and Integration Aspects	123
7.2	Geometrical Modelling	124
7.2.1	Basic terms and methodologies	125
7.2.2	Rules and requirements for efficient SFM utilization	128
7.2.2.1	Basic rules and requirements	129
7.2.2.2	Requirements related to specific SFM techniques	131
7.2.3	Data handling and interfacing aspects	132
7.3	Process Planning and Operational Planning	134
7.3.1	General requirements concerning systematic operational planning	134
7.3.2	Process documentation for SFM procedures	135
7.3.2.1	Necessities and general tasks	135
7.3.2.2	Proposal for unified process documentation	136
7.3.2.3	Utilization of the information content of the general operational document	136
7.3.4	Postprocessing	137
8.	Application Areas	139
8.1	General Aspects	139
8.2	Design Support	141
8.2.1	CAD model verification	141
8.2.2	Visual objects	141
8.3	Function Models	142
8.3.1	Packaging models	142
8.3.2	Form and fit models	142
8.3.3	Flow analysis	143
8.3.4	Analysis of stress distribution	144
8.3.5	Mock-up parts	145
8.3.6	Pre-production-parts	145
8.4	Manufacturing Models	145
8.4.1	Plastic mould parts	145
8.4.1.1	Vacuum casting with silicon moulding	145
8.4.1.2	Metal spraying	147
8.4.2	Casting	150
8.4.3	EDM electrodes	154
8.4.4	Master models	154
8.5	Finishing Process Possibilities	154
8.5.1	Cutting processes	154
8.5.2	Sand-blasting and polishing	155
8.5.3	Coating	155
8.5.4	Painting	155
8.6	Comparison with Other Manufacturing Processes	156

9.	Manufacturing Materials	159
9.1	Fluids	160
9.1.1	Physical properties	160
9.1.2	Basic material characteristics	161
9.1.2.1	Viscosity	162
9.1.2.2	Surface tension	162
9.1.2.3	Volatility	162
9.1.2.4	Material uniformity and stability	163
9.1.3	Material handling procedures	163
9.1.3.1	Vat material temperature	163
9.1.3.2	Bubble formation/release	163
9.1.3.3	Addition of new material to the vat	164
9.1.3.4	Contamination	164
9.1.4	Imaging properties	164
9.1.4.1	Material "working curve"	164
9.1.5	Postprocessing procedures	165
9.1.5.1	Cleaning and swelling	165
9.1.5.2	Post-curing	165
9.1.5.3	Finishing	165
9.1.6	Health and environmental aspects	166
9.2	Powder, Wire and Laminates	166
10.	Related Manufacturing Process	167
10.1	3-axis NC Milling	167
10.1.1	Application areas	167
10.1.2	NC milling based on digitized data	169
10.2	3-axis High-speed Cutting	171
10.3	5-axis Milling	174
11.	Decision Making and Economic Aspects	179
11.1	Deciding Whether to Invest or Farm Out	179
11.1.1	Characteristics of the problem	179
11.1.2	Systematic approach for decision-making	181
11.2	Part Classification for SFM	183
11.3	Methodology for Execution of SFM Benchmark Tests	185
11.3.1	General remark	185
11.3.2	Principal possibilities for SFM benchmark tests	185
11.3.3	Aspects for determination of a challenge (or sample), test part	186
11.3.3.1	Main aspects	186
11.3.3.2	Specific aspects of the TUD. NCG test part	187
11.3.3	Results of the tests	187
11.4	Economic Aspects and Criteria for Economic Justification	190
11.4.1	Cost engineering for SFM procedures	192

	11.4.1.1	CAD 3-D modelling	192
	11.4.1.2	Data transfer and model data checking	193
	11.4.1.3	Data preparation	193
	11.4.1.4	Building procedure	194
	11.4.1.5	Postprocessing work	194
	11.4.1.6	Other costs	195
	11.4.2	Overall economic justification	195
11.5		Comparison of Traditional and New Procedures	195
	11.5.1	General remarks	195
	11.5.2	Cost calculation scheme	197
	11.5.2.1	CAD modelling	198
	11.5.2.2	Tool path generation	198
	11.5.2.3	Purchasing or construction of tools, fixtures etc.	198
	11.5.2.4	Machine preparation	198
	11.5.2.5	Milling	199
	11.5.2.6	Maintenance costs	199
11.6		Organisational Aspects	199
12.		Further Development Trends	201
12.1		Improvement of Commercially Available Systems	201
12.2		Important Further Developments	202
