Contents

Preface vii

CHAPTER 1 Introduction 1

CHAPTER 2 Experiments with Two Factors 5

Example 1: Bond Strength 5

The Eight Steps for Analysis of Effects 7

The Analytical Procedure 8

1. Calculate Effects 8

2. Make a Pareto Chart of Effects 11

3. Calculate the Standard Deviation of the Experiment, S_e 11

4. Calculate the Standard Deviation of the Effects, S_{eff} 13

5. Determine the t-Statistic 13

6. Calculate the Decision Limits and Determine the Effects 13

7. Graph Significant Effects 14

8. Model the Significant Effects 14

Review of the Experimental Procedure 16

Example 2: Water Absorption in Paper Stock 17

1. Calculate Effects 17

2. Make a Pareto Chart of Effects 19

3. Calculate the Standard Deviation of the Experiment, S_e 20

4. Calculate the Standard Deviation of the Effects, S_{eff} 20

5. Determine the t-Statistic 20

6. Calculate the Decision Limits and Determine the Effects 20

7. Graph Significant Effects 20

8. Model the Significant Effects 21

A Different Analytical Technique: The Spreadsheet Approach 21

Exercise 1: Coal-Processing Yield 23

Nonlinear Models 23

Exercise 2: Corrosion Study 25

CHAPTER 3 Experiments with Three Factors: 2^3 27

Example 3: Chemical-Processing Yield 27

Variation Analysis 31

Exercise 3: Ink Transfer 33

Analysis with Unreplicated Experiments 34

CHAPTER 4 Screening Designs 37

Example 4: An Eight-Run Plackett-Burman Design with Seven Factors	40
Reflection	46
Other Analytical Considerations	49
Exercise 4: Nail Pull Study	50
Twelve-Run Plackett-Burman	51
Example 5: Moldability Analysis	51
Exercise 5: The Lawn Fanatics	55
Even Larger Designs	57
Other Types of Designs	57

CHAPTER 5 Problems, Questions, and Review 59

Problems and Questions	59
Review of the Basics in Managing a DOE	61
What Inhibits Application of DOE?	62
Software	62
Appendix	63
Conclusion	63
References	63

Appendix 65

Table A.1: Table of t-Values for $\alpha = .05$ (95% confidence)	66
Table A.2: F-Table for $\alpha = .10$	67
Exercise 1: Coal-Processing Yield	68
Exercise 2: Corrosion Study	72
Exercise 3: Ink Transfer	76
Exercise 4: Nail Pull Study	81
Exercise 5: The Lawn Fanatics	85
Tables A.11 and A.12: Analysis Tables for 2^3 Factorial	90-91
Table A.13: Design Matrix for $\frac{1}{2}$ Fractional Factorial for Four Factors	92
Table A.14: Analysis Table for $\frac{1}{2}$ Fractional Factorial with Four Factors	93
Table A.15: Design Matrix for $\frac{1}{4}$ Fractional Factorial for Five Factors	94
Table A.16: Analysis Table for $\frac{1}{4}$ Fractional Factorial with Five Factors	95
Table A.17: Design Table for $\frac{1}{2}$ Fractional Factorial with Five Factors	96
Table A.18: Analysis Table for $\frac{1}{2}$ Fractional Factorial with Five Factors	97
Table A.19: Confounding Pattern for Eight-Run Plackett-Burman Design	98
Table A.20: Confounding Pattern for 16-Run Plackett-Burman Design	98
Table A.21: Analysis Table for Eight-Run Plackett-Burman Design	99
Table A.22: Analysis Table for Reflection of Eight-Run Plackett-Burman Design	100
Table A.23: Analysis Table for Eight-Run Plackett-Burman Design with Reflection	101
Tables A.24 and A.25: Analysis Tables for 12-Run Plackett-Burman Design	102-103
Table A.26: Analysis Table for 12-Run Plackett-Burman Design with Reflection	104
Table A.27: Analysis Table for 16-Run Plackett-Burman Design	105
Table A.28: Analysis Table for 16-Run Plackett-Burman Design with Reflection	106
Table A.29: Design Matrix for 20-Run Plackett-Burman	107

AN INTRODUCTION TO DESIGN of EXPERIMENTS A SIMPLIFIED APPROACH

LARRY B. BARRENTINE

A unique feature of the book is its step-by-step method that guides the reader through the development of experimental programs as well as identifying problems that one should be on the lookout for. Larry Barrentine has provided a useful, easy-to-follow introduction to statistical design of experiments.

— Ronald D. Snee
Management Consultant, Sleepy Hollow, NY

Design of Experiments (DOE) is the set of process improvement tools for studying more than one factor in a single experiment. Applying DOE to a process, therefore, can create tremendous cost and time savings as it tests several factors at once. Traditionally DOE has been performed by statisticians and those with a high degree of mathematical know-how. Now, however, anyone with basic mathematical skills can add this tool to his process improvement endeavors — in either a manufacturing or service setting.

By minimizing DOE's complicated math in favor of a logic approach, author Larry Barrentine has created an introductory book that simplifies the basic principles of DOE. Through his easy-to-read style and step-by-step organization, the author demonstrates that nearly anyone can adapt DOE to improve his processes.

Case studies and exercises guide you through the book and help evaluate your understanding before moving ahead to the next section. Practical examples illustrate the benefits of DOE and help you to apply what you've learned. A glossary of common DOE terms is included, making this one of the most thorough introductions to the basic tools of DOE.

ABOUT THE AUTHOR

Currently an independent consultant, Larry B. Barrentine has thirty-five years of experience in applying and managing statistical methods and process improvement at several companies. He is also the author of the book, *Concepts for R & R Studies* (ASQ Quality Press, 1991). Barrentine has taught at several universities and colleges in the United States and received a BS in mathematics from Delta State University. He also holds an MS in systems management from Florida Institute of Technology and an MS in statistics from Purdue University.
