Discrete-Time
Markov Control
Processes

Basic Optimality Criteria

Springer

Contents

Preface	vii
Abbreviations and Notation	xiii
1 Introduction and Summary	1
1.1 Introduction	1
1.2 Markov control processes	2
1.3 Preliminary examples	5
1.4 Summary of the following chapters	9
2 Markov Control Processes	13
2.1 Introduction	13
2.2 Markov control processes	14
2.3 Markov policies and the Markov property	17
3 Finite-Horizon Problems	23
3.1 Introduction	23
3.2 Dynamic programming	24
3.3 The measurable selection condition	27
3.4 Variants of the DP equation	31
3.5 LQ problems	34
3.6 A consumption-investment problem	37
3.7 An inventory-production system	39
4 Infinite-Horizon Discounted-Cost Problems	43
4.1 Introduction	43
4.2 The discounted-cost optimality equation	45
4.3 Complements to the DCOE	53

4.4	Policy iteration and other approximations	56
4.5	Further optimality criteria	60
4.6	Asymptotic discount optimality	63
4.7	The discounted LQ problem	70
4.8	Concluding remarks	72
5	Long-Run Average-Cost Problems	75
5.1	Introduction	75
5.2	Canonical triplets	77
5.3	The vanishing discount approach	83
5.4	The average-cost optimality inequality	86
5.5	The average-cost optimality equation	95
5.6	Value iteration	101
5.7	Other optimality results	113
5.8	Concluding remarks	122
6	The Linear Programming Formulation	125
6.1	Introduction	125
6.2	Infinite-dimensional linear programming	127
6.3	Discounted cost	131
6.4	Average cost: preliminaries	145
6.5	Average cost: solvability	155
6.6	Further remarks	166
	Appendix A Miscellaneous Results	169
	Appendix B Conditional Expectation	173
	Appendix C Stochastic Kernels	175
	Appendix D Multifunctions and Selectors	181
	Appendix E Convergence of Probability Measures	185
	References	191
	Index	211
