

Real-Time Systems and Software

004-131-1

Alan C. Shaw

Contents

Preface iii

► CHAPTER 1

Introduction: The World of Real-Time Systems 1

- 1.1 What Are Real-Time Systems? 1
 - 1.1.1 Real-Time versus Conventional Software 2
 - 1.1.2 A Comprehensive Example: Air Traffic Control 4
- Exercises 1.1 6
- 1.2 Some History 7
- 1.3 Computer Hardware for Monitoring and Control 9
 - Exercise 1.3 11
- 1.4 Software Engineering Issues 11
 - Exercise 1.4 14

► CHAPTER 2

Software Architectures 15

- 2.1 Process and State-Based Systems Model 15
 - 2.1.1 Periodic and Sporadic Processes 16
 - Exercise 2.1 19
- 2.2 Cyclic Executives 19
 - 2.2.1 CE Definitions and Properties 19
 - 2.2.2 Discussion 22
- Exercises 2.2 24
- 2.3 Foreground–Background Organizations 24
- 2.4 Standard OS and Concurrency Architectures 26
- 2.5 Systems Objects and Object-Oriented Structures 27
 - 2.5.1 Abstract Data Types 28
 - 2.5.2 General Object Classes 29
 - 2.5.3 OO for Everything: The Unified Modelling Language 30
- Exercises 2.5 32

► CHAPTER 3

Requirements and Design Specifications 33

- 3.1 Survey and Classification of Notations 34
- 3.2 Data Flow Diagrams 35
 - Exercises 3.2 38

3.3 Tabular Languages 39

Exercises 3.3 44

3.4 State Machines 45

Exercises 3.4 49

► CHAPTER 4

Systems of State Machines 50

- 4.1 Communicating Real-Time State Machines 50
 - 4.1.1 Basic Features 50
 - 4.1.2 Timing and Clocks 53
 - 4.1.3 Some CRSM Examples 57
 - 4.1.4 Semantics, Tools, and Extensions 62
- Exercises 4.1 65
- 4.2 Statecharts 67
 - 4.2.1 Concepts and Graphical Syntax 67
 - 4.2.2 Semantics and Tools 73
- Exercises 4.2 75

► CHAPTER 5

Declarative Specifications 76

- 5.1 Regular Expressions and Extensions 77
 - Exercises 5.1 81
- 5.2 Traditional Logics 82
 - 5.2.1 Propositional Logic 82
 - 5.2.2 Predicates 84
 - 5.2.3 Temporal Logic 85
- Exercises 5.2 86
- 5.3 Real-Time Logic 87
 - Exercises 5.3 90

► CHAPTER 6

Deterministic Scheduling 91

- 6.1 Assumptions and Candidate Algorithms 91
 - Exercises 6.1 95
- 6.2 Basic RM and EDF Results 96
 - Exercises 6.2 98
- 6.3 Relaxing the Assumptions 98
 - Exercises 6.3 100
- 6.4 Process Interactions: Priority Inversion and Inheritance 101
 - Exercises 6.4 105

- 6.5 Some Practical Issues 106
- Exercises 6.5 109

► CHAPTER 7

- Execution Time Prediction 110
- 7.1 Approaches and Issues 110
- Exercises 7.1 115
- 7.2 Measurement of Software by Software 115
- Exercises 7.2 117
- 7.3 Program Analysis with Timing Schema 118
- 7.3.1 Schema Concepts 118
- 7.3.2 Basic Blocks, Statements, and Control 119
- 7.3.3 Schema Practice 125
- Exercises 7.3 130
- 7.4 Prediction by Optimization 130
- Exercise 7.4 133
- 7.5 System Interferences and Architectural Complexities 134
- Exercise 7.5 135

► CHAPTER 8

- Keeping Time on Computers 136
- 8.1 Timer Applications 136
- 8.2 Properties of Real and Ideal Clocks 137
- 8.3 Clock Servers 139
- 8.3.1 Lamport's Logical Clocks 140
- 8.3.2 Monotonic Clock Service 142
- 8.3.3 A Software Clock Server 143
- 8.4 Clock Synchronization 144
- 8.4.1 Centralized Synchronization 144
- 8.4.2 Distributed Synchronization 146
- Exercises 8 149

► CHAPTER 9

- Programming Languages 150
- 9.1 Real-Time Language Features 150
- 9.2 Ada 151
- 9.2.1 Core Language 152
- 9.2.2 Annex Mechanisms for Real-Time Programming 158

- 9.3 Ada and Software Fault Tolerance 162
- 9.3.1 Software Failures: Prevention, Detection, and Recovery 162
- 9.3.2 Approaches to Design Diversity 164
- 9.4 Java and Real-Time Extensions 168
- 9.5 CSP and Occam 171
- 9.6 Esterel Concepts 174
- 9.7 The Real-Time Euclid system 178
- Exercises 9 180

► CHAPTER 10

- Operating Systems 181
- 10.1 Real-Time Functions and Services 182
- 10.2 OS Architectures 183
- 10.2.1 Real-Time UNIX and POSIX 184
- 10.2.2 Some Commercial and Research OSs 186
- 10.3 Issues in Task Management 189
- 10.3.1 Processes and Threads 189
- 10.3.2 Scheduling 190
- 10.3.3 Synchronization and Communications 190
- 10.4 Interrupts and the OS 193
- Exercises 10 194

► APPENDIX

- Air Traffic Control System—Project Specifications 195
- A.1 Purpose 195
- A.2 The Environment 196
- A.3 Inputs and Outputs 197
- A.3.1 ATC Inputs 197
- A.3.2 ATC Outputs 198
- A.4 Software Functions and Data, with Timing Constraints 199
- A.5 Project Requirements 200

Bibliography 201
