The COBOL Companion

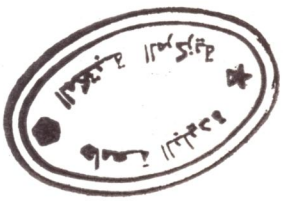
CA·41



Richard Yorke
Computer Consultant

and

Mary Spence
Lecturer in Department of Information Systems
School of Computing and Mathematical Sciences
De Montfort University, Leicester

Edward Arnold
A member of the Hodder Headline Group
LONDON MELBOURNE AUCKLAND

Contents

Preface vii

Acknowledgements ix

1 Introduction 1
- 1.1 Program development phases 1
- 1.2 Common computing problems 1
- 1.3 Pseudo code 2
- 1.4 Do ahead 3
- 1.5 COBOL used in the text 3
- 1.6 The example scenario 5
- 1.7 Testing 6
- 1.8 The 21st century 6

2 Screen menus 8
- 2.1 Introduction 8
  - Menu for Example System; security 8
  - CALL; nested programs 8
- 2.2 Pseudo-code 9
  - 2.2.1 Outline solution 9
  - 2.2.2 Detailed solution 9
- 2.3 Coding considerations 11
  - Choice of paragraph structure; level 88s 11
  - FILE STATUS 12
- 2.4 COBOL version of this solution. (PERSMENU.CBL). 12
- 2.5 Discussion of menu variations 15
  - 2.5.1 'Are you sure' check before exit 15
  - 2.5.2 Scrolling bar menu 15
  - 2.5.3 Various useful non-standard COBOL features 16
  - 2.5.4 'Help' screens 16
  - 2.5.5 Delay loops 17
- 2.6 Testing checklist 17
- 2.7 Practical assignments 18

3 Keyboard data input 20
- 3.1 Introduction 20
  - Types of input; need for loops 20
- 3.2 Pseudo-code 20

3.2.1 Simple validations with no error message 20
3.2.2 Simple validations with an error message/bell 21
3.2.3 More complex validations 21
3.2.4 Validation of many fields at a time 22
3.3 Coding considerations 24
3.3.1 Case conversion 24
3.3.2 With test before/after 25
3.3.3 Class testing 26
3.3.4 Entering data into edit patterns 27
3.4 COBOL code for some validation loops 27
3.4.1 Simple validations with no error message 27
3.4.2 Simple validation with error message/bell 28
3.4.3 More complex validation 28
3.4.4 Validation of many fields at a time 29
3.5 Discussion of other features 29
3.5.1 Entering of all data before validation 29
3.5.2 User quit or help options 31
3.5.3 Date validations 31
3.5.4 Menu lists for valid input values 33
3.6 Testing checklist 33
3.7 Practical assignments 33

4 Sequential processing of files **36**
4.1 Introduction 36
Sequential reading 36
Common questions 36
4.2 Pseudo-code 36
4.2.1 Logic for simple sequential reading 36
4.2.2 Notes relating to the pseudo-code 37
4.3 Coding considerations 37
4.3.1 The Program Extract 37
4.3.2 Access Mode of the Input File 38
4.3.3 Header Records 38
4.3.4 'End Of File' Flag Versus FILE STATUS 38
4.3.5 Operator Messages 38
4.3.6 Use Of STOP RUN. 39
4.4 COBOL extract based on the early retirement program 39
4.5 Discussion of other features 41
4.5.1 'Read Ahead' 41
4.5.2 Several Input Files 42
4.5.3 Partial Sequential Reading Of An Indexed File 42
4.6 Testing checklist 42
4.7 Practical assignments 43

5 Reports **44**
5.1 Introduction 44
Report generators; screen v page reports 44
A typical report 44
5.2 Pseudo-code 45
5.2.1 Outline logic for a simple report 45
5.2.2 Notes relating to the outline pseudo-code 46
5.2.3 Detailed logic for a simple report 46

5.2.4 Notes relating to the detailed pseudo-code 47
5.3 Coding considerations 47
5.3.1 The User Requirement 47
5.3.2 Coding Considerations Relating To The Input 48
5.3.3 Extracting The Eligible Employees 48
5.3.4 An Empty Report 48
5.3.5 Providing The Site Totals 48
5.3.6 Error Messages 50
5.4 COBOL version of early retirement report 50
5.5 Discussion of other features 55
5.5.1 Control Breaks 55
5.5.2 Multiple Control Breaks 57
5.5.3 Loop Control Breaks Versus Conditional Control Breaks 58
5.5.4 Physical Lines Versus Logical Lines 59
5.5.5 Screen or Printer Reports 60
5.5.6 Report Writer 61
5.6 Testing checklist 62
5.7 Practical assignments 64

6 Direct access processing **65**
6.1 Introduction 65
general historical discussion; direct access 65
facilities; RELATIVE v INDEXED. 66
6.2 Pseudo-code 66
6.2.1 Outline logic for Menu 68
6.2.2 Amend option 68
6.2.2.1 Outline solution for amend 68
6.2.2.2 Detailed solution for amend 69
6.2.3 Outline logic for insert 70
6.2.3.1 User inputs key 70
6.2.3.2 Key is obtained from header record or file 70
6.2.4 Outline logic for delete 71
6.2.5 Outline logic for view 72
6.3 Coding considerations 72
Screen design; nested program structure diagram; 72
Suggested approach to coding 75
6.4 COBOL version of program to maintain master file 77
6.5 Discussion of other features 81
6.5.1 Multi-user system 81
6.5.2 System with more than one master file 81
6.5.3 Use of colour 81
6.5.4 Use of function keys 81
6.5.5 'Help' screens 82
6.5.6 Different method for maintenance sub menu 82
6.5.7 'View' with scrolling, ALTERNATE KEYs 82
6.6 Testing checklist 83
6.7 Practical assignments 84

7 Example COBOL programs **86**
7.1 COPY file for master personnel file SELECT statement 86
7.2 COPY file for master personnel file FD entry 86
7.3 Personnel system menu program 88

7.4 Personnel file maintenance program 92
7.5 Early retirement report program 113

8 COBOL debugging checklist **124**

Index **130**
