

# Ion Beam Handbook for Material Analysis

Edited by  
J. W. Mayer  
E. Rimini

# Contents

Chapter Editors and Contributors	vii
Preface	ix
Table A. Crystal Structure and Density of the Elements	xi
Table B. Elements: Isotope Mass, Abundance, and Atomic Weight and Density	xiii
Table C. Physical Constants and Conversion Factors	xxi

## 1. ENERGY LOSS AND ENERGY STRAGGLING

*W. K. Chu*

1.1 Introduction	2
1.2 Energy Loss	2
1.3 Energy Straggling	5
1.4 Additivity Rules of Energy Loss and Energy Straggling	10
1.5 References	11
Table 1.1 $^4\text{He}$ Stopping Cross Sections	15
Table 1.2 Energy Straggling Calculated for $^4\text{He}$ Ions in-Each Element	18

## 2. BACKSCATTERING SPECTROMETRY

*G. Foti, J. W. Mayer, and E. Rimini*

Table 2.1 $^1\text{H}$ Backscattering Kinematic Factor	22
Table 2.2 $^4\text{He}$ Backscattering Kinematic Factor	27
Table 2.3 1.0 MeV $\text{H}^+$ Effective Scattering Cross Section	32
Table 2.4 1.0 MeV $^4\text{He}^{++}$ Effective Scattering Cross Section	37
2.1 Backscattering Kinematic Factor	42
2.2 Differential Scattering Cross Section	42
2.3 Depth Scale	43
2.4 Depth Scale in Atoms per $\text{cm}^2$	46
2.5 Backscattering Yield from Bulk Targets	47
2.6 Applications to Elemental Targets	49
2.7 Applications to Compound Targets	55
2.8 Analysis of Mixtures	60
2.9 References	65

**3. CHANNELING***B. R. Appleton and G. Foti*

3.1	Introduction	69
3.2	Axial and Planar Half Angles	71
3.3	Estimates of Minimum Yield	74
3.4	Critical Angle and Minimum Yield (Diatomic Compounds)	76
3.5	Procedure for Obtaining a Random Spectrum	77
3.6	Crystal Overlaid with an Amorphous Layer	78
3.7	Disorder Evaluation (Surface Approximation)	79
3.8	Disorder Evaluation (General Case)	80
3.9	Lattice Location of Impurities	81
3.10	Alignment Procedures	82
3.11	References	84
3.12	Appendix	85

**4. SELECTED LOW ENERGY NUCLEAR REACTION DATA***L. C. Feldman and S. T. Picraux*

4.1	Introduction	112
4.2	Table of Most Used Reactions for Light Particle Detection	118
4.3	Table of Reactions for Profiling H and He Isotopes	120
4.4	Energy and Angular Dependence of Reaction Cross Sections with Notes for Analysis	122
4.5	Neutron Reactions	172
4.6	Elastic Scattering Cross Sections	176
4.7	( $p, \gamma$ ) Resonances	205
4.8	Kinematics	227
4.9	Miscellaneous	276
4.10	Examples	293

**5. ION INDUCED X-RAYS***I. V. Mitchell and J. F. Ziegler*

5.1	Introduction	313
5.2	Techniques	315
5.3	X-Ray Energies, Wavelengths, and Relative Intensities	324
5.4	Ion-Induced Ionization Cross Sections	378
5.5	Fluorescence Yield	425
5.6	Attenuation	428

**INDEX**
