

Dr. Amar GHOUL

FRACTURE MECHANICS

Translated by Mehdy TAALLAH

TABLE OF CONTENTS

Preface	
Preamble	
Foreword	
Fracture mechanics	15
1. Introduction	17
2. Domain of application	18
3. Fracture modes	19
Chapter 1: Crack tip stress field	21
1. Methods using the theory of elasticity	24
2. Methods using the complex functions.....	29
Chapter 2: Stress concentration	63
1. Introduction.....	65
2. Stress concentration causes	66
3. Stress concentration factor	66
4. Strain concentration factor	86
5. Notch effect on stress distribution.....	87
Chapter 3: Fracture facies	97
1. Zones constituting a cracked medium	99
2. Macro and microscopic Aspects of fracture surfaces	102
3. Evolution of facies for tests under constant amplitude loading	123
4. Fracture mechanisms in polymers and composite materials	131
5. Fracture mechanisms by damaging	134
Chapter 4: Characterisation of defects	145
1. Introduction.....	147
2. Interaction of defects.....	149
3. Re-characterisation of defects	160
4. Definition of the equivalent defect size.....	160
5. Method of using the design curve	162
6. Codes of symbols used to describe defects	164
Chapter 5: Introduction to the criteria of fracture initiation	167
1. Introduction.....	169
2. Different types of plasticity.....	171
3. Linear elastic fracture mechanics.....	177

Chapter 6: Stress criterion K_c	181
1. General formulation of the criterion.....	113
2. Plat widely infinite containing a series of cracks	187
3. Experimental determination of static toughness K_{Ic}	201
4. Determination of dynamic toughness K_{Ic}	222
5. Correlation between K_{Ic} and the mechanical characteristics	232
6. Parameters affecting toughness of materials	239
7. The limited loads of fracture mechanics specimens.....	260
Chapter 7: Ductile tearing of materials	265
1. Introduction.....	267
2. Energy balance of ductile tearing.....	269
3. Conclusion	281
Chapter 8: Determination of the stress intensity factor by the photoelasticimetry method	283
1. Irwin's Method	192
2. Bradley and Kobayashi's Method.....	294
3. Schroedl and Smith's method	295
4. Etheridge and Dally's method	295
5. Sandford and Dally's method	295
Chapter 9: Determination of toughness from Moire's fringes method	309
1. Introduction.....	311
2. Analysis	314
3. Conclusions.....	329
Chapter 10: Extension of linear elastic fracture mechanics	333
Chapter 11: Crack tip plastic zone	353
1. Analysis of the plastic zone by Irwin	355
2. Analysis of the plastic zone by Wheeler, Willenborg, Johnson <i>et.al.</i>	358
3. Analysis of the plastic zone by Dugdale	364
4. Analysis of the plastic zone with the aid of Tresca and Von Mises' criteria	366
5. Analysis of the plastic zone by other authors.....	370
6. Observation and study of the plastic zone using the photoelasticimetry method	375
7. The plastic zone size evolution	378
List of main used symbols	383
Glossary	389
